The Volvo 850 Turbo Sedan.

Accolades like "If you like to grin from ear to ear or feel great gobs of turbo-torque pushing at your back when you step on it, this car delivers,"* may be routine for Germany's latest high performance machines.

But they're anything but routine for the latest family car from Sweden.

Yet such is the blistering performance of the new front-wheel drive Volvo 850 turbo sedan.

A ROCKET FOR THE NUCLEAR FAMILY.

Where an explosive 222-horsepower in-line five complements Volvo's usual arsenal of safety features.

And where Car and Driver, contemplating Volvo's traditionally mild-mannered stance, is moved to write:

"Is this like discovering the Pope guzzles Bud and has taken up bungee jumping?"***

Drive safely.

VOLVO

Fair reimbursement.
Increased clinical autonomy.
Less hassle.

A responsive leap in the right direction.

Without your help, healthcare is tagged for defeat.

Protect your future. Support Pennsylvania Physician Healthcare Plan*. A proposed statewide, physician-owned and controlled managed care organization dedicated to ensuring physician leadership in healthcare decision-making and delivery.

The Pennsylvania Medical Society, Pennsylvania Osteopathic Medical Association, Hospital Association of Pennsylvania and many of the state's county and speciality medical societies endorse the goals and/or concept of the Pennsylvania Physician Healthcare Plan†. Show your support by being a part of PPHP.

PPHP

Pennsylvania Physician
Healthcare Plan, Inc.

Act now. Call 1-800-671-7747 for information.

* PPHP is open to M.D.s, D.O.s, oral surgeons and podiatrists living and practicing in the state of Pennsylvania only.

† Exact language for each endorsement varies by organization. A current list of all PPHP endorsements is available for review upon request.

26 Medical Uses of the Internet

In this next in a series of articles on applications of personal computers for physicians, our specialist on medical computer networks explores some of the medical resources available on the Internet.

34 Nobody Knows the Trouble They See

Computers, code revisions, and patients' changing expectations have added a new level of complexity to the job of medical office manager. Here's advice from experienced managers on how you, as an employer of such a valuable person, can ease their plight and maximize their effectiveness.

18 Managing Medicaid: Community Plan Finding Success in Lancaster

After more than two years in development, the Lancaster Community Health Plan opened its phone lines this spring to Medicaid patients in need of a "medical home." Physician and community response has been overwhelmingly positive.

PENNSYLVANIA MEDICINE (ISSN 0031-4595) is published monthly by the Pennsylvania Medical Society, 777 East Park Drive, Harrisburg, PA 17111.

SUBSCRIPTIONS: \$25 per year—United States and Canada; \$35—all others. Single issues \$3.50 per copy prepaid; special issues cast mare.

POSTMASTER: Send address changes to PENNSYLVANIA MEDICINE, 777 East Park Drive, PO Box 8820, Harrisburg, PA 17105-8820. Second class postage paid at Harrisburg, PA 17105, and at additional mailing offices.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

STATE SOCIETY CLAIMS ANOTHER MEDICARE VICTORY: Xact Medicare Services is changing the way it reimburses for implantable devices as a result of efforts of the State Society and many individual physicians. Xact had announced that, beginning August 1, physicians must submit the FDA approval number, manufacturer's name, and model number for implantable devices used in select surgical or diagnostic procedures. Xact said it would reject any claims missing the information. The Society protested, citing the huge burden imposed on practices to collect the data and make billing software changes. As of August 21, Xact has stopped requiring the new information, and adjustments will be made to claims already filed. Xact says it will instead conduct random audits of physician records to look for abuses.

Pennsylvania physicians have received almost \$30 million to date as a result of another Society victory earlier this year challenging Medicaid payment practices for low-income elderly who are eligible for both Medicare and Medicaid.

COST-EFFECTIVE SOLUTION SOUGHT TO CAT FUND SURCHARGE:

Insurance Commissioner Linda S. Kaiser on September 1 notified basic medical malpractice insurance carriers of a Medical Professional Liability Catastrophic Loss (CAT) Fund shortfall. State Society leaders this summer met with John Reed, new director of the CAT Fund, and Kaiser to talk about the fund's critical problems and anticipated surcharge. In July, Kaiser alerted basic carriers to the possibility of an emergency surcharge of roughly 20 to 50 percent to cover a fund backlog, but the state Senate adjourned for summer recess without taking action on the related bill. Reed continues to seek an alternative to the emergency surcharge, and the Society is seeking introduction of a comprehensive tort reform bill which, it says, is the only realistic solution to the medical malpractice problem.

PACE SETS NEW CRITERIA FOR CARDIAC MEDICATIONS: Effective October 15, the Pennsylvania Department of Aging's Prospective Drug Utilization Review Program (PACE) will be using new criteria for approval of cardiac glycosides, calcium channel blockers, angiotensin converting enzyme inhibitors, and beta blockers. In some cases, the maximal dosages allowed by PACE are lower than those stated in the *Physicians' Desk Reference*. The Society has raised questions about these levels. Physicians whose patients may be adversely affected by these new rules are advised to document cases and send the information to the Society to support continuing efforts to revise PACE guidelines. Direct questions to the Society at (800) 228-7823 or (717) 558-7750, ext. 1459.

LANCASTER PLAN IS ONE OF 25 TO RECEIVE NATIONAL GRANT: The Lancaster Community Health Plan (LCHP), a managed care plan for Medicaid recipients in Lancaster County, is one of 25 local organizations nationwide chosen to receive grants averaging \$225,000 to improve the health of their communities. The 25 are expected to serve as models for the emerging health care delivery and financing system of the next century. A total of 283 organizations applied for the grant, which requires recipients to raise local matching funds equal to the amounts of their grants. For more on the May start-up of LCHP, see page 18.

WRITE TO US VIA THE INTERNET: The State Society has entered "cyberspace." Physicians connected to an online computer service can now send messages to Society headquarters via the Internet. Our new e-mail address is: stat@pamedsoc.org

AMA URGES GRASSROOTS PUBLICITY AGAINST TEEN USE OF TOBACCO: AMA President Lonnie R. Bristow, MD, in late August publicly applauded President Clinton's call for curbs on teen use of tobacco. "We are pleased that the president has recognized the danger tobacco poses to our children, and addressed the problem in a swift and serious manner," he said. The AMA urges county societies and individual physicians to help educate the public on a local level about the deadly effects of tobacco.

Preventing a Fall

John W. Mills, MD
Medical Editor

You all know the nursery rhyme about Humpty Dumpty: "...all the king's horses and all the king's men couldn't put Humpty together again." Since unification with the AMA five years ago, the Pennsylvania Medical Society has begun teetering, if you will, on an eroding wall of membership.

As a delegate on the floor of this Society's House at the time, I was convinced to vote for unification. I was sure the alliance would strengthen our profession's cause, other states would follow our lead, and we, while not invincible, would present a formidable front as a major player in the health care arena.

It wasn't in the cards, and now market forces are driving the system. It is now time for the Pennsylvania Medical Society to stand or fall on its own merit. We have problems peculiar to only our commonwealth that we must deal with on our own—for example, a constitutional amendment necessary to pave the way for true tort reform.

In July, your Society's board approved four very focused priorities. The Society's execution of those priorities will be stronger this year through reorganization and internal focus of resources. Streamlining the infrastructure of the Pennsylvania Medical Society is well under way. Executive Vice President Roger Mecum has realigned staff to deal more effectively with the priorities. A plan for realignment of House and board committees and councils will be laid before the board and House this fall.

These measures were drafted with much soul-searching and serious reflection on our future as a profession, and our ultimate responsibility to guide and support our patients in their quest for a healthy existence.

Bold moves are needed to stem our membership loss—the boldest being deunification with the AMA. We know unification isn't the only reason physicians drop out or don't join, but we are increasingly aware that it is a major one.

Better two-way communication with members should promote a resurgence of membership and a stronger State Society. We're initiating interactive communication—via e-mail, broadcast fax, electronic bulletin boards, and streamlined publications. Changes are being planned to enhance the attractiveness of the Leadership Conference to physicians and their families: The event has been moved to weekends for the next two years (April 19-21, 1996, and April 11-13, 1997) at the Lancaster Host and Conference Center.

We hope these efforts promote a State Society that can more effectively relate to the legislature, orchestrate a constitutional amendment for meaningful tort reform, and showcase Pennsylvania as a model of how it should be done by our profession.

A second bold move I believe is necessary to the State Society's survival and well-being is to abolish the membership "link" between the Society and its affiliate, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC). Since its inception, PMSLIC has been required to sell insurance only to State Society members. To be competitive in today's markets, PMSLIC needs the freedom to sell to all Pennsylvania physicians, as well as the freedom to pursue other insurance-related business. Our delegates can give PMSLIC the freedom to enhance its market position immeasurably, while remaining a closely tied affiliate with cross-over members. Nothing less can assure our common goals and still protect us against insurance market shenanigans.

There you have it—the House of Delegates, a.k.a. "all the king's horses and all the king's men," may not possess the power to put Humpty Dumpty together again, but this October they surely possess the power to prevent a fall.

Let me hasten to add that my analogy is in no way meant to be derogatory—I respect this Society for all it has done. Each year as I listen to the House debate the issues, I marvel at the process which in no small way reflects the way our country was founded by a diverse group of colonists with a common quest. ☺

DOCTORS MAKE BETTER JUDGES.

At The P-I-E Mutual, doctors rule. They sit on managing boards that consider new applicants. They form committees that review the merits of claims. Who knows better? And who cares more about controlling costs than people who themselves are paying premiums? Which helps explain why we can offer such attractive discounts to loss-free members. And how we've attracted more than 18,000 doctors, and become one of the largest medical professional liability monoline insurance companies in America.

Protecting Our Patients Under Managed Care

John H. Hobart, MD

For complete coverage and photos of Dr. Hobart's testimony, see pages 12-13.

I would like to begin this column by thanking the members of the House Insurance Committee for their kind reception of my recent testimony on House Bill 630, the Rural Patient Freedom of Choice measure. Members of the committee said the Society's testimony was one of the clearest presentations they had heard about the issues related to selective contracting.

I think that clarity reflects the fact that physicians, more than any other group, have reflected long and hard on the impact that selective contracting—what we in the old days called “any willing provider”—has had, or could have, on our patients.

In fact, the Society's formal testimony in July called selective contracting “an issue which has become almost the defining one for a profession worried that the bottom line of third-party payers is taking precedence over the health and well-being of our patients.”

I hasten to add that the testimony I presented to the Insurance Committee did not represent a new position for our Society. Our position remains clear and consistent: The Society does not support “any willing provider” in the sense that managed care organizations should be required to admit any physician who is willing to accept the payment and other terms. We believe there is a middle ground, and that patients will be best served if all parties work to find a solution that recognizes the legitimate concerns of both sides.

Now there's a big difference between “middle ground” and “middle of the road.” We are not advocating a “safe” position without controversy. We accept controversy for the sake of safeguarding our patients from the dangers of unregulated managed care organizations.

We also have some pretty direct recommendations for safeguards to protect patients from certain managed care organization policies. You may have occasion to personally speak to your legislators in the Pennsylvania House and Senate about this issue. If you do, I hope you will

take a few moments to highlight our recommendations for safeguards:

Adequate network—While managed care organizations may limit the number of participating physicians in their networks, they must ensure that the specialty and geographic distribution of their participating physicians is adequate to provide enrollees with access to quality care.

Rational criteria—Managed care organizations must evaluate a physician's professional qualifications through objective measures of competence and quality. Economic profiles must be adjusted to account for non-clinical management factors, and professionals must not be excluded because they are patient advocates or treat high-cost patients.

Due process—Excluded providers must be provided notice of the rationale for their exclusion and an opportunity to appeal their exclusion internally to the managed care organization and then to the Department of Health.

Physician input—Managed care organizations must implement a mechanism, similar to a self-governing hospital medical staff, for significant physician involvement in the development of network sizing limitations, credentialing criteria and processes, and other health care delivery policies.

Point-of-service option—HMOs and exclusive provider organizations must offer enrollees a point-of-service option that allows them to use out-of-network providers. Any out-of-network penalty should not exceed 20 percent of the allowance.

Disclosure—Any restrictions on choice of professional must be disclosed to prospective enrollees so that they can make an informed choice as to whether the restrictions are compatible with their needs.

Legislation such as House Bill 630 has elements of the safeguards we think need to be put in place to protect patients in a managed care environment. Our physician leaders and the Society's legislative staff continue to work hard for passage of a bill which embodies these concepts. ☐

Keep your practice in top financial health

The Midlantic Medical/Dental Banking Group was created to meet the unique needs of health care professionals. Whether you're in a new practice, an established one or buying into a group, we can help keep you financially fit. From securing a loan for new equipment, working capital or leasehold

improvements, to providing one-on-one consultations, our experts have the banking prescription you need. For more information and a free copy of "A Complete Financial Services Program for Health Care Professionals," call **1-800-633-0040** or **(908) 632-6545**.

MIDLANTIC®

Service. We didn't invent it. We're just trying to perfect it.™

LETTER TO THE EDITOR

FIGHTING THE GOOD FIGHT—AND WINNING

Congratulations to Dr. Phuong Wirth for his difficult achievement. He fought a good battle and won. When he mentioned Sussex County, New Jersey, I felt akin. As a boy, I crossed the Delaware and Neversink to pick strawberries in Sussex County for three cents a quart.

I wish to point out that when backed into a corner, retreat is not an option. It's either surrender or fight. Dr. Wirth did the latter.

Jack E. Cole, MD
Bethlehem

Dr. Wirth

Editor's note: Dr. Wirth is a 1995 graduate of the Philadelphia College of Osteopathic Medicine. His journey from Vietnam to America was featured in the July issue of PENNSYLVANIA MEDICINE ["Dream Come True Is Result of Hardship, Risk," page 33].

THE SEARCH IS ON

It's easy to talk about what's wrong with health care in the '90s. We read accounts of problems and opinions daily, telling us of cracks in the system, uncontrollable costs, and red tape. But the editors of PENNSYLVANIA MEDICINE remain optimistic that something must be "right" with '90s medicine, and we want your input.

Please limit each thought to one phrase or sentence, and mail or fax your thought or list of thoughts on "What's right with '90s medicine" to:

Managing Editor
PENNSYLVANIA MEDICINE
P.O. Box 8820
Harrisburg, PA 17105-8820
Fax: (717) 558-7840

Comments about the magazine and its contents, as well as viewpoints on current medical issues, are also encouraged. Letters should be typed or legibly handwritten, concise, and should not exceed 200 words. Please send to the managing editor at the address or fax number above. Letters are published at the discretion of the editors and are subject to editing.

Equipment Financing: More For Your Money With HPSC

A few of the benefits you can expect from HPSC:

1. Financing of new practices, equipment, leasehold improvements, working capital, merchandise contracts – plus computers and other office equipment.
2. Competitive fixed rates – no points, no variables, no hidden fees.
3. Quick response, phone or fax: up to \$125,000, 1 hour. Over \$125,000, all documents in place, 24-48 hours.
4. Options: deferred payment; no down payment; graduated payments up to 72 months; 10% or \$1 purchase option on equipment at end of lease.
5. Terms: 12 to 72 months. Lease or loan.
6. Easy add-on to existing lease as practice grows.
7. Financing of practice acquisitions up to 100% of purchase price at competitive rates (no points, variables or hidden fees).
8. All programs geared to cash flow. Tax benefits.
9. Funding, servicing of all contracts in-house.
10. Over 60,000 doctors financed since 1975.

Two Visiting Professorships and Medical Seminars in “OFFICE MANAGEMENT OF CARDIOVASCULAR DISEASE FOR THE GENERALIST”

The topics of these visiting professorships and medical seminars were chosen to emphasize the importance of office practice in the diagnosis and management of heart disease. The role of the primary care physician will be highlighted.

Tuesday, September 19, 1995

4:00 PM to 6:00 PM

Wednesday, September 20, 1995

8:30 AM to 3:30 PM

“TREATMENT OF HEART FAILURE”

Seminar Director: Allan B. Schwartz, M.D.
Course Director: Susan Brozena, M.D.

Visiting Professors:

Michael Bristow, M.D., Ph.D.
Professor of Medicine
University of Colorado School of Medicine
Denver, Colorado

Donna M. Mancini, M.D.
Assistant Professor of Medicine
Columbia University School of Medicine
New York, New York

Wednesday, December 6, 1995

8:30 AM to 3:30 PM

“CARDIAC AUSCULTATION”

Seminar Director: Allan B. Schwartz, M.D.
Course Co-Directors: Leonard S. Dreifus, M.D., Gerald Scharf, D.O.
Daniel Mason, M.D., John J. Ross, R.C.P.T.

Each participant will use an electronic stethophone to complement the clinical case presentations and state-of-the-art lectures on cardiac auscultation coordinated with demonstrations of echocardiography and color flow doppler.

These programs are being funded by an educational grant from:
THE EDNA G. KYNETT MEMORIAL FOUNDATION
This support is gratefully acknowledged.

Location: Classroom C (Alumni Hall), 2nd Floor College Bldg., 15th & Vine, between Race & Vine, Philadelphia, PA

Full Disclosure Statement: All faculty participating in continuing medical education programs sponsored by Medical College of Pennsylvania and Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. MCPHU designates each hour of attendance at these activities for 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

STATE SOCIETY SUPPORTS RURAL PATIENT ACCESS BILL

State Society President John H. Hobart, MD, on July 19 testified before the House Insurance Committee in support of a bill to prohibit discrimination in rural areas against patient access to providers of health care benefit plans. Members of the Pennsylvania Medical Society Alliance's Task Force on Health System Reform attended the hearing with Dr. Hobart.

House Bill 630, introduced by Representative David O. King (R-Mercer), amends the Insurance Company Law of 1921 for rural areas of Pennsylvania (all counties but Philadelphia, Allegheny, Montgomery, Delaware, and Bucks). Key provisions would:

- require health care payers who establish, operate, or maintain participating provider networks to not exclude providers from participation with limited exceptions;
- establish a credentialing process open to all providers in a geographic area and assure due process; and
- assure providers of input into a health care plan's medical policy.

Dr. Hobart outlined the Society's general position on selective contracting in his testimony. "The Society does not support 'any willing provider' in the sense that managed care organizations should be required to admit any physician who is willing to accept the payment and other terms," he said. "We believe there is a middle ground, and that patients will be best served if all parties work to find a solution that recognizes the legitimate concerns of both sides."

Among Society concerns with selective contracting are:

- 1) How it affects patient care.** Patients will be harmed if protections are not in place because

of the sometimes-limited availability of specialists and the paranoia instilled in physicians by third-party payer rules, and also because selective contracting can disrupt existing physician-patient relationships and ongoing therapies.

- 2) Claims by managed care organizations that they need to be able to exclude providers at their whim to hold costs down.** Dr. Hobart noted, "To date, [these organizations] have offered no credible, empirical evidence in support of their claims."

- 3) The idea that cost often precedes quality.** Quality patient care must have priority over insurer profits and exorbitant salaries and benefits for managed care administrators. As Dr. Hobart said, "If managed care organizations are truly concerned with quality patient care, they will take steps to ensure that their provider selection criteria and process result in correct decisions. Surely, if this is the case, they will have nothing to hide when their contracting practices are scrutinized."

The Society, which firmly believes that HMOs should be required to publicly explain why they exclude certain doctors from networks, supports implementation of several safeguards in its middle-ground position:

- The criteria used to determine if a provider is admitted to a network must be primarily based upon professional competence and quality of care, not the bottom line.
- Any economic criteria used in selecting providers for plans must have a demonstrated, positive relationship to professional competency and to quality and appropriateness of care.
- If managed care entities use economic criteria for determining admission to a provider network, they must adjust physician records

State Society President John H. Hobart, MD, told the House Insurance Committee in July that the Society supports a "middle ground" that recognizes the legitimate concerns of both sides of the selective contracting issue.

Representative David O. King (R-Mercer) introduced House Bill 630 to prohibit discrimination in rural areas against patient access to providers of health care benefit plans.

to account for factors which influence the amount and types of care a physician gives, such as the age and sex of patients, and the severity of their conditions. A recent survey of primary care physicians by researchers at Harvard Community Health Plan found that 75 percent of physicians considered to have an unacceptable number of referrals fell into the norm when adjustments were made for factors like severity of condition.

- While managed care organizations may limit the number of physicians in their network, they must ensure that the specialty and geographic distribution of their participating physicians is adequate to serve the medical needs of their enrollees.
- The criteria used to decide who gets into the network must be

Supporting Dr. Hobart's testimony were members of the Pennsylvania Medical Society Alliance's Task Force on Health System Reform, including (left to right): Jean Greca (Hazleton Branch), Eileen Plunda (Westmoreland County), and Eleanor Davis (Allegheny County).

disclosed to applicants and to current participating providers.

- When dropped from a network, providers must be given a reason for termination based on an unbiased review and have the right of appeal.

- Those not selected for the network must be given the reason for their non-selection and afforded the opportunity to reapply at some time in the future.

- Managed care organizations must give physicians the opportunity to help develop the criteria used to exclude providers and to contribute to other health care policies. Decisions on quality health care should be made by physicians, not accountants.

- Any limits on choice of provider must be disclosed to prospective enrollees so they can decide whether the restrictions are compatible with their needs.

- As a safety valve, HMOs must give people the opportunity to enroll in a point-of-service option which allows them to go out-of-network for their care. Out-of-network penalties must not exceed 20 percent of the allowance.

House Bill 630 has elements of these safeguards, Dr. Hobart told the House committee. He concluded, "We urge passage of a bill which embodies these concepts."

Members of the House committee responded positively to the Society's testimony. Democratic Chairman Nicholas Colafella (D-Beaver) said he appreciated examples given by Dr. Hobart of where HMOs are not working. Committee Chairman Nicholas Micozzie (R-Delaware) agreed, saying the hearings have brought the procedures of HMOs into question.

The Society continues to press for passage of House Bill 630 and managed care safeguard legislation in general.

Grassroots efforts

The Pennsylvania Medical Society Alliance and Mercer County physicians have been active in supporting House Bill 630 in Pennsylvania.

Members of the Alliance's Task Force on Health System Reform convened on July 19 in downtown Harrisburg to support Dr. Hobart's testimony. Their day began with a presentation and discussion with

Society lobbyists about important legislation in process. After hearing an update on House Bill 630, the group—led by Alliance Past President Judy Bucko—moved to the Capitol to hear Dr. Hobart's and other groups' testimony.

On May 18, Mercer County physicians spoke in support of House Bill 630 at the Health Insurance Committee hearing held in Mercer. Joseph T. Morelli, DO, a Stoneboro family practitioner, pleaded with state legislators to protect rural physicians. "We need some regulation, [and this bill is] a definite step in the right direction."

Joseph A. Giordano, MD, a Sharon internist and president elect of the Mercer County Medical Society, told the committee that the Blues have lost touch with physicians and patients, and threaten the well-being of both. He concluded the bill is needed to keep insurers from "controlling" the health care system, since they are setting themselves up as both provider and payer.

LEGISLATIVE UPDATE

NEW ACT 28 REPEALS CRIMES CODE

Governor Tom Ridge on July 6 signed into law House Bill 247—now Act 28 of 1995—which repeals the Crimes Code requirement that insurance claims be certified that the provider did provide the services for which reimbursement is requested.

The bill, sponsored by Representative Peter Zug (R-Lebanon), moved to the front burner early this summer when at least one insurance company in the commonwealth began requiring physicians to submit notarized statements with their claims, stating that the care being billed was, in fact, delivered by the physician.

Act 28 also provides certain protections for caregivers treating patients with advance directives, and addresses penalties for prostitution committed by persons who are knowingly HIV positive or infected with the AIDS virus.

LAW AND MEDICINE UPDATE

Physicians and the Hearing Impaired

Title III of the Americans with Disabilities Act (ADA) prohibits discrimination against deaf and hard-of-hearing individuals, among others, in public accommodations, including any "professional office of a health care provider." The Society's Office of General Counsel advises physicians to address communication issues with hearing-disabled patients on a case-by-case basis.

The ADA's goals are to attain effective communication and provide equal access to services for the disabled, however that may be accomplished. In other words, no individual with a disability may be excluded, denied services, segregated, or otherwise treated differently than other individuals because of the absence of auxiliary aids and services. Physicians are required to provide "reasonable accommodations" to the extent they foster these goals and do not pose an "undue burden" on the individual physician.

Undue burden has been defined as "significant difficulty or expense." Whether a particular accommodation poses an undue burden should be made on an individual basis, based on such factors as the overall financial resources of the office, the number of persons employed, the effect on expenses or resources, the impact of the action on the office's operations, and the availability and resources of any parent corporation.

The *ADA Handbook*, published by the Equal Employment Opportunity Commission and the Justice Department, states that a sign language interpreter need not be used where effective communication can be assured through the use of a notepad or computer keyboard. The requirement to provide auxiliary aids and services is flexible.

However, if a physician determines that a particular patient interaction requires the services of an interpreter, the physician must pay for the service and may not pass the charge on to the patient. Professional fees may reflect additional time, if any, expended in adequately addressing the medical needs of the patient with a disability. But in all but extreme cases—e.g., decisions regarding major surgery—written communication would meet the regulatory requirements of the act.

Catherine L. Schultz, paralegal, Society Office of General Counsel, contributed to this article.

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania and beyond.

This ongoing column updates Pennsylvania physicians on the state of managed care in the commonwealth and nation. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCo) at (800) 228-7823 or (717) 558-7750.

1 Blue Cross of Western Pennsylvania announced it will reduce premiums for its Special Care and Preferred Benefits Reduced plans, which serve about 32,000 low-income subscribers in the region whose incomes are too high to qualify for Medicaid, but too low to purchase traditional private health insurance. The company also anticipates premiums of its other nongroup plans will hold steady for the next year, if not decline. The rate reductions, which require state Insurance Department approval, are expected to take effect October 1. *[Pittsburgh Post Gazette]*

HealthAmerica, Western Pennsylvania's largest HMO, is looking to diversify. Among local acquisition targets: competitor Advantage Health. The company is also restructuring, laying off 88 people in Pittsburgh and intensifying its expansion into surrounding states. *[Pittsburgh Business Times]*

The University of Pittsburgh Medical Center has reduced staff and costs to remain competitive in the new managed care marketplace, according to the Hospital Council of Western Pennsylvania. In a council report, the medical center reported 800 fewer employees than it did last year. *[Pittsburgh Business Times]*

5 Hershey Foods Corporation has eliminated the option for employees to choose traditional indemnity health care coverage. Instead, employees are covered through commercial HMOs or the company's own managed care plan. *[Patriot News, Harrisburg]*

Three Central Pennsylvania HMOs—U.S. Healthcare, HealthAmerica, and Keystone Health Plan Central—have begun or are planning to enter Pennsylvania's workers' compensation market. But coordinated care organizations (CCOs)—licensed by the state and required to set grievance and quality assurance systems for patients—are concerned about the lack of regulation of such new networks. To date, 11 CCOs are approved in Pennsylvania. *[Central Penn Business Journal, Harrisburg]*

The state attorney general's office approved a merger between Harrisburg Hospital and Polyclinic Medical Center. The only condition of the merger? The new health system must cut costs by at least \$70 million over five years and pass on most of the savings to consumers or pay the difference. *[Patriot News, Harrisburg]*

6 A new health care organization of independent physicians is under development in Luzerne County. In August, area physicians were sent a prospectus offering shares in the newly forming Physicians Network of Luzerne County, which will allow physicians to practice independently, but still enjoy group benefits in negotiating contracts with health systems,

providing management services, and handling utilization review and quality assurance of health care services for physicians' patients. The network hoped to attract between 125 and 150 physicians with its stock offering, and to begin start-up operations this month.

7 Quakertown Community Hospital is planning to merge with St. Luke's Hospital, Bethlehem. Under the proposed plan, St. Luke's would assume control of the Quakertown facility, as well as its ancillary centers and services, five family medical practices, and an orthopedic group practice. The merger will need Federal Trade Commission and Justice Department approval. *[Philadelphia Business Journal]*

Michael Cardillo and Joseph Sebastianelli were promoted to share the duties of president of U.S. Healthcare, Blue Bell, according to Leonard Abramson, chairman and chief executive. Cardillo's background is in marketing; Sebastianelli has specialized in hospital contracting issues. Abramson says "their expertise is very complementary." *[Wall Street Journal]*

9 In response to members' requests to regain the control of patient care and physician participation in managed care, the Philadelphia County Medical Society (PCMS) is forming the Physician Association of Delaware Valley. The physician-owned organization, now in its funding stages, will encompass portions of the five-county, Southeastern Pennsylvania area. *[PCMS news release]*

► A 19-member Healthcare Steering Committee—comprised of health care providers and representatives of pharmaceutical companies, insurers, colleges, businesses, and governments in Southeastern Pennsylvania—has called on Governor Tom Ridge to designate the region as a managed care demonstration cite. Among committee goals:

1) improve the health care status of individual communities by enhancing coordination between public and private health care providers;

2) offer job placement and retraining resources for displaced hospital workers;

3) promote the region's health care services outside of the local market; and

4) provide financial and other incentives for voluntary hospital mergers, consolidations, and conversations to reduce excess hospital bed capacity.

The committee has requested state funding of \$50,000 to help fund start-up and \$100,000 for community health assessment studies, and would match the funds with \$175,000 of its own money. [*Philadelphia Business Journal*]

► Independence Blue Cross may continue to enforce its "prudent buyer policy" in new contracts, according to the state's Insurance Department; however, the department says it will continue to look for justification of this practice, closely monitoring the provision in each new contract submitted for department approval. The policy, which requires a hospital "to give its best rates to Blue Cross if a majority of the hospital's patients with private insurance are covered by Blue Cross plans," was under fire from competing insurers and area hospitals.

Among those objecting: Health Systems International, a Colorado-based HMO, which in early July announced a definitive agreement to acquire G.H. Holding Corporation and most of its for-profit subsidiaries—including Greater Atlantic Health Service, Inc.—from Graduate Health System for \$100 million in cash and notes.

[*Philadelphia Business Journal*; *Philadelphia Inquirer*; *Health Systems International news release*]

► In other news, Independence Blue Cross of Philadelphia has agreed

to pay the state of New Jersey \$1 million to resolve a lengthy investigation that determined the company was writing some small-group health coverage without proper authority. [*Philadelphia Business Journal*]

► Vanguard HealthCare Group, Inc., is establishing Omnia, Inc., a subsidiary of about 750 New Jersey and Philadelphia-area obstetricians and gynecologists, to provide comprehensive services to about 100,000 women in return for a fixed fee paid by HMOs. Vanguard says it can relieve HMOs of risk in such a network and use the effort "to bargain with HMOs." [*Philadelphia Inquirer*]

► Health Partners, a nonprofit HMO providing managed care to nearly 80,000 Medicaid recipients in North Philadelphia, has reported revenues of \$218 million for 1994, up 45 percent from 1993. All net income is reinvested into expanded programs and services, according to Barbara J. Plager, who heads the program founded in 1984 with a Robert Wood Johnson Foundation grant. [*Philadelphia Inquirer*]

► More than 50 employers across the country have joined in a program to push older retirees into Medicare-financed HMOs, which would relieve the companies of expensive obligations to provide health care coverage, and transfer the costs to the federal government. [*New York Times*]

► The United Way of Southeastern Pennsylvania early this summer organized a day-long forum for community organizations and health care providers to discuss "neighborhood-based" health care systems—making health and social programs and services available at a single, accessible location. Two such "family centers" are already established in Philadelphia. [*Philadelphia Daily News*]

► The University of Pennsylvania Health System and Presbyterian Medical Center have signed an agreement and plan of merger, effective July 1, 1995. Plans for the proposed merger were announced in April, and negotiations were finalized in June. Under the terms of the agreement, the medical center will be merged into the health system, which also includes the Hospital of the University of Pennsylvania, Penn's medical school, a 130-physician

primary care network, a management services organization, and several affiliated hospitals. [*University of Pennsylvania Medical Center press release*]

Facts, Figures, Etc.

• The Associated Press reports that a survey sponsored by the Robert Wood Johnson Foundation indicates that people in managed care plans had more complaints about their doctors than their counterparts in fee-for-service plans. The poll found that sick people with managed care coverage said they had to wait longer for doctor appointments and had more difficulty arranging to see specialists. [*AMA Electronic Network*]

• *Modern Healthcare's* annual Multi-Unit Providers Survey found that in 1994, not-for-profit health care systems (excluding public systems) saw a 3.5 percent decrease in operating income while investor-owned acute care systems saw a 16.1 percent increase in operating income. Not-for-profit executives attributed the decline in revenues to pressure from managed care, reduced government reimbursement, and an increased charity care load. [*AMA Electronic Network*]

• According to a KPMG Peat Marwick study of 1,300 hospitals, in 1993 hospitals in metropolitan areas with high managed care penetration had significantly lower lengths of stay than expected, while spending 11.5 percent less than the national average on discretionary hospital costs (costs not attributable to illness severity or cost of living). Hospitals in areas with low managed care penetration had higher-than-expected lengths of stay. [*Modern Healthcare*]

• A study by SMG Marketing Group found that as of May 1995, there were 430 integrated networks, defined as two or more facilities delivering services through a single organization, up from 255 in December 1994. Almost one-quarter of hospitals belong to networks, and hospitals have initiated 73 percent of the networks. [*Modern Healthcare*]

Managed care moves, state by state

• The National HMO Purchasing Coalition—comprised of 10 corporations nationwide—reports that it has "won 1996 rate cuts of more than five percent from managed health care plans." As reported in this

column in July, more than 100 HMOs bid for a contract to cover the coalition's 600,000 workers and dependents in 27 state and metropolitan areas, including Philadelphia. [*Philadelphia Inquirer*; *New York Times*]

- Attorneys for the Billings (Montana) Physician Hospital Alliance confirm that the PHO is under investigation by the Federal Trade Commission (FTC) for potential antitrust violations stemming from its fee-setting activities. A Danbury, Connecticut, PHO is also being investigated by the FTC for potential market monopolization. [*Modern Healthcare*]

- Kaiser Permanente continues to diversify its product offerings. After introducing a point-of-service option last year, Kaiser has introduced a PPO in California and Kansas City. In Southern California, Kaiser is also offering age-based rates on individual plans, a departure from its tradition of community rating. Kaiser's actions are the result of a declining market share and increased employer demand for

choice in health plans. [*Modern Healthcare*]

- Blue Cross of California is rewarding physicians who return workers' compensation patients to work within a given time period by paying a bonus of between 20 and 30 percent of the physician's fees. The bonus is awarded only if the patient remains at work for at least 90 consecutive work days with no more than a few absences related to the original injury. [*Managed Care*]

- Columbia/HCA has agreed to invest in Massachusetts' 500-bed MetroWest Medical Center. Also, the company has unveiled Health Advantage Network of Texas, a statewide provider network that will include 240 hospitals and thousands of physicians. Columbia, which owns 71 Texas hospitals, plans to use the network to contract with self-insured businesses and managed care plans, and intends to take the network concept nationwide in the next few years. [*Modern Healthcare*; *Houston Business Journal*]

- Blues plans in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and

Vermont have formed a regional alliance to offer a single point of contact, and uniform plans and services to self-insured employers. The alliance responds to the increasingly regional New England economy where employees often work and live in neighboring states. [*Modern Healthcare*]

- The Medical Society of the District of Columbia has settled its lawsuit with Blue Cross and Blue Shield of the National Capital Area over the process used to select providers for the Blues' closed-panel PPO. Approximately 4,000 physicians included in a predecessor open-panel PPO were excluded, based in part on a computer profiling system. Under the settlement, the Blues will establish quality improvement and credentialing committees that will include physician representatives, and will provide for notice and appeal for any physician excluded from the network. [*BNA Health Law Reporter*]

- United Healthcare is acquiring Metrahealth, a traditional health insurance company formed from the merger of Travelers and Metropolitan health insurance. [*New York Times*]

Full Disclosure Statement: All faculty participants in continuing medical education programs sponsored by The Medical College of Pennsylvania and Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. The Medical College of Pennsylvania and Hahnemann University designates 1.0 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association for each hour of attendance at these continuing medical education activities.

This program is eligible for 1.0 credit hour for each hour of attendance in Category 2A of the American Osteopathic Association.

Managing Medicaid: Community Plan Finding Success in Lancaster

Maria T. Montesano
Assistant Managing Editor

After more than two years in development, the Lancaster Community Health Plan on May 3 opened its phone lines to Medicaid patients in need of a "medical home." Now, four months later, physician and community response to this new managed care plan is overwhelmingly positive—and snags are few and far between.

Early in the Clintons' efforts to reform health care in the U.S. in 1992, the Lancaster City and County Medical Society convened a task force of health care providers and community leaders to consider how a national health plan would best work for Lancaster County. While the effort turned out to be what some called "a nice exercise in mental gymnastics," it also spurred the group to create what may well be the only community-based health system of its kind in the country for low-income families.

The Lancaster Community Health Plan (LCHP), a managed care plan operated for and funded through the Pennsylvania Department of Public Welfare (DPW), is a model for communities nationwide of how they can work together locally to solve a problem—in this case, how best to bring continuity of health care to Lancaster County's Medical Assistance (MA or Medicaid) population. At the heart and soul of the effort is Robert G. Doe, MD, an emergency physician who spearheaded the project from the start.

"We decided to start at the bottom of the pyramid where the system is most broken," Dr. Doe says, "where there is no continuity of care, and with a population known for using the ER for primary care and moving around to multiple doctors for same complaint. Our goal at that time was to implement some type of county-specific program to coordinate the MA population's health care." These days, though, the plan's objective is a little more specific: To ensure that every patient who is eligible for the plan has an appropriate

"medical home" and is not using services inappropriately in the community.

Elizabeth B. Pino, the plan's director of operations, estimates 26,000 of 33,000 Medicaid patients fall under the federal waiver which allows LCHP to operate. More than 16,000 patients were unassigned, 20 percent of whom have been signed up since LCHP enrollment began on May 1. She explains that five groups are excluded from the waiver, including: 1) people on Medicare, in nursing homes, and in mental retardation facilities; 2) people on "short-term benefits" through Medicaid; 3) foster children and those in subsidized adoption programs; 4) people who have misused the system; and 5) people on the state's blind pension fund.

Case management began June 1, and while Pino says it is hard this early in the game to judge client response to the plan—a survey is slated to begin before the end of the year—provider response speaks purely by the numbers. "Out of about 310 MA-providing primary care physicians in the county, we have 270 on our plan. It is pretty evident that they have been supportive of it." Further, the plan has 78 participating sites.

"The reason we've been able to get heavy participation is because the providers have recognized the opportunity to get involved in a community-based project," Dr. Doe says. "There is not a whole lot, financially, in this initial phase, for the family doctor, or in particular for the specialists, who get no additional money out of this program. But there is the potential for the plan to move into an insured, privatized basis, and physicians are excited to see a Medicaid program that eliminates the bureaucracy that they've been having to deal with over the years."

✧ How the plan works ✧

Under the county waiver, Medicaid recipients have their choice of plans and providers. After DPW processes recipients' reapplications for Medicaid benefits, recipients have 30 days to choose between

the primary care case management plan offered through LCHP and the Mercy Health System health maintenance organization. If 30 days go by and they have not enrolled in another HMO, they are automatically enrolled with LCHP. Clients then choose a participating provider—a medical home.

Pino says she doesn't see this process as a competition between the two plans for patients. "There is a market, and we are both in the marketplace, but these are two very different plans," she says. "The Lancaster Plan is not risk assuming. We don't pay capitated fees to our providers. Instead, the providers get fee-for-service from the state. We've caused very little change in how the physicians take care of their patients and how they file claims. We see ourselves as more of a facilitator and advocate for the Medical Assistance population, as opposed to a for-profit HMO."

Staff members at LCHP include three client service representatives, who work with the data and with patients on the phone to sign them up for the plan and connect them with providers. These representatives process information for between 300 and 450 clients per day, transmitted through a computer linked to DPW. They also serve as liaisons for LCHP clients, who are each assigned a representative to provide continuity of service as well. All three client service representatives are bilingual.

Other staff members include a provider service representative—who, at this time, spends much of his time recruiting physicians and facilities for the plan—and an administrative assistant. Pino and Executive Director Robert E. Lee round out the plan's staff.

✧ Community support ✧

Lee is on loan from the Community Hospital of Lancaster, where he serves as vice president of marketing and planning. His employer and other area hospitals and businesses have lent resources and support to the plan. In fact, the community support has greatly added to the early success of the plan, Lee says. "Hospitals donated secretarial support and a portion of start-up monies; legal, accounting, and printing services were donated; and even the building space and office furniture were given to us by members of Lancaster's business community."

Community involvement is also apparent in the make-up of LCHP's board of directors. In addition to three physicians, a dentist, and six hospital workers, the board includes representatives from the

county assistance office, the county mental health/mental retardation office, a local pharmacy, and local insurance offices, as well as a lawyer, two legislators, and two community action advocates.

Also, the plan has developed two advisory committees—the Physician Advisory Committee and the Consumer Advisory Committee. Each makes suggestions and counsels the plan on how best to reach the physicians and clients.

"Lancaster County, in and of itself, is a community that accepts its own challenges and has a tradition in that," Pino says. "I think that plays a large part in why the Lancaster Community Health Plan exists...In my eyes, this project has mobilized the community."

Still, any start-up brings some challenges.

✧ Early challenges ✧

Aside from working through some glitches early on with the administrative computer system used to enroll clients, and dealing with confidentiality issues related to the transfer of electronic information through the Community Patient Information Network (CPIN), the plan's sister corporation which will link the medical record information of its clients, the early days have been relatively snag-free.

"There's been a lot of thinking and planning in putting these systems together," says Lee. "We are very pleased with how things are going from a system standpoint. But," he admits, "there certainly are challenges."

According to Pino, the biggest challenge is education—educating the clients about how managed care works, and educating the providers about the plan's relationship with the state and how that works. She says, "The challenge is actually the objective."

Pino explains, "One of the things that physicians must agree to when they enroll with LCHP is 24-hour access to their clients—whether by phone or in their office. Some of the clinics in the past have not had that option, and their patients would have to use emergency services after hours. Our first priority is to educate the providers that this particular group of people may not have had open access before; consequently, they may not know how to use it. Then we must educate LCHP clients about when to phone their physician and what is a true emergency...so it's education on both sides."

"That's really where our advisory committees help us," Lee adds "Though part of their purpose is to counsel us, they also help

"The biggest challenge is education—educating the clients about how managed care works, and educating the providers about the plan's relationship with the state and how that works."

us educate physicians, office staffs, clients, and others who are involved with the plan."

Other obvious challenges in any new health system are controlling costs and quality. In the June 30, 1995, issue of the *Central Penn Business Journal*, DPW Secretary Feather Houston is quoted as saying that managed care "is not the big-time savings some people talk about." It does not change the increasing number of people who are eligible for Medicaid, and there is no managed care that covers nursing home costs.

Pino agrees, to an extent: "That is true in that, no, managed care does not stop people from enrolling in Medical Assistance," she says. "But that is not what managed care was ever charged with in my mind. I do believe there are savings involved in managed care, and I think that is what we are here to show—that if you can connect people with the appropriate service and the appropriate medical home, and educate them at the same time,

you have a smarter consumer, whether it be a consumer of private health care or a consumer of assisted health care." Lee adds, "Our philosophy is to manage the care and thereby manage the cost, not manage the cost and then the care."

Rarely, these days, do we talk about cost without quality, and LCHP has that covered as well. LCHP-participating physicians are all credentialed to provide care under MA through the state. "They have to first be approved by the state to provide services to MA clients and then they send a supplemental agreement to participate in our plan," says Pino.

But more importantly, she says, "As far as overall quality is concerned, any time you can increase access to health care, by default you have increased quality for the consumer. They now have access to something they didn't before."

✧ Future efforts ✧

So what's next for the Lancaster Plan? "We have a lot of work to do," Lee says. Operationally, the CPIN system is in development and will soon be up and running.

Coordination with other community programs, such as school-based health centers which are reaching beyond the Medicaid population, are a priority as well. And Pino sees the possibility of the plan going beyond health care to more social issues, since, she says, "There are a lot of human-service-type issues that affect whether or not someone goes on Medical Assistance."

But initially, according to Lee, "We want to do a bang-up job with this opportunity we were given by

the state and by the community. We're actually helping to change the way care is delivered to the Medical Assistance population. That is not going to happen in a couple of months or even a year. We have some time, and we want to remain open minded. For instance, might we take what we learned and try to expand it to the underinsured?"

As for the federal government's allusions to a Medicaid block grant for states, Dr. Doe is a strong supporter. "From the be-

ginning, we've known the Medicaid system was a very difficult system for doctors to interact with—paperwork, billing, rules and regulations. We thought, wouldn't it be nice as part of the program to organize a system that could eventually be capitated—having a global payment coming to the county to take care of the MA population in a much more efficiently coordinated fashion. A block grant would help us realize that part of our dream...If we were to be given such a grant, working in conjunction with a willing, fiscally responsible insurer, we could manage that population within a fixed budget."

But Lee is a bit more cautious. "Who knows if that is going to happen," he says. "We are just hoping to build on whatever comes. We want to be flexible enough that, if the government did institute block grants, we would be able to make an easy transition to something that would continue to be beneficial to the community...Honestly, it is unclear what's next, [but] we believe we are positioned well and that the possibilities for improvement are unlimited." ○

"This program shows that physicians have within their grasp the ability to affect the health system in their communities if they step up to the plate and do so."

—Robert G. Doe, MD

The Heart Center for Children

We are pleased to announce that St. Christopher's Hospital for Children is the new home of the Heart Center for Children, a comprehensive, multidisciplinary program that brings together some of the Delaware Valley's most experienced and renowned specialists in pediatric cardiology and cardiothoracic surgery. The Heart Center for Children provides cardiac catheterization (diagnostic and therapeutic), cardiac electrophysiology, cardiothoracic surgery, cardiac transplantation and fetal echocardiography.

ACTIONS OF THE BOARD OF TRUSTEES, JULY 11-12, 1995

BOARD SETS STAGE FOR STRATEGIC CHANGES

Delegates to the Society's 1995 House this fall will have before them a slate for major changes in Pennsylvania's largest physician organization. Derived from a process begun by the board nearly a year ago, the recommendations to strengthen the Society's focus and structure are actually beginning steps in an ongoing revitalization plan.

Underpinning each stage in the Society's new strategy, called the "Membership Driven Process" or "MDP," is research. A combination of surveys, focus groups, analysis of numerous data sources, and tracking of existing communications practices contribute to the process. Steering the research and discussion is the MDP Review Panel, which in turn reports its findings and recommendations to the Society's board.

Listening to members

The MDP Review Panel advised the board at its July meeting to trim the Society's annual roster of six or more broad priorities to four more highly focused issues of importance to Pennsylvania physicians. "The work of this panel over the last three months has been primarily to identify and prioritize key, focused issues important to physicians in this state," said the panel's Acting Chair Charles Cutler, MD.

Key to the panel's findings was a detailed telephone survey which revealed physicians' agreement—members and nonmembers alike—with the urgency of four major issues:

- *Managed care advocacy:* Assuring patient access to doctors and doctor access to patients, minimizing interference in medical decision making, and seeking appropriate reimbursement for services rendered.
- *Tort reform and other important legislation:* Developing a strategy that will create opportunities for meaningful legislative action, and lessen the impact of professional liability concerns in medical decision making.

- *Communication of the Society's value to Pennsylvania physicians:* Enhancing the Society's communications to physicians about

what the Society is doing on the profession's and patient's behalf, and supporting the development of proactive local leadership to advocate for the Society both to grassroots physicians and to the media.

- *Membership recruitment and retention:* Focusing efforts on recruitment of young physicians.

Dr. Cutler told the board, "The reaction to the Society's effort to garner physician opinions and concerns was extremely positive..." He said that the work of the panel will allow Society leaders to position the organization "on the cutting edge of innovation."

Several studies reviewed by the panel indicated that physicians are very concerned about the wide-ranging impact of managed care on the practice of medicine. Because of these strong concerns, the panel identified managed care as an area requiring ongoing monitoring, research, and Society actions.

Medical malpractice/liability reform remains one of the most important concerns of practicing physicians, especially to young physicians.

The panel recommended that the Society develop an incremental plan to achieve success on the issue of tort reform by:

- developing a sound strategy that will create new opportunities for reform of the medical malpractice system in the commonwealth, and
- lessening the expressed physician anxiety over liability interference in the day-to-day practice of medicine.

The panel also pointed to recruitment and retention, and specifically recruitment of young physicians, as requiring the continued strong commitment of Society resources.

The issue of continued State Society unification with the AMA was addressed by the panel's research, as it relates to membership recruitment and retention. Of members, 55 percent disagreed with the unification requirement, and of nonmembers, 93 percent disagreed. The panel reported that the data available at this time strongly supports deunification.

PMSLIC's membership requirement

The House of Delegates in October will consider a recommendation by

the board to permit the Society's largest subsidiary, the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), to write professional liability insurance for physicians who are not members.

In response to changes in the medical marketplace—formation of group practices, sale of practices, and creation of new structures such as IPAs, POs, etc.—the State Society has instituted a variety of alternative membership categories, dues structures, and incentive programs. However, market pressures are accelerating beyond these efforts, PMSLIC leaders told the Society's board in explaining their request that membership no longer be a requirement for insurance.

The resulting recommendation includes a joint commitment of both the Society and PMSLIC to develop, in concert with the county societies, a plan to minimize any potential negative impact on the State Society and the county societies. This plan will be considered and acted upon by the board in September.

Selective contracting

To help educate physicians in what to look for in physician hospital organization (PHO) agreements, as well as empower them in the changing health care marketplace, the Ad Hoc Committee on Selective Contracting is recommending that the House adopt the following policy, approved by the Society's board in July:

- Hospitals should not deny, restrict, revoke, or terminate the medical staff membership or clinical privileges of physicians on the basis that the physicians did not participate in the hospitals' PHOs.

- PHOs should not deprive physicians of the right to separately contract with managed care organizations or other third-party insurance entities, except when the PHO is negotiating with those entities on behalf of physician and hospital services.

- PHOs should not restrict physicians who have clinical privileges at more than one hospital from joining other PHOs.

- Physicians should own the physician component of the PHO contract.

Physicians Should Beware of Medicare Secondary Payer Laws

(Note: The following information was provided to the AMA by the Society of Professional Benefit Administrators.)

As medical providers begin to establish and administer their own health plans, they need to keep in mind that health plans are subject to a wide variety of federal and state laws and regulations that carry heavy penalties if violated. One set of laws that has troubled group health plans for years is the Medicare Secondary Payer laws (known as MSP laws).

Health plans potentially are facing claims as high as hundreds of thousands of dollars, incurred years ago, that the health plans were not aware of because Medicare incorrectly kept the claims and paid them. Now Medicare is attempting to recoup their money. Some government officials have argued that Medicare is owed billions.

A series of laws was passed during the 1980s that made Medicare a secondary payer to private-sector employer group health plans. As the laws were passed, the Health Care Financing Administration (HCFA) failed to work with Congress to achieve necessary clarifications. The consequence was that many people—including doctors, hospitals, Medicare beneficiaries, and employers—didn't fully understand how to comply. Many still don't today.

HCFA is very proud of the fact that it launched an educational campaign in 1987 to tell doctors and hospitals about the MSP laws. But the laws took effect as early as 1982. HCFA's efforts were too little, too late; and employers, plans, and now integrated medical entities will have to pay the price for HCFA's failings.

Government studies in the late '80s revealed that the MSP program was not generating the anticipated savings from employers' group health plans. Some government officials claimed that Medicare was owed as much as \$10 billion; others claimed that these amounts were greatly overestimated. Congress felt pressure to do something to recoup the money—so

***Editor's note:** Xact Medicare Services, the commonwealth's Medicare carrier, is in the process of preparing physician and beneficiary overpayment letters requesting a refund of Medicare monies Xact believes were paid in error under MSP rules. The State Society continues to follow this issue. Look for an update next month in PENNSYLVANIA MEDICINE.*

the "Data Match" program was passed.

This program authorizes the Internal Revenue Service and the Social Security Administration to share information with Medicare on individuals who were working during times when Medicare was making payments on these individuals. The names of these individuals are placed on a form and sent to employers for verification and to determine if these people were covered under the employer's group health plan.

Most MSP violations occur because a doctor or hospital mistakenly sends a claim bill to Medicare when it should have been sent to the employer group health plan, or because the doctor or hospital bills both Medicare and the employer group health plan. A Government Accounting Office study based on a sample of 88 hospitals determined that 64 percent of all MSP recovery cases were situations in which the group health plan had correctly paid primary and Medicare had incorrectly paid primary (i.e., double billing).

HCFA, desperate to recover monies that the Office of Management and Budget says it should not have paid out, attempts to bully plans into paying. HCFA believes that it has the right to obtain a duplicate payment from an employer group health plan and forces plans to pay the same claim

twice—once to the medical provider and a second payment to reimburse HCFA for incorrectly paying the same medical provider for the same claim that the employer group health plan paid.

Not only can the government agency demand that an employer pay Medicare for its own goof, but HCFA also can send employers to the IRS for imposition of a penalty tax, equal to 25 percent of an entire employer's contributions to the group health plan for the year, in addition to suing for double damages. When employers will be referred to the IRS is unknown; neither HCFA nor the IRS have issued formal guidance.

However, in an informal letter, one of HCFA's directors said the administration would refer employers to the IRS unless they could implement procedures to ensure that an MSP violation would not occur in the future. This condition is impossible to satisfy since employers have no control over what their employees tell their doctors about their group health coverage.

Medical providers who are establishing their own plans should be aware that if an MSP error occurred in one of their plans, HCFA is far more likely to be harsher on you because the payment function is so closely allied with the provider function. HCFA will argue that your left hand should have known what your right hand was doing.

STILL TIME TO RESPOND TO HCFA RULE ON MEDICARE

Interested parties have until September 26 to review and comment to HCFA on the proposed rule for changes to the 1996 Medicare fee schedule. Mail written comments (one original and three copies) to HCFA, Department of Health and Human Services, Attention BPD-827-P, P.O. Box 7519, Baltimore, MD 21207-0519. Policy changes affecting payment for physician services include:

- Medicare payment for physician services in teaching settings,
- changes in calculating the default Medicare volume performance standard beginning in 1996, and
- implementation of the statutory requirement in the Society Security Act Amendments of 1994 to develop a resource-based system for practice expenses.

STUDY RESULTS AVAILABLE FREE TO PHYSICIANS

During the past few months, the Society's Center for Professional Drug Education and Information has been targeting antidepressant drugs for educational purposes. The incidence of depression and its treatment are of concern to the medical community because depression lessens the quality of life for patients and is responsible for increased cost to society when treatment fails.

As part of our educational outreach, the Center is making available a study by Jeffrey S. McCombs, PhD, et al., published in the *Journal of Clinical Psychiatry* (51:6[Suppl], 1990), that addressed two questions:

1) What proportion of patients with major depressive disorders (MDD) fail drug therapy using existing antidepressants?

2) What are the direct cost effects of MDD treatment failure?

To briefly summarize, the data for the study were obtained from the California Medicaid program and involved a five percent random sample of recipients on antidepressant therapy. Findings include:

- Maximum treatment success rate for MDD patients was 21.5 percent;
- 54.1 percent of outcomes for patients on new episodes of antidepressant therapy was classified as uncertain; and
- 29.8 percent of the patients never received a dosage above the minimum level for MDD.

The conclusions drawn by the authors are:

- As many as two-thirds of patients being treated with antidepressants are really being treated for conditions other than depression, or they are being dosed suboptimally for numerous other reasons.

- Treatment failure costs society approximately \$1,000 per recipient for additional health care services the first year.

- The bulk of the additional costs are concentrated in the first six months and reflect in-hospital services.

A copy of this study is available to physicians at no cost. To obtain your copy, or to be placed on our mailing list to receive other valuable information, please call the Center for Professional Drug Education and Information at (800) 228-7823.

NEW PROGRAM TARGETS H₂ ANTAGONISTS

The Pennsylvania Department of Public Welfare (DPW) is beginning a new drug pre-authorization program primarily for H₂ antagonists.

According to preliminary discussions with the department, acute dosages of these drugs will need to be preapproved in two situations:

1) A physician must obtain prior approval in order to prescribe an acute dosage for more than 90 days, including the original prescription and up to five refills or six months, whichever occurs sooner.

2) A physician must obtain prior approval to have a patient on two H₂ antagonists, even if one was prescribed by another physician. (An alert to this situation would come from the pharmacist filling the prescription.)

This summer the Society met with DPW to outline concerns and issues for consideration as the department finalized its guidelines and criteria for the program. Also, the Society is seeking to review physician education material in advance of distribution. Look for updates in Society publications as this program develops.

Your Comments Are Welcomed

The Society's Center for Professional Drug Education and Information welcomes your questions and comments about issues relating to prescribing, drug interactions, or specific pharmaceuticals. Use this form to fax your questions and/or comments.

Medical Uses of the Internet

Fred D. Baldwin

Unless you've spent the last couple of years in Antarctica or maybe Ulan Bator, you've been reading a lot about the Internet. All the hype and hoopla may leave you wondering whether the Internet will be useful for you. The answer is somewhere between "probably" and an unqualified "yes," depending on whether your perspective is short term or long term. This article, one of a series on applications of personal computers for physicians, describes some of the resources available on the Internet.

Lee Hancock, an educational technologist at the University of Kansas Medical Center, Kansas City, recalls, "About five years ago, I was given an e-mail address. I had no idea what it was for. Since I worked for the medical center, I figured a good way to use this thing would be to find out what was out there for the medical community. I spent three months generating a two-page list of resources."

Having compiled his two-page list, Hancock posted a note on an Internet bulletin board saying that he'd mail it out for the asking. He was, he says, "flooded with responses." Fortunately, other medical school communication sites agreed to handle electronically what came to be known simply as "The Internet Health Science Resources List," which comes as close as humanly possible to being comprehensive. (A subset of the list, known as "The Medical List," contains only sources of clinical information.) Hancock produces these lists in concert with Gary Malet, MD, whose practice is in California.

"I just kept updating it, and things kept growing," Hancock says. "When I last printed it out a year

ago, it was 225 pages long in 12-point type. It's now probably twice that."

Hancock is now an internationally recognized expert on medical uses of the information superhighway, and he's authored a book, *Physician's Guide to the Internet*, scheduled for publication by Lippencott-Raven this September. His experience provides an indicator of how medical interest in the Internet has burgeoned in recent years.

Technically, if you've ever sent a message by electronic mail (e-mail) from a university-based computer or from one commercial electronic network to another (for example, from CompuServe to America Online), you've already used the Internet. The Internet itself isn't a separate service or legal entity; it's the sum of over 20,000 computer-based networks that collectively are thought to connect 30 million individual users. It's growing incredibly fast; one growth rate estimate, by no means the largest, is 80 percent per year. It provides a pathway to many medical resources, perhaps the most important of which are online exchanges of information among researchers and specialists.

E-mail, says Hancock, is the simplest, most basic use for the Internet and your point of entry for exploiting more sophisticated resources.

"You can consult with colleagues worldwide or with your patients," he says. "We have people here using America Online and Prodigy to talk with patients in rural Kansas. And it's a way to get out of isolation, especially for a small practice in a relatively small town with few real colleagues to keep up with what's going on. You get the latest treatment information from places like CancerNet, which provides Physicians Data Query, updated monthly for cancer treatments."

"The Internet itself isn't a separate service or legal entity; it's the sum of over 20,000 computer-based networks..."

Mr. Baldwin is a Carlisle-based freelance writer and co-author of *Infomedicine: A Consumer's Guide to the Latest Medical Research, to be published by Little, Brown & Co. in 1996.*

The advantages of e-mail include speed and convenience. If you don't need to talk to someone immediately, you can skip being put on hold and playing telephone tag. Your notes arrive in your correspondents' mailboxes almost instantaneously; when they're actually read depends on how often recipients check their mail.

From e-mail it's a short, natural step to asking to join any of many hundreds of mailing lists that serve as forums for people with special interests, ranging from common medical problems like breast cancer to relatively esoteric professional specialties like forensic medicine. One example of interest to many physicians is Fam-Med, an e-mail discussion list focusing on uses of computer and telecommunications technology in the teaching and practice of family medicine. This list is owned and maintained by Paul Kleeburg, MD, a family practitioner from St. Peter, Minnesota. (See sidebar at right for details.)

Most Internet lists are open to anyone—although those who maintain them can block mail from advertisers and cranks—but some, on sensitive topics like child abuse, will require you to provide appropriate credentials. Many lists, although maintained by and for physicians, provide forums for exchange of views on nonclinical issues like HMOs and other health care delivery systems, computer software for doctors, and legal, political, and financial matters.

Lists like these are, in effect, electronic bulletin boards, although the term "bulletin board service" or "BBS" typically refers to a privately maintained, multi-function list reachable by direct dial, such as the Black Bag BBS described in the March issue of *PENNSYLVANIA MEDICINE*. They are often called "listserv" lists. Technically, a listserv is one of several similar types of mail-distribution programs used by universities and other groups maintaining Internet mailing addresses, but it seems on the way toward becoming the generic term for all such programs.

Getting on (and off) a list is easy. Typically, when you join one, you'll be content to be a passive "lurker" for a few days or weeks, merely skimming through message headings to decide if the postings interest you. If they do, you'll sooner or later find yourself sending e-mail messages, either questions or comments, "to the list," which means that they'll be publicly posted. Those who read your messages will have the option of posting public replies or replying to you separately, depending on whether they judge the communication likely to be of general interest.

Two cautions are in order. First, getting information from the Internet can be like drinking from a fire hose, so you should take care not to sign up for more than one or two lists at once, at least until you know how useful they are. On some lists, you can get as many as 50 e-mail messages a day. Although you'll become as adept at hitting the DELETE key as you are now at tossing out junk mail unopened, you'll want to be selective.

Second, don't assume that Internet lists, even restricted ones, guarantee the same level of privacy as telephone conversations. Use common sense in mentioning patient names or anything else that could jeopardize confidentiality.

Internet connections (planned as the subject of a later article) were once difficult for physicians not affiliated with universities or teaching hospitals. They're getting both cheaper—as low as \$10 per month for some services, but typically more like \$20 per month—and easier to use. As a rule, you no longer have to type in commands, but can use a computer mouse to "point-and-click" at the application you want.

The future of Internet communications lies with tools like World Wide Web (WWW or, increasingly, just Web), which permits intuitive searches and extensive use of graphics. If you need to send and receive graphics now, for example, to exchange X-rays with colleagues, you'll want a personal computer no more than about three years old and a fast modem (14.4 bits per second or faster) to avoid molasses-slow transmissions. For simple text messages, almost any personal computer with a modem will be adequate.

Hancock believes your e-mail contacts on the Internet will lead you "deeper and deeper as people post 'Guess-what-I've-found!' messages." And the need to go deeper may be spurred by patients who know how to tap search online for really current medical information.

"It's better than reading journals because it's real people-to-people contact," says Hancock. "Beyond that, CancerNet and PDQ are available for patients and include information in nontechnical language. Patients are talking by e-mail to other patients who are suffering from the same thing. They're going to start coming in and telling physicians, 'This is what I found online.' And if the physician is only reading journals that are a few months old, and CancerNet is updated every month and is peer-reviewed, some patients are going to know more than the physician about the treatment of their disease." ☉

Connecting to Clinical Resources

For those already connected to the Internet, both the Internet Health Science Resources List and the Medical List (of clinical resources only) are available for downloading from ftp2.cc.ukans.edu. Go to a directory called *pub/hmatrix* and look for a file called *medlist.[version number].txt* or (for the larger list) *medlist[version number].zip*.

The Web address for the Internet Health Science Resources list and many other medical resources is <http://debra.dgbt.doc.ca/~mike/healinet>. This text file is about one megabyte long, so you may want the compressed version. (The ".zip" that ends an address means that file is compressed.) Downloading a file of this size can be expensive; try off-hours copying to a floppy disk at a medical school library, or scanning the lists online and downloading only the parts that interest you.

Fam-Med, mentioned in the article, comes in two flavors: an unmoderated list in which all messages are immediately distributed to the subscribers and a Digest in which messages from the unmoderated list are screened, inappropriate ones removed, and the remainder strung together and sent out about twice a week. To receive unmoderated mailings, send a one-line e-mail message to listproc@gac.edu with the body reading: *subscribe fam-med [your name, but without brackets]*.

You can also explore or retrieve files from Fam-Med using anonymous FTP (an Internet tool for file retrieval); FTP to ftp.gac.edu. If you have WWW access, the address is URL: [GOPHER://ftp.gac.edu:70/11/pub/fam-med](http://ftp.gac.edu:70/11/pub/fam-med).

For more information about Fam-Med in general, try URL: <http://apollo.gac.edu/>.

Celebrating Ten Years of KePRO

Donald E. Harrop, MD

Well, we made it. On July 1, 1995, we celebrated KePRO's tenth anniversary. While I can honestly say that I have thoroughly enjoyed all of my involvement in the organization during the past 10 years, I can't say it's been nothing but good times—we've had our share of trials and tribulations along the way.

I sure remember the early days of KePRO and the PRO program, when we were still learning how to deal with the bureaucracy and at the same time trying to get the organization up and running. Unfortunately, because the PRO program was so new, the Health Care Financing Administration (HCFA) was also in a learning curve, and I think even the people who ran HCFA in those days would now admit to a few mistakes.

Our most difficult task from the first day of operation was to try to convince physicians and hospitals that our intent was to conduct fair and honest review. Senior staff traveled across the state to meet with medical staff representatives and hospital administrators to explain what our process would be, and to attempt to alleviate some fears and squelch the rumors about the

program. It took some time, but I think we made great progress.

For this type of program, which was basically punitive in nature at the start, I think we gained the trust of the great majority of hospitals within the first few years. In fact, this is now being proven with the success of our cooperative projects.

Among the physicians, I think there has been a variety of mixed feelings. In some cases there is still mistrust. In others there is respect. The physicians knew that once the program became law, some group would become the PRO, and it was better if it was a physician-controlled organization. Many also realized that those of us on the board of directors were subject to criticism, but accepted the responsibility because we felt we were doing the best we could for the practice of medicine.

So here we are a decade later and much more comfortable with the new direction the program is taking. However, as on any government program, it seems that whenever there is reason for celebration, there are always other issues to dampen enthusiasm.

The reduction in review volumes which followed the shift from individual case review to the Health Care Quality Improvement Program (HCQIP) meant another workforce reduction, as when we closed our area offices a few years ago. Some had been with KePRO a number of years and had worked very hard to make us one of the best PROs in the nation. Losing loyal, dedicated people has been the most difficult part of dealing with HCFA's frequent changes in program requirements.

As I reflect on the past 10 years, I sometimes wonder why KePRO has been so successful. Was it the oversight and direction provided by the Board of Directors? Was it the dedication and hard work of the KePRO staff? I tend to think it is a combination of both. It just happens that we had an excellent blending of the right personalities, similar long-term goals and objectives, and a desire to produce a quality product. Congratulations to both KePRO staff and the board in reaching this important milestone. ☺

Dr. Harrop, president of the Keystone Peer Review Organization (KePRO), offers KePRO news and views in this column each month.

KePRO staff members celebrating 10 years of service include (left to right): Patti Johnson, Beth Hackman, Barb Shearer, Stephanie Heinzman, Lynne Horn, Ruth Jarrett, Donald E. Harrop, MD, and Carm Striano. Not pictured: Marcia Rohland, Kristie Myers, Eileen Queenan, and Pat Eley.

With disability insurance this affordable, can you afford to be without it?

Your ability to earn an income is your most precious asset. So if you've been putting off disability coverage because it's too costly or difficult to find, here's good news:

You can now protect yourself and your family with top-quality disability coverage through the Pennsylvania Medical Society and its endorsed broker, Colburn-Bertholon-Rowland (CBR). And thanks to the society's purchasing power, you can select between non-cancelable or guaranteed renewable

policies, at highly affordable group rates.

When you choose CBR, you'll be covered by a carrier rated "A" or better by A.M. Best Company. And, you will have the added advantage of being insured for your "own occupation".

You'll also enjoy the convenience of working with CBR, a company that has been serving the insurance needs of Pennsylvania professionals for over 65 years.

Medical Students Tackle Adolescent Health

Maureen Hoepfer

Vincent J. Zarro, MD, PhD, is assistant dean of student affairs and director of the division of addiction medicine in the Department of Medicine at the Medical College of Pennsylvania and Hahnemann University School of Medicine. For the past nine years, he has been involved in university efforts to address public health needs in the Philadelphia area through programs involving medical students.

Being an adolescent in America today is a risky business, according to a new report released by the National Center for Health Statistics. The report concludes that "a substantial number of U.S. youth are engaging in risk-taking behaviors that can lead to chronic disease, injury, and death." These behaviors include widespread tobacco and alcohol use, unprotected sex, unsafe driving, and carrying a weapon.

Disturbing findings

The findings are based on a 1992 national survey of 10,645 youths from 12 to 21 years old. It is one of the most comprehensive studies ever undertaken to measure health risk behaviors of America's 34.4 million young people. The survey found:

- More than two-thirds of the youths had drunk alcohol at least once. Forty percent had consumed alcohol on 10 or more days in their lives, and 45 percent had done so within the month before being interviewed.
- Nearly three out of 10 adolescents of driving age had gotten behind the wheel after drinking, and one-fourth of all youngsters said they have ridden in a car in the past month with a driver who had been drinking.
- Sixty percent have smoked cigarettes, and just over 25 percent were current smokers.
- Three out of 10 youths had used some type of illegal drug in their lifetimes.
- Six out of 10 never-married youths have had sexual intercourse.

- About one in seven carried a weapon at least one day in the month before the interview. Ten percent said they had been in four or more physical fights in the past year, with the highest rate among 12 to 13 year olds.

"During the past few decades, the health status of adolescents in this country has been declining," says Vincent Zarro, MD, PhD. "Some of these high-risk behaviors may cause health problems that could last a lifetime, or worse yet, could cut short many young lives."

Dr. Zarro says that the study findings point to the very early age at which experimentation with addictive substances begins. "We have been finding that children as young as eight and nine are experimenting with alcohol and nicotine on a regular basis," he says. "Unfortunately, there is a natural progression from experimentation to regular use as children move from the preteen years to young adulthood. The literature has documented that early age of first drug use significantly increases drug addiction in later years."

Communicating effectively

The Center for Health Statistics' study also showed that health risks among adolescents are often clustered together, with youths participating in multiple unhealthy behaviors. For example, those teens who smoked were more likely to also engage in drinking, sex, and physical violence. For these reasons, Dr. Zarro believes that health educators must reevaluate how they communicate to America's youth.

Most messages target only one subject, such as cigarette smoking or drinking and driving, but the materials should be tailored to youth that engage in multiple high-risk behaviors. "To have a chance at success, public education programs have to attack *all* these risk behaviors, and if we want to prevent youth from engaging in these behaviors, the education has to start early—in preschool, kindergarten, and the primary elementary school grades."

According to Dr. Zarro, medical students are an effective resource in "getting

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one of a series, begun in January 1993 and ongoing through 1995, sponsored by Keystones of Public Health, the Trust's endeavor to address public health needs.

the message across" to youngsters about the threats posed by drinking, smoking, unprotected sex, and violence. "Youth perceive the medical student as one of their own. These students are not their parents or teachers, and they are closer in age so they accept them as peers," Dr. Zarro explains. "Yet, medical students have status among youth and are perceived as being knowledgeable. From our experiences, adolescents believe the medical students will give them the straight scoop."

Medical students become involved

For nearly nine years, the Medical College of Pennsylvania and Hahnemann University School of Medicine has been addressing public health needs in the Philadelphia area through programs involving medical students. In 1987, the medical school began participating in a national community education program initiated by the American Medical Student Association.

The Adolescent Substance Abuse Prevention Project (ASAP) involves medical student volunteers teaching about body systems, drugs, alcohol, peer resistance, and self-esteem to children in Philadelphia middle schools and at the city's Boys and Girls Clubs. "Our students go in and teach about substance abuse from the perspective of normal health. They use personal examples and set up scenarios which try to make the youth come to their own conclusions. Our students offer them alternatives to engaging in high-risk behaviors," Dr. Zarro explains.

To date, the ASAP program has been extremely successful, he says. It led the medical school to explore other public health programs using medical students. These include:

Project Med—As an offshoot of the ASAP project, Hahnemann medical students developed a year-long health curriculum for sixth graders. It encompasses such areas as general health and well-being, nutrition, sex and sexually transmitted diseases, and health careers. The medical students teach by lecturing, using visual aids, and planning activities for students, including field trips. The curriculum is now

being tested at Gillespie Middle School in Philadelphia.

Community-Based Educational Experience—This is a seven-to-10-week course taken by first-year medical students. It involves a two-hour per week didactic session and a community service practicum. For example, students may be involved with teaching youth as part of the ASAP project, working in health clinics educating pregnant teens on prenatal care and the basics of infant care, or working with the Boys and Girls Clubs of Greater Philadelphia on health education efforts.

"Our goals with this program are two-fold: to give meaningful service to the community and to have medical students learn by experience some of the community factors that impact on public health and the delivery of health care," Dr. Zarro says.

The Changes and Graduate Programs—These programs address the academic and vocational needs of low-income, "high-risk" high school students. The two projects serve 90 youth in special programs at Martin Luther King, George Washington, and Overbrook High Schools in Philadelphia. Students come to the medical school to health and science classes taught by the medical students who are assisted by the faculty. In the Changes program, students also attend a problem-solving class taught by a counselor. When the programs were evaluated, Dr. Zarro said that the truancy rate for these students dropped from 50 percent to 10 to 15 percent last year.

Bridging the Gaps—This projects involves all the Philadelphia medical schools. Medical and allied health students are placed in community-based health and social service

organizations to complete a seven-week community service internship during the summer.

In 1994, 149 students worked on 81 projects in the Philadelphia area. Hahnemann students organized a health education program to be taught at the Philadelphia Industrial Correctional Complex, a prison for women; designed and implemented a weekly health and science class for Hannah House, a half-way

"Dr. Zarro believes the medical students have benefited as much as the community from these public health projects."

Philadelphia youth and Hahnemann medical students (pictured in back row) find the medical school's ASAP public health program can be both educational and fun.

house for women who have violated parole; and offered support services at local community health facilities, such as Hope Clinic and the Catholic Worker Free Clinic.

Educating future physicians

Dr. Zarro believes the medical students have benefited as much as the community from these public health projects. The programs enable students to explore their interest in primary care and community health while providing valuable service to the underserved populations in Philadelphia. Students also learn some of the basic knowledge, skills, and attitudes necessary for clinical practice in underserved settings.

Last summer, Christine Morgan, a second-year medical student at Hahnemann, participated in ASAP. She says the experience was eye opening. "I have a new appreciation for this community... These kids are not given nearly enough credit.

They understand a lot about success and what it takes to achieve it," she says. "It isn't that they don't care enough about their future, it's just that they aren't given enough opportunities."

Opportunity is what the medical school's community health programs are all about, Dr. Zarro says. "For years in medicine, we have been neglecting the impact of high-risk behaviors and other community factors on health care and the delivery of that care. Instead, the emphasis was placed on technology," he explains.

"But now, these factors have contributed to some monumental public health problems, such as drug abuse and HIV-infection—problems which could cripple our health care system. In my opinion, medical students are a valuable, untapped resource. If we give them the opportunity, they will find the answers to some of our most pressing public health problems. They are our hope for the future." ◊

It's YOUR money. Why wait?

Electronic Submission of Insurance Claims...

Electronic claims processing will cost the health care provider less than paper claims. The average doctor spends from \$7.00 to \$14.00 processing each claim by paper. However, **Medical Billing Professionals'** fee is only *\$1.25 per claim* (\$1.75 for claims submitted to Blue Cross/Blue Shield, Medicare, Medicaid, Pa. Healthpass and Champus).

Electronically submitted claims are paid within 5-21 days of receipt by the insurance company, far less than the average 30-60 days for manually processed claims. Our company has a toll-free fax number, allowing you to provide the necessary information at no cost to you and allowing the claim to be submitted the same day services are rendered. For practices submitting at least 800 claims per month, prepaid Priority Mail envelopes can also be provided upon request.

MEDICAL BILLING PROFESSIONALS will process your first 100 claims *for free* if you mention this ad. **IMPROVE YOUR CASH FLOW. REDUCE YOUR OVERHEAD.**

*Presbyterian Medical Center designates this continued medical education activity for 2 credit hours in Category I of the Physicians' Recognition Award of the American Medical Association and the Pennsylvania Medical Society Membership requirement. Nine sessions, 18 credits.

Presbyterian Medical Center of the University of Pennsylvania Health System is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

Office Managers: Nobody Knows the Trouble They See

Sandy Marrone

Computers, code revisions, and patients' changing expectations have added responsibility and a new level of complexity to the job of medical office manager. How are you and your office manager coping? Some experienced managers relay their views of this rapidly changing field.

Once upon a time, your practice probably ran quite smoothly, with a *modus operandi* something like this: Your secretary checked in patients. You and your nurse handled their medical needs. Then the patients trotted on out to the secretary's desk where she accepted their payments or put their bills on a stack to go to insurance, and scheduled their next appointments. Your office manager made sure insurance claims were filed, went after slow payers, made referrals, kept the files in order, figured out staff work schedules, pitched in to answer the phone—and probably found time to run some routine errands in between.

Voilà. Successful medical practice.

Not anymore.

Given the complexities of Medicare's ever-changing codes; new regulations from auto insurance, CLIA, OSHA, and workers' compensation; managed care programs, HMOs, and secondary insurance; and all the different forms each requires, your office manager—business manager, CEO, or MBA—is riding some combination of a merry-go-round and a roller coaster.

"There are no periods of status quo any more," says Kay Salvino, manager for a group of 13 medical specialists in Abington. "Before, Medicare codes or fee schedules would change, then you'd hit a status quo for a couple of years. Now, the changes come so fast that you're always in a transitional mode."

Medicare codes and fee schedules are the least of it, according to Nancy Becker, practice management consultant at the University of Pennsylvania Health Systems. "Once you understand the evaluation and management codes, you find

them easier than the old ones. Reimbursement is not as high, but you get paid within 30 days if you do the form correctly. That, at least, is a black-and-white issue."

The devil in the details

What's not so black and white are medical claims for auto insurance, workers' comp, HMOs, PPOs, and managed care programs. Workers' comp regulations demand a form on a patient's progress every 30 days. "The law has made drastic reductions in fees, and you cannot go to the patient anymore for the money," says Becker. "So you must keep track of the companies you're dealing with, and you must run the office more efficiently." If you don't, you won't get paid.

That's why "being competent as a doc and having a good secretary aren't enough today," says David Regan, director of primary care services for HealthAmerica. "Running a practice is much more sophisticated, and we are starting to apply management science to what was a cottage industry." Of managed care, Becker says, "It was originally thought it would hurt primary care, but it actually benefits primary care. Physicians know what they'll be paid and when, and the wellness programs put an emphasis on staying healthy."

On the negative side of such programs is the challenge of knowing where you can refer, how to get authorization to refer, and the forms, forms, forms.

"Managers have to be a lot faster on their feet to know how the contracts work," says Kathleen Siker, administrator for practices affiliated with the University of Pittsburgh. "It's especially hard in specialists' offices because, with the primary care physicians as gatekeepers, specialists do not have direct access to the patient. Those relationships will be a lot less straightforward for a while. They demand a major shift in all our frames of reference because, regardless of specialty, many doctors think they provide primary care."

Enter the office manager. She, and today often he, "must make patients and

Sandy Marrone is a freelance writer based in Palmyra. In her other life, she was office manager for her husband's family practice for 10 years. When the going got too rough, she got going into a writing career and left the job in more capable hands.

physicians understand [complexities] in the most efficient and effective ways possible," Siker says.

Okay. The forms are filled out, the referrals are properly made, and the patient seems to understand his or her coverage. Now, maybe, your manager can slip out and run that routine errand for you. But wait. First your manager wants to talk to you about your chart notes. "My chart notes?" you say. "Yes, your chart notes," is the reply.

"Both the business and recordkeeping procedures are under constant scrutiny," says Jay Roberts, chief executive officer of Fornance Physician Services, a 65-physician multispecialty group in Norristown. For example, he says, "U.S. Healthcare offers pay incentives for keeping good medical records, so somebody must be in charge of those."

Becker agrees. "Physicians cannot just say, 'I checked the patient's arms and feet, etc. Instead they must say what they saw during the examination.'"

"Okay, okay. I understand," you say. "Did you run that errand yet?"

"I will," your manager replies. "Right after I wrestle with the staff's work schedule. Too many people want vacations during the same week."

Once the work schedule is completed, and the feathers that got ruffled over it are smoothed, your manager again may have to put off that errand, because the staff meeting agenda beckons.

"Staff meetings are more important now," says Becker. "The staff has to be told something different as coverage plans change, and it's another challenge to keep the staff educated." Changes and staff meetings addressing them often require your manager to perform a balancing act. He or she must make your office hum, so you're free to practice good medicine. Essential to that is keeping the staff updated.

Remember your reaction when your manager said you must be more complete in your medical records? Times that by the number of people on your staff who are not receptive to change. They've been doing things a certain way all their lives. None of the reasons your office manager can give are good enough to convince these people to move beyond their comfort level. Somehow, it's got to be done, and it's your office manager's job to do it and do it well. The manager soothes, trains, and, despite all his or her efforts, somebody not able to accept it all might quit. Then the manager has to face interviewing, hiring, and training a replacement.

Does loyalty count?

But what if your manager personally cannot deal with the changes? Here is this hard-working, smart, congenial person who has been loyal to you since day one. As your practice grew, you promoted him or her to office manager, and now the changes in medicine are more than he or she can handle. Certainly, you don't want to dump your manager. There's a good chance you won't have to go that far, but there's also a good chance he or she isn't the best person to manage your practice anymore.

"The old-time, valued secretary still has a job," said Regan. "She learned by the seat of her pants and was smart enough for the old role, but perhaps lacks the formal training needed to keep up with the new ways." Roberts' advice is to match the old-time secretary's education "with the physical needs of the office."

Regan adds, "Today's medical environment has put pressure on the physician to hire somebody who can do the necessary managing. The doctors can't do it. Their spare time is between midnight and 6:00 a.m."

Perhaps unique among the managers who have worked their way up is Deb Steffen of Lebanon Valley Family Medicine, Inc., Palmyra. She says she's willing to face the changes necessary to manage her employer's practice, but she's not humiliated or angry at the thought of one day being replaced. "I think we need a business manager," says this manager of a three-doctor practice. "I don't want this practice to suffer because of my lack of formal training. Everything we do has legal ramifications. I'm on the phone to [our insurer] almost every day. Sometimes I feel inadequate. I go to conferences, I'm willing to learn, and I'm receptive to change. But I do not want to stop working to go to college for a degree. I trust my doctors. They said they will not put me out the door, and I will accept a restructured position if it comes to that."

People like Steffen make the best managers, according to Becker. They accept change, yet they've been around long enough to know what works best given their doctors' philosophies and work styles. "They've come up through the ranks, and the physicians have empowered them and given them continuing education," Becker says.

Salvino adds, "Not everybody is lucky enough to have someone like that. More often, office managers are better off if they did not come up through the mom-and-pop sort of thing. Old-timers sometimes

"Being competent as a doc and having a good secretary aren't enough today."

—David Regan, director of primary care services, HealthAmerica

know exactly how to make physicians happy by running errands, but don't have enough actual knowledge about how to make an office hum. Today's manager needs to be much more aware of what's going on on the outside, not just in his or her own little office. [In today's environment,] the more outside things a manager knows, the better for the practice."

Ability to network

Many physicians' groups have grown so large and become so complex, their practices need a CEO or MBA to oversee operations and have created separate departments with their own managers. Even small groups, like Steffen's, have departmentalized to better handle clinical and administrative matters.

Whatever you call your manager, he or she must continually educate themselves by reading and attending conferences and seminars. The experts agree that education is the key to staying current and being an asset to a practice.

Seminars do much more than inform. "We've come to recognize the psychotherapy nature of seminars," Roberts says. If you look at your manager's day—informing you and the staff, soothing, scheduling, and conforming to regulations—you can see he or she is in the midst of everything, yet all alone. "I'm without peers and sometimes it's frustrating," says Salvino. "I facilitate for doctors and have answers for staff, but nobody understands the big picture of what I do."

A seminar provides a room full of peers for the otherwise isolated office manager, as do networking groups like the Professional Association of Health Care Office Managers (PAHCOM) and the Medical Group Management Association (MGMA). Both groups are national organizations with local chapters that allow managers to vent their frustrations to each other.

"Say I'm an OB manager in Harrisburg, and I'm not comfortable calling someone across town to say, 'You won't believe what I did,'" explains Regan, president of the state chapter of MGMA. "I network to Nebraska to someone I know from MGMA; [we] can talk freely because of the distance."

Both groups offer newsletters, conferences, continuing education, and 800 phone numbers for help with problem solving and testing on topics germane to certification as medical manager.

"PAHCOM helps me be effective in my position," says Becker, who in September assumed the presidency of the chapter covering Bucks and Montgomery coun-

ties. "They held mini-meetings for specialties to help us stay current, and we contacted the Pennsylvania Medical Society and had meetings with them to understand legislation on workers' comp and how to get the best reimbursement for our doctors."

Not only managers, but you as an employer, benefit from these groups. Besides having a happier and better-informed manager, you also get creative ideas from networking and can save money through group purchasing.

Some managers' groups are ad hoc, like the one formed in Lebanon County about nine months ago. According to Gary Mann, business manager for Fredricksburg Community Health Center and coordinator for the managers' group, "Three or four area office managers met at a seminar and decided to get together. We share information, common problems and goals, and we're considering group purchasing. Knowing people out there makes it go a lot easier."

Helping your manager

You, as an employer of a valuable manager, can make it go easier too. Here's a sampling of advice from the medical managers interviewed:

- Offer incentives and bonuses based on practice income and on how the office runs. You'll give your manager the willingness to go the extra mile and become the cheerleader for the staff. Without the staff working as a team, it's just not going to happen.

- Have an open mind. Study and look at what something new means before you react. Become part of the process to make efficient evaluations.

- Try to educate yourself, and find ways to see a glass as half full, not half empty. Be ready to modify plans.

- Emphasize constant education for managers—it is essential to support physicians in today's world of health care.

- Good managers are willing to take risks, and doctors must support them even if they err. Don't take your frustration out on your manager, and take more time to confer with your manager.

- Do not use your time to decide what kind of copier to buy. Build a bond of trust, knowing your manager will act in your best interest. But do discuss with your manager issues that will impact your practice.

Author's advice: Find someone else to run that routine errand for you. Your office manager is too valuable to waste on such chores. ☐

Stop the Distractions— We Need to Focus

Ask yourself these questions: Given the economic and political environment surrounding health care, are you concerned about your personal financial situation? Do you believe that you should have received more formal training in order to handle your personal financial affairs? Would you prefer that providers of financial advice be free of any attachment to a particular investment product? If you answered yes to any of these questions, you are definitely in the majority.

During the past three years, AMA Services has gathered an extensive amount of market research regarding the current financial needs of physicians. At least 84 percent of all physicians contacted responded affirmatively to the questions above, primarily because of their experiences with providers of financial products. All too often, suggestions are made or strategies developed that do not have the best interest of the physician in mind, but focus on the latest "fad" or a "hot tip." Rather than reacting to these distractions, you should focus on a time-tested and proven strategy that will allow you to effectively manage your personal and retirement portfolio.

Key determinants

Studies of large pension plan portfolios have found that there are three key determinants in evaluating portfolio performance: asset allocation, security selection, and market timing. The studies show that over 90 percent of a portfolio's performance is a function of asset allocation. The remaining, relatively minor impact is split between security selection and market timing.

Think about it. Very often physicians spend a substantial amount of time determining a market-timing strategy or security selection. This is a perfect example

of a distraction that expends energy on a relatively unimportant issue. Because of this, physicians often become susceptible to the "can't lose" product solicitation or the "must do" plea to act now before the so-called "opportunity" is gone.

This approach creates uncertainty: uncertain results since it is difficult to obtain accurate information about the performance of your investments; uncertain risks because it is difficult to obtain accurate information about the types of losses you can suffer; uncertain costs because, unfortunately, you often lack information about the true costs and expenses involved in many investment programs.

Asset allocation

Asset allocation recognizes that various types of assets react differently to changes in economic conditions. Investments are usually spread among three different asset classes—stocks, bonds, and cash. Such allocation is designed to maximize your investment returns while minimizing your exposure to risk.

Within the three main asset classes there are different categories. For example, within the stock class you may choose large-company stocks or small-company stocks. There are also different styles of investing. The relationship between these asset classes and styles are key elements of asset allocation. Recognizing this relationship can be a powerful tool in eliminating unwanted distractions that prevent the focus needed to accomplish identified goals.

A process that works

Working hand in hand with asset allocation is the use of an effective and systematic process that has been employed with success. This process begins by *identifying your financial goals*. Understanding where you want to be will help you determine

the actions needed to arrive successfully. This step also involves identifying your willingness to take a risk, as well as your preferred choices for asset classes.

Once your goals have been identified, the next step is to *analyze your current situation*. By reviewing your existing investment portfolio, you are able to identify the level of risks you are taking, as well as the amount of diversification that exists.

The final step, *developing a strategy for portfolio management*, should only be completed after you have built a foundation through the previous steps of the process. Keep in mind that past experience may have indicated that you should act first and think later regarding your investment selections. By following a proven strategy, you will be able to minimize selections that do not fit in with your long-term objectives.

Following this process, along with using effective asset allocation strategy, can help eliminate many of the distractions that physicians have experienced while analyzing their investment portfolios. Putting an end to these distractions produces a focus that can result in long-term goal accomplishment.

"Healthscapes" Affect Perceptions of Quality

David Woods

In their intensifying quest for customer satisfaction, corporations increasingly realize the importance of the physical setting in which the transaction takes place as a prime influence on that satisfaction. Thus, supermarkets concern themselves with positioning and presentation of goods, with lighting and sound; stores like The Gap and Victoria's Secret are masters of creating an ambiance conducive—even seductive—to satisfactory exchange between would-be seller and prospective buyer.

Managers in the health care "trade" can learn from this. In an age in which the goal of patient satisfaction is a given, yet the knowledge base for patients to assess clinical competence is pretty narrow, there's increasing reliance on empathy and ambiance in determining the level of satisfaction in a therapeutic encounter.

Despite this, little research has been done into exactly what kinds of physical surroundings have what kinds of effects within the health care setting, a fact acknowledged in a—nonetheless—thorough review of whatever literature on the subject does exist.

Authors Hutton and Richardson contend that "the role of the health care physical or tangible environment, including the facility, is essentially an unstudied area." Calling this environment the "healthscape," they note not only that service quality and customer service may be the most critical issues facing health care marketers today, but that customer perception of such quality—or lack of it—is based to a considerable extent upon the physical environment in which the "service" occurs. In fact, they quote one study showing this is the most highly rated component among seven indicators of patient satisfaction.

And yet, even as health care becomes more competitive, and the desire to measure and achieve quality becomes more urgent, it seems odd that a factor as influential as the healthscape remains the object of so little attention. Hospital and doctors' waiting rooms are still all too often drab and forbidding places stocked

with ancient periodicals, wilting plants, tacky furniture, and a generally unwelcoming layout. Not that anyone wants to be in either of those places, but if they are, the experience should surely be made as "user friendly" as possible.

What that means, say Hutton and Richardson, is paying attention to such ambient conditions as temperature, air quality, noise, music, odor, colors, lighting, and texture, as well as layout, and style of decor. In modern health care, "if patients receive treatment in a rundown facility, they are likely to demean not only the facility but the treatment as well."

Among several propositions the authors propound are:

- Patients "dissatisfied" with a facility are more likely to switch to another.
- Healthscapes will be of paramount concern to health care marketers due to health care's low price differential, inseparability of service and place—and increasing competition.
- Organized and tidy environments are more likely to lead to satisfaction with a health care facility than disorganized ones.
- A basic human instinct is to feel safe in a given environment.

The authors conclude that healthscapes must be kept clean, organized, pleasant smelling, and comfortable, without going overboard with plush surrounds, which today's educated patients know full well they are paying for either directly or indirectly. All areas of health facilities must be accessible to as much natural light as possible. Noise and temperature levels must be monitored and maintained.

"If a patient is more satisfied with the healthscapes of a health care facility, then he or she is more likely to be satisfied with the complete service encounter...and, most important, proper healthscapes can have a positive impact upon the actual healing processes of patients," the authors write.

Clearly, the healthscape is a scene too long overlooked by managers and marketers...and one where renewed attention and scrutiny will yield rewards both in perception of quality and improvement in care. ◊

AMA DELEGATION NEWS

Hold Harmless, Due Process Resolutions Supported by AMA House of Delegates

Physicians nationwide agreed with Pennsylvania concerns about "hold harmless" clauses in Medicare contracts and managed care organizations' due process at the AMA House of Delegates' annual meeting in Chicago in June.

The AMA House adopted two resolutions submitted by the Pennsylvania Delegation. The first calls for the AMA to:

- recommend to the Health Care Financing Administration (HCFA) that carriers be held accountable for financial losses incurred as a result of carrier errors and that hold harmless clauses be eliminated from all Medicare carrier contracts; and
- recommend to each Carrier Advisory Committee that it identify and discuss hold harmless clauses with their own Medicare carriers, and that it work to eliminate and prohibit such clauses from carrier contracts.

As impetus for the resolution, Pennsylvania delegates cited the contract between Pennsylvania Blue Shield and HCFA (which represents Medicare) which includes a hold harmless clause that absolves Blue Shield of any financial responsibility for errors it makes. In the case of the Medicare clinical laboratory overpayment of 1993-94, in which Blue Shield over-reimbursed for certain Medicare clinical lab procedures, the Office of Inspector General has allowed the carrier to recoup lost monies, and, according to the resolution, "has portrayed physicians and laboratories as those who are responsible to pay for errors made by [Pennsylvania Blue Shield]." The resolution adds that this example has caused "financial and personal hardships" to physicians.

The resolution also instructs the AMA to explore the possibility of promoting federal legislation that would prohibit HCFA from developing any new or canceling any

Howard A. Richter, MD (above), speaker of the State Society House of Delegates, chaired the AMA Reference Committee on Science and Technology at this year's AMA annual meeting in June. The hot issue before the committee was perinatal discharge of mothers and infants, which garnered national media attention throughout the meeting. Also serving on the AMA Reference Committee on Amendments to the Constitution and Bylaws was Michael J. Prendergast, MD, York.

existing hold harmless clauses with carriers.

The second Pennsylvania resolution adopted by the AMA House directs the AMA to call upon managed care organization accrediting agencies to require application review, appeal, and termination fair hearing/appeals processes, "just as hospital medical staffs must have in their bylaws to qualify for Joint Commission on Accreditation of Healthcare Organizations accreditation."

According to the resolution, "Many managed care organizations (MCOs) do not provide due process for providers' applications, appeals processes, or termination; [and] many physicians have had their applications for MCOs refused, or have been terminated for no clear reason."

The delegation concludes, "While current AMA policy is to seek

legislative relief, an alternative would be to require similar due process protection by managed care organizations seeking certification from accrediting agencies."

In other action, the AMA House referred for further consideration or decision Pennsylvania resolutions seeking:

- coverage through the Medicare program for annual gynecological exams and PAP smears;
- principles regarding states' regulation of nurse practitioners;
- study of the feasibility of modifying a Food and Drug Administration amendment to allow incremental stages of availability for new drugs;
- study of mechanisms that would mandate managed care organizations to contribute toward the care of the uninsured;
- national clearinghouse systems for clearing health insurance claims, with the goal of achieving cost efficiencies comparable to bank clearinghouses for checks; and
- production of a condensed, loose-leaf version of the AMA Policy Compendium with more complete indexing and semi-annual updating.

Meeting highlights

Also at the meeting:

- The AMA supported its leaders' call for a balanced federal budget, financially solvent Medicare, and a market-driven health system.
- The House adopted an AMA Medical Student Section resolution asking the AMA "to increase the availability of information on specialty choice to medical students and resident physicians by gathering and disseminating information on market demand and physician workforce needs for all specialties."
- Speaker of the House Newt Gingrich spoke via live satellite to the delegates about health care changes under discussion in Washington, including Medicare, Medicaid, veterans' health care, free market applications, and how to improve health care in the U.S. Among national strategies he proposed for the next decade: replace the welfare state with an opportunity society, decentralize power away from Washington, benchmark every aspect of the federal government for excellence, ensure that Medicare and Social

MEDICARE NEWS

MEDICARE MESS MARCHES THROUGH SUMMER PRESS

Medicare news dominated headlines across the state and nation all summer long. Among the top stories:

- AMA President Lonnie R.

Bristow, MD, presented the AMA's proposal to transform the Medicare system to Congress in mid-July. The heart of the AMA's proposal would be a shift away from government control toward personal responsibility and providing beneficiaries with several different options, including managed care.

- While U.S. House Republicans spent much of their summer debating how best to revamp the Medicare program, House Minority Leader Richard A. Gephardt (D-Missouri) said his party will use delaying tactics to draw attention to the debate this fall, since the debate will be critical in the 1996 general election.

- Vice President Al Gore and First Lady Hillary Rodham Clinton on July 11 unveiled a series of health care regulatory reforms within HCFA to: eliminate the Physician Attestation Form, reward good performance by laboratories by reducing regulatory oversight burdens, give Medicare providers more time for patient care by eliminating unnecessary government micromanagement, and begin moving toward use of a standard claim form for all federal health care programs.

- Effective January 1, 1996, Medicare expects to lower its premiums from \$46.10 per month to around \$43.50 per month. The decrease is the result of health care costs having increased at a lesser rate than expected; according to a pricing-formula schedule, payments must go down.

- Medicare and Medicaid patients can call a new national hotline if they think their physician, hospital, nursing home, or other caregiver is ripping off the government. The number—(800) 447-8477—is operational from 9:00 a.m. to 8:00 p.m., Monday through Friday.

ANNUAL MEETING PREVIEW

COMPUTERS FOCUS OF HMSS/TRUST SEMINAR

The State Society's Hospital Medical Staff Section (HMSS) and the Institute for Physician Leadership of the

Several Pennsylvania physicians received AMA Outreach Awards for their efforts to boost membership in the AMA and the State Society during the past year. Award recipients included delegates Doris Bartuska, MD, Robert N. Moyers, MD, Robert D. Reinecke, MD, and Carol E. Rose, MD; Organized Medical Staff Section members Ronald Carlucci, MD, Erwin Cohen, MD, Richard N. Harris, MD, William Lander, MD, Wilma C. Light, MD, Lee H. McCormick, MD, Nicholas Rorick, MD, and Paul Wengert, MD; and Young Physician Section member Martin Trichtinger, MD. Pictured (clockwise from top) are: Drs. Rose, Cohen, Wengert, and Light. The Society also extends its gratitude to the other 25-plus participants of this program.

Security are reliable trust funds, and create a safe America by suppressing violent crime.

- Robert E. McAfee, MD, immediate past president of the AMA, offered a "fairy tale" of an exaugural speech in which he overviewed the federation's efforts this past year, working with government officials on health reform. Among the key players of his "tale": King Will and his Queen, who live in the White Palace; Gingrich's Old Pals (GOP); the Knights of Newt; and the Monster Medicare. He also spoke of a "costly game known as Torts." In closing, Dr. McAfee said, "For this privilege of serving as your Chief Wizard for the year, I thank you so very much."

Election results

In elections:

- Robert N. Moyers, MD, was reelected to the AMA Council on Medical Economics. A Meadville family practitioner, Dr. Moyers was State Society president in 1991-92.

- Steven C. Thornquist, MD, Philadelphia, was unsuccessful in his effort to obtain a resident slot on the Council on Medical Service.

- Regina Benjamin, MD, MBA, of Bayou La Batre, Alabama, was elected the first Young Physician Trustee of the AMA Board of Trustees. (For more on the YPS meeting, see page 46).

Educational and Scientific Trust will jointly sponsor a computer seminar on Thursday, October 26, from 1:30 to 5:30 p.m. "Improving Your Practice Efficiency with Electronic Technology" will be held at the Hershey Lodge and Convention Center as part of the HMSS annual meeting.

Physicians enrolling in the computer roundtable will be able to visit six tables during the seminar and observe physician "experts" demonstrating different types of medical computer applications. Topics to be covered include:

- Physicians Online;
- clinical data repositories, longitudinal clinical databases, and lifetime patient records;
- CD-ROM databases and interactive continuing medical education;
- World Wide Web and Internet access and services;
- physician organization management;
- quality assessment and use of practice parameters;
- computer basics and educational diversions; and
- community health information systems.

Because space is limited, registration will be closed at 100. Cost of the seminar is \$100 for Society members and \$135 for nonmembers. For additional information, call the HMSS at (800) 228-7823. The seminar carries four hours of Category 1 continuing medical education credit.

DUES REBATE

The total amount of the 1995 dues rebate received by the State Society from the AMA was \$114,521, which is \$2,807 more than received in 1994. The dues rebate is an annual incentive for state and county medical societies to encourage physicians to pay their dues early.

In keeping with Society policy, 50 percent of the rebate (\$57,260) was distributed to county medical societies. Seventy-five percent of the county share is for AMA dues reported by January 15; 20 percent for AMA dues reported between January 16 and February 15; and five percent for AMA dues reported between February 16 and March 15.

TRUST PLANS ANNUAL DOCS' TROT RUN/WALK

The 1995 Docs' Trot on Friday, October 27, will provide an opportunity to stay healthy and support preventive medicine. Sponsored each year by the Society's Educational and Scientific Trust, the 5-meter run/2.5-meter walk is held in conjunction with the Society's annual business meeting.

Registration for the run/walk begins at 6:45 a.m. with an official starting time of 7:00 a.m. from the Hershey Lodge and Convention Center lobby. Participants can enjoy post-race refreshments, prizes for the male and female winners of both the run and the walk, a chance to win a \$25 gift certificate, and free t-shirts.

This year, a \$15 registration fee will benefit the Trust's loan program for medical students in need. For more information or to pre-register, call Sandra Fees at the Trust at:

(800) 228-7823

or

(717) 558-7750.

BLUES' NEWS

ASSOCIATION INTRODUCES BLUECARD PROGRAM

The Blue Cross and Blue Shield Association has introduced the new BlueCard program to link participating health care providers and the independent Blue Cross and Blue Shield plans across the country with a single electronic process for claims and reimbursement.

According to the Chicago-based association of 67 independent Blue Cross and Blue Shield plans, out-of-town patients' claims are handled by physicians' local Blue Cross/Blue Shield plans. The local plan helps manage claims collection, problem resolution, and claims payment; in turn, claims are processed accurately and quickly, eliminating slow payments and the need to track receivables from the multiple, independent Blue Cross and Blue Shield plans.

For more information about the new program, call the association at (312) 440-6000.

SCHOLARS PROGRAM TARGETS PHYSICIAN SUPPLY PROBLEMS

The Medical College of Pennsylvania and Hahnemann University, Crozer-Chester Medical Center, and Widener University are joining forces to offer an integrated undergraduate/medical school and affiliated hospital program to be known as the Crozer-Chester Medical Center Scholars Program.

The program—an early-assurance, contingency medical school admission program—is for high school seniors who have applied to Widener University, Chester, for pre-medical study. The goal is to attract students who plan to pursue family medicine, general internal medicine, or general pediatrics—all specialties in short supply.

A maximum of four scholars, who must meet certain academic performance levels to gain medical school admission, will be selected each year.

RESOLUTION DEADLINES...

FOR SOCIETY'S ANNUAL MEETING

Deadline for submission of resolutions for consideration by the 1995 Pennsylvania Medical Society House of Delegates is September 27, 1995. Late submissions require a two-thirds vote to become House business.

Any member of the Society may write a resolution. However, resolutions must be introduced by a delegate. For assistance, contact your county medical society's delegates to the House.

Send resolutions to: Kay Barrett, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820; or fax to: (717) 558-7840.

FOR AMA RESOLUTION DEADLINE

The Resolution Committee of the Pennsylvania Delegation to the AMA has set October 1 as the deadline for receiving resolutions to be considered for submission to the AMA House of Delegates at the December 1995 Interim Meeting in Washington, DC. Resolutions received after this date will be considered for the June 1996 Annual Meeting of the AMA House in Chicago.

Send resolutions to: Arnold Cushner, Pennsylvania Medical Society, P.O. Box 8820, Harrisburg, PA 17105-8820, or fax to (717) 558-7840.

PMSLIC INSUREDS RECEIVE BREAST CANCER STUDY

Insureds of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) have received a free copy of a second Breast Cancer Study conducted by the Physician Insurers Association of America (PIAA).

In 1990, PIAA conducted an in-depth study of claims arising from the failure to diagnose or delay in diagnosis of breast cancer. At that time, breast cancer cases represented the most expensive and the second most common condition in PIAA's Data Sharing Project. PMSLIC insureds received a free copy of the 1990 study after its completion.

Because the diagnosis of breast cancer remains the leading cause of malpractice in terms of claim frequency, according to PIAA, its board authorized this second study

of cases reported to the Data Sharing Project since the 1990 analysis. PMSLIC's Risk Management Department anticipated distribution of the second study—including results and recommendations—last month.

PMSLIC ISSUES SEMI-ANNUAL CLAIMS STATISTICS REPORT

The Pennsylvania Medical Society House of Delegates Resolution 86-17 requires that the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) report certain claims statistics to the House of Delegates on a semi-annual basis.

In response to this resolution, PMSLIC published the first semi-annual report in the September 1987 issue of PENNSYLVANIA MEDICINE. The data included in the following tables is an update of PMSLIC's claims experience as requested by the resolution.

Note: To more accurately reflect PMSLIC's experience, the tables have been expanded to include all claims and suits indexed against PMSLIC insureds since the company's inception in 1978. The exhibits below and on page 44 represent data for January 1, 1978, through June 30, 1995.

Table 1 (below): Joinders—Includes PMSLIC physicians joined by other parties and other parties joined by PMSLIC.

Table 2 (below): Number of claims and suits filed by specialty, January 1, 1978-June 30, 1995.

Table 3 (page 44): Breakdown of PMSLIC claims and suits filed by specialty, January 1, 1978-June 30, 1995.

Individuals having questions or comments about this material should contact Jane L. Conley, director of medical research and statistics, PMSLIC, P.O. Box 8375, Harrisburg, PA 17105-8375, (717) 558-7500, extension 501.

TABLE 1: Number of cases in which a physician is joined as an additional defendant by a hospital or physician

Since beginning tracking joinder data on April 7, 1987, 135 PMSLIC insureds were joined by other parties through June 30, 1995, as follows:

PMSLIC Insured Joined by:	Number of Times:
Hospital	66
Other Physician	29
Nursing Home	4
Commercial Business	8
Plaintiff	4
Pharmacy/Pharmacist	10
Manufacturer	2
Drug Company	4
Other	8

TOTAL 135

During the same period, PMSLIC joined 22 other parties, as follows:

Party Joined by PMSLIC:	Number of Times:
Hospital	2
Physician	11
Drug Company	1
Manufacturer	5
Other	3

TOTAL 22

TABLE 2: Number of claims and suits filed by specialty from January 1, 1978-June 30, 1995

Specialty	Total Claims and Suits	Specialty	Total Claims and Suits

* Claims and suits filed during this period resulted from policy years 1978-1995. PMSLIC's limit of liability is \$100,000 per incident for policy years 1978-1982, \$150,000 for 1983, and \$200,000 for 1984-1995.

Keep in mind that the specialty totals are affected in part by the number of PMSLIC insureds in each specialty. In addition, some specialties are relatively new PMSLIC rating classifications and were not in existence for the entire time period represented.

Ferdinand L. Soisson Jr., MD, won his primary election bid for a seat on the Cambria County Board of Commissioners. A Johnstown gynecologist, Dr. Soisson is the Society's Eleventh District trustee and is serving his sixth term as State Society secretary.

The House of Representatives of the Commonwealth of Pennsylvania has recognized and honored **Robert S. Pressman, MD**, Philadelphia, for his outstanding accomplishments in the field of internal medicine.

Sucha O. Asbell, MD, was appointed chairman of the Department of Radiation Oncology, Albert Einstein Medical Center, Philadelphia.

Paul Jay Fink, MD, was appointed clinical liaison and senior consultant for Charter Fairmount Behavioral Health System, Philadelphia.

The United Way of Mifflin-Juniata has named **L. G. Guiser, MD**, Juniata County, as its 1996 chair.

The National Cancer Institute has named **Carl M. Mansfield, MD**, as associate director, Division of Cancer Treatment. Dr. Mansfield will be responsible for the Radiation Research Program.

The Institute of the Philadelphia Association for Psychoanalysis has appointed **Anita G. Schmukler, DO**, as a training and supervising analyst. Also, Dr. Schmukler was elected a councilor of the Association for Child Psychoanalysis for a three-year term, and a fellow of the American Psychiatric Association.

Joseph E. Imbriglia, MD, director of hand surgery and vice chairman of orthopedics, Allegheny General Hospital, Pittsburgh, has received the

25-year professional attainment award in the medical field from the School of Medicine Alumni Association, Hahnemann University, Philadelphia.

James M. Herman, MD, was named associate dean for primary care, Penn State's Milton S. Hershey Medical Center.

Doris G. Bartuska, MD, professor of medicine and director, Division of Endocrinology, Diabetes and Metabolism, Medical College of Pennsylvania and Hahnemann University, Philadelphia, has received the Alumnae/i Association Service Award.

Elisabeth Hasslacher, MD, associate attending psychiatrist, Institute of Pennsylvania Hospital, Philadelphia, was awarded the 1995 Exemplary Psychiatrist Award from the National Alliance for the Mentally Ill.

Robert H. Schreckengast, MD, an obstetrician/gynecologist from Scranton, was elected president of the Flying Physicians Association. The association is an international organization of multi-specialty physicians who are licensed pilots. They are dedicated to the promotion of safety, education, research, and human interest projects relating to medicine and aviation.

Peter Pizzutillo, MD, was appointed co-chief of the Section of Orthopedic Surgery at St. Christopher's Hospital for Children, Philadelphia, and professor of orthopedic surgery and pediatrics at Medical College of Pennsylvania and Hahnemann University School of Medicine, Philadelphia.

Bruce L. Thomas, MD, Huntingdon, was installed as governor-elect for the Western Pennsylvania Chapter of the American College of Physicians.

William M. King, DO, a family physician in Philadelphia, was appointed to the board of trustees of the Philadelphia College of Osteopathic Medicine.

Temple University Health Sciences Center, Philadelphia, has appointed **Joseph J. Kubacki, MD** chairman, Department of Ophthalmology.

James T. Hanlon, MD, McKeesport, was elected president of the Southwestern Pennsylvania Chapter of the American College of Surgeons.

Physicians Elected to Leadership Posts

Dr. Kroser

Lila Stein Kroser, MD, a Philadelphia family practitioner, assumed the presidency of the *Pennsylvania Academy of Family Physicians (PAFP)* in July. A graduate of Temple University and the Medical College of Pennsylvania, Dr. Kroser is in private practice with her husband in Northeast Philadelphia.

Other officers elected include: **Peter A. Cagnetti, MD**, Waverly, president elect; **Ronald J. Buckley, MD**, Allentown, vice president; and **Vernon H. Preston, MD**, York, treasurer. Also, **Mark D. Burd, MD**, Danville, was named speaker of the house, and **Michael E. Kordek, MD**, Laflin, was named vice speaker.

Newly elected to the board of directors are: **Marc S. Berger, MD**, Wyomissing; **Raymond S. Buch, MD**, Allentown; **Michael Cordas Jr., DO**, State College; and **Christine M. Stabler, MD**, Lancaster. Elected to the American Academy of Family Physicians Congress of Delegates are: Dr. Kroser, delegate, and **Neil Lesitsky, MD**, Albrightsville, alternate delegate.

Also at its annual meeting, PAFP named **Helen R. Gurson, MD**, Pittsburgh, as its 1995 Family Practitioner of the Year. The recipient of the Pennsylvania Medical Society's 1994 Volunteer of the Year award, Dr. Gurson is recognized for her efforts in fighting diabetes on the south side of Pittsburgh.

The *Pennsylvania Academy of Otolaryngology—Head and Neck Surgery*, has installed **Alan M. Miller, MD**, Norristown, as president, and **Barry E. Hirsch, MD**, Pittsburgh, as president elect. Also, the academy presented its highest honor, the Distinguished Service Award, to **Thomas L. Kennedy, MD**, director, Residency Program, and staff associate, Department of Otolaryngology, Geisinger Medical Center, Danville.

The *Lancaster County Medical Society* has installed the following officers: **Jeffrey H. Chaby, DO**, president; **Barry J. Zadeh, MD**, president elect; **John H. Garofola, MD**, secretary; and **Joseph Knepper, MD**, treasurer.

Dr. Gurson

Young Physicians Take Active Role at AMA

The Pennsylvania Young Physicians Section (PA-YPS) took five delegates and one alternate delegate to the 1995 AMA Young Physicians Section (AMA-YPS) Annual Meeting, June 16-17, 1995, in Chicago. We're proud to report that this was the largest delegation in the country to attend the meeting.

Highlighting the meeting was the election of Regina Benjamin, MD, from Alabama, as the first young physician trustee elected to the AMA Board of Trustees. Creation of the seat resulted from a resolution presented in 1994 by your Pennsylvania YPS delegation. The other contender for the position was Tama Abel, MD, of Michigan. Both physicians have been active in the YPS for quite some time.

The AMA-YPS adopted and forwarded several resolutions to the AMA House of Delegates:

- A YPS resolution on tobacco advertising and teenagers was merged with another resolution on licensing of tobacco vendors. The amended version directs the AMA to seek legislation that would restrict the display of tobacco products and would permit sales of tobacco only with sales assistance.
- A resolution regarding a study of the prevalence of hyponatremic seizures among infants fed bottled water was amended and adopted by the AMA House. The new resolution asks the AMA to work in collaboration with the American Academy of Pediatrics to address the issue.
- A resolution to adopt and support the modified definition of emergency medical services was referred by the AMA House to the Board of Trustees for further study.
- A resolution asking the AMA to seek a seat on the board of the

National Committee for Quality Assurance (NCQA) was referred for study by the AMA House.

- A PA-YPS resolution on developing legislation so third-party payers cannot rescind precertification after medical services have been rendered was sent to the House, where it was determined to be similar to existing policy and was reaffirmed.

- The House also reaffirmed a resolution asking the AMA to develop and disseminate model curricula on violence into undergraduate and graduate medical education, and develop legislation to oppose the denial of insurance coverage of victims of domestic violence.

The PA-YPS introduced two other resolutions for consideration at the AMA-YPS meeting:

- A resolution asking the AMA to support a patient confidentiality act was referred for study to the YPS Governing Council.

- A late resolution not accepted as business of the House asked the AMA to establish a nationwide physician insurance company. The author of the resolution plans to resubmit it at the YPS Interim Meeting in December, since the resolution received favorable response from the assembly.

Pennsylvania's own Martin D. Trichtinger, MD, ran against two other candidates for the position of member-at-large of the AMA-YPS Governing Council. Dr. Trichtinger was defeated by Brian Scott, MD, of Tennessee. We congratulate Dr. Trichtinger for a well-run campaign and a job well done. There was heavy competition for the position.

Finally, thank you to the following PA-YPS Governing Council members who attended the AMA-YPS meeting: Marlon T. Maus, MD; Chris W. Fellin, MD; Dr. Trichtinger; Mark A. Piasio, MD; and Stuart Gitlow, MD.

Remember: The PA-YPS will hold a meeting on Thursday, October 16, 1995, in conjunction with the State Society's annual business meeting. If you are interested in attending as a representative from your county, contact Christina Reese at the Society at (800) 228-7823.

The contributing author, William J. West Jr., MD, is chair of the PA-YPS Governing Council.

Young Physicians Fax-Back Response

The Young Physicians Section would like to hear from its constituency—your comments, questions, suggestions. Complete this coupon, and fax it with your thoughts/inquiries to Christina Reese at (717) 558-7842.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

For your copy of the **FREE** book on evaluating professional liability companies, call:

Hahnemann University School of Medicine, 1939; age 81, died May 24, 1995. Dr. Wire was a family practitioner. •

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Jonas E. Salk, MD, legendary immunologist and a past recipient of the State Society's Distinguished Service Award, died June 23, 1995, at the age of 80. Dr. Salk developed the polio vaccine which virtually wiped out the disease.

Dr. Salk received his medical degree from New York University in 1939. In 1942, after a two-year internship at Mount Sinai Hospital in New York, he went to the University of Michigan, and in 1947, he moved to the University of Pittsburgh. A year later, he joined with the National Foundation for Infantile Paralysis—now known as the March of Dimes—which had put together a committee of scientists to identify and type different strains of the polio virus. This vaccine was approved in 1955.

Dr. Salk moved to La Jolla, California, in 1962. Funded largely with March of Dimes money, he broke ground on the Salk Institute, which became one of the world's most respected research centers.

Dr. Salk spent the last 10 years of his life trying to develop a vaccine for AIDS. Although he was ridiculed by other scientists for seeking to boost the immune systems of those already infected with the human immunodeficiency virus, the concept ultimately took hold, and Dr. Salk has been credited with changing scientific thinking about AIDS.

Medical \$chool

It's back to school for some 6,300 medical students in Pennsylvania and you know the problem all too well — locking in their financing for the 1995-96 school year.

Be part of the solution. Consider a major gift to The Educational and Scientific Trust. A gift to the Medical Student Fund extends your helping hand to medical students for years to come.

There are many ways the Trust can help you reach your charitable goal: bequests, charitable remainder trusts, and gift annuities, to name a few. Often gifts of highly appreciated assets can avoid the capital gains tax.

For free literature on estate planning or to arrange your planned gift, call Bob Lamb at 1-800-228-7823.

THE EDUCATIONAL & SCIENTIFIC TRUST
of the Pennsylvania Medical Society

PHYSICIANS WANTED

Western Pennsylvania—Board certified or prepared emergency physicians needed for staffing a community hospital emergency department near the Ohio/Pennsylvania border. Please send CV to P.O. Box 91666, Cleveland, OH 44101.

Pennsylvania—Physician group seeks full-time and part-time physicians for an emergency department of community hospitals in central and western Pennsylvania. Please send resume to P.O. Box 91666, Cleveland, OH 44101.

Pittsburgh, Pennsylvania—Penn Group Medical Association (PGMA), a 100-physician multi-specialty group practice affiliated with the largest HMO in Pittsburgh, is seeking BE/BC physicians in: family practice, internal medicine, pediatrics, ob/gyn, and psychiatry. We are formally affiliated with major teaching hospitals and leading community hospitals in Pittsburgh. PGMA serves eight ambulatory care centers, all conveniently located near cultural, educational, recreational, and corporate activities. Excellent salary and fringe benefits. For confidential consideration contact: Angela Lascola, HealthAmerica, 5 Gateway Center, Pittsburgh, PA 15222, or call collect (412) 553-7502.

Emergency Physicians—Emergency Physician Associates is seeking quality ED physicians for a variety of practice opportunities. Director and staff positions are available. EPA contracts with hospitals in NJ, PA, MD, and NC for the provision of emergency medicine, urgent care and industrial/occupational health services. Our client hospitals are located in rural to urban areas with patient volumes ranging from 10,000 to 75,000. At EPA we offer physicians competitive compensation, flexible schedules and shifts, occurrence-based malpractice insurance, a variety of practice settings to choose from, cooperative working environments, and supportive medical directors and corporate staff. Interested candidates may contact EPA at (800) 848-EPA-1.

Part-time position available evening or weekends, modern urgent care center, N.E. Phila. Suburb. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Miller (215) 638-0666.

Dermatology Practice looking for Dermatologist to work full or part-time in Fountainville, PA. Affiliated with Doylestown Hospital. Please call (215) 230-8390.

Ideal Location—Growing, well-established, group practice in beautiful New Cumberland, PA, is seeking board eligible or board certified family practice physician/resident. Guaranteed salary, paid malpractice insurance, continuing education assistance, vacation time, health care package. Options include nursing home practice, hospital newborn care. Please send curriculum vitae to: Box 410, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

New Opportunity! IM and FP—Pittsburgh. Secure, well-established group. Four locations. One designated HPSP, excellent salary, bonus and benefits. Call Melissa McMurray at (800) 765-3055.

Position Available—Family Physician invited to join established group in our mission to provide whole-person care in beautiful rural westcentral PA. Christian staff includes 4 FPs and ancillary staff providing full range of family medicine, including OB, with a well-equipped office. 200+ bed high quality general hospital with good specialty relationships. A private non-profit Christ-centered social service agency is part of our health center. Women candidates encouraged to apply. We are developing academic rotations with area medical schools with opportunities for faculty and academic appointments. If you desire to grow in a biblical expression of your profession or want more information, contact: Stanley Lang, M.D., Agape Family Health Center, P.C., 216 Liberty Blvd., DuBois, PA 15801. (voice 814-375-1222, fax 814-375-9366)

New Openings Daily! FP, IM, PEDS, OB—Call now for details on Allentown, Lancaster, York, Cincinnati, Boston, Kansas City, Houston, St. Louis, Indianapolis, Columbus, Richmond, Rochester, Syracuse, Tampa, Miami, Cleveland, Detroit, Milwaukee, Chicago, Buffalo plus over 2000 rural communities. We track every community in the country. The Curare Group, Inc. (800) 880-2028. ID#C150MAB.

IM/FP Physicians—Founders Healthcare, Inc. is building a comprehensive primary care oriented, multi-specialty group practice with an adult focus as part of an expanding Graduate Health System primary care network. These positions report to Dorrit Sterner, M.D., Medical Director, and Gary Yeoman, D.O., Medical Director, respectively, in the modern PFMA building located in the northeast. BC/BE Internal Medicine or Family Practice physicians should contact Todd G. Kostrub at (215) 448-1539 or send your C.V. to Graduate Health System, 2129 Chestnut St., Philadelphia, PA 19103. Fax (215) 448-1568.

Family Practice Physician—Board certified or board eligible for private medical office northeast Philadelphia. Full or part-time. Respond Box 412, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Physician—Well established weight loss practice seeking several part-time physicians. A great employment opportunity with competitive wages. Offices located in Cambria, Westmoreland and Fayette counties. Call (412) 837-3737 for more information.

Cardiologist—Non invasive BC/BE, sought to join twelve-member privately practicing cardiology group in Southcentral Pennsylvania. Personnel Director, Suite 3, 1000 North Front Street, Wormleysburg, PA 17043.

Delaware County—B/C, B/E General Internist needed to join busy hospital based internists. Send resume and salary requirements to Box 413, PENNSYLVANIA

MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

POSITIONS WANTED

Seeking position in gastroenterology/internal medicine. Available now. Board certified in internal medicine. Board eligible in gastroenterology. British and U.S. trained, licensed in Pennsylvania. Contact S.P. Nathan, South Baltimore General Hospital, 3001 South Hanover Street, Baltimore, MD 21230, (410) 787-2728.

Board Certified Cardiologist wishes part-time position in outpatient clinical practice (Card/IM), stress testing, reading Holters, etc. Southeast Pennsylvania or New Jersey. Some IM acceptable. Box 408, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

MISCELLANEOUS

18th Annual British Virgin Islands Medical Conference, January 29-February 2, 1996, Prospect Reef Resort, Road Town, Tortola. For more information contact Virginia A. Riisberg, Butterworth Hospital, Grand Rapids, Michigan 49503. Telephone (616) 774-1290 Fax: (616) 752-2911.

Been There; (Almost) Done That

Herbert Perlman, MD

PPHP Makes Stock Offering

PPHP in late July made a stock offering to some 30,000 practicing physicians in Pennsylvania. A prospectus detailed the offering of 25,000 shares of Class A Common Stock at \$5,000 each and 40,000 shares of Class B Common Stock at \$1,000 each.

PPHP Class A shares were offered exclusively to licensed physicians, podiatrists, and oral surgeons practicing and maintaining their principal residence in the commonwealth; Class B shares were offered exclusively to purchasers of at least one Class A share. Regardless of the number of Class A shares purchased, each shareholder is entitled to only one vote.

In the 1980s, the State Society Board of Trustees, through its organization, the Pennsylvania Medical Society Medical Care Foundation, adopted as one of its goals, "Conduct a feasibility study for the establishment of a statewide HMO system, with a regional network of local individual practice associates (IPAs), organized by practicing physicians to enhance the physician's leverage in negotiating reasonable levels of reimbursement."

Initial efforts focused on evaluating Pennsylvania's Medicaid program. But, inherent in the Society's intention was the desire to *expand into other patient classifications*, such as private business companies and self-paying businesses. A feasibility study to develop an HMO in Central Pennsylvania for Medicaid patients began using members of the Dauphin and Cumberland county medical societies.

The State Society board authorized the foundation to provide consultation to physicians from those counties to develop the study. I was a member of that study—one of two or three physicians from Cumberland County.

We met often, under the tutelage of Dr. Robert Zelten, a Wharton School consultant. The charge to our committee—I believe named the Development Committee for the Pennsylvania Physicians Health Plan (then known as "PPHP")—was to work on forming an IPA and/or HMO with the following goals:

- 1) The plan would be physician owned and operated.
- 2) All interested physicians would be given an opportunity to participate.
- 3) The plan would include requirements to provide high levels of care.

In June 1983, the committee reported to the State Society board that the project was feasible, and recommended moving forward with further development of the plan. The board approved the goals and asked the Pennsylvania Physicians Health Plan to develop operational plans for both private and public marketplaces in Dauphin and Cumberland counties.

Further data was collected, and the Society board realized that a decision of such magnitude required action by the House of Delegates. And, in fact, a special session of the

House was held on Wednesday, March 28, and Thursday, March 29, 1984. At that time, the House rejected the concept of a State Society-owned HMO.

Those of us, like myself, who desired the Society to own a statewide HMO were, of course, disappointed. We believed that a physician-owned HMO could invest profits ordinarily given to shareholders back into the provision of health care, which would benefit both patients and providers. Further, we believed a State Society-owned HMO would dominate the market.

Still, we knew the idea of a physician-owned HMO was before its time. At that time, managed care did not seem to be just around the corner. We had "been there" and "(almost) done that."

Over the last several years, time, health care economics, insurance companies, and politics have caught up with the desired reality of the fee-for-service system. It is becoming increasingly obvious that the fee-for-service mechanism of payment for health care will ultimately be replaced by a system of rationing that is intrinsically necessary to successful operation of a managed care company.

But, physician providers have been given another chance. Because of the initiative by a group of physicians from across state, we once again have the opportunity for a physician-owned HMO in Pennsylvania also known as PPHP—the Pennsylvania Physician Healthcare Plan. Amazingly, and coincidentally, the name was born *de novo* just over one year ago. The founders of PPHP, when choosing a name, did not know of the earlier existence of the Society committee.

The Society board now supports and endorses the goals of a physician-owned HMO. Just as significant is the support, financial and with expertise, given by the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) through a newly formed company—Infinity Management Services, Inc.

It is time for the physicians of Pennsylvania to unite and work together in support of the new PPHP for a common cause—again, to the overall benefit of the providers and the patients.

Next year, let us be able to say, "Been there. Done that." ◊

Dr. Perlman, the Society's Fifth District trustee, is a member of the board of directors of the Pennsylvania Physician Healthcare Plan, Inc.

The Volvo 850 Turbo Sedan.

Accolades like "If you like to grin from ear to ear or feel great gobs of turbo-torque pushing at your back when you step on it, this car delivers,"* may be routine for Germany's latest high performance machines.

But they're anything but routine for the latest family car from Sweden.

Yet such is the blistering performance of the new front-wheel drive Volvo 850 turbo sedan.

A ROCKET FOR THE NUCLEAR FAMILY.

Where an explosive 222-horsepower in-line five complements Volvo's usual arsenal of safety features.

And where Car and Driver, contemplating Volvo's traditionally mild-mannered stance, is moved to write:

"Is this like discovering the Pope guzzles Bud and has taken up bungee jumping?"**

Drive safely.

VOLVO

Fair reimbursement.
Increased clinical autonomy.
Less hassle.

A responsive leap in the right direction.

12 Society's New President Is Realistic, Dedicated

Jonathan E. Rhoads Jr., MD, long-time speaker of the Society's House of Delegates, steps up to the president's post. Meet the man, and take a look with him at the year ahead.

20 Issues Move to House of Delegates

This month, your local delegates will be voting on some major organizational changes recommended by the Society's board. Among them: Should the Society remain unified with the AMA? How should the Society's internal structure be revitalized? This special "Policy Briefs" previews these and other issues.

“This is unbelievable.

Thirty minutes into our first meeting, it was obvious who was running the show, and he wasn't a doctor. He had

an agenda that wasn't anything close to mine. Sure, when they sold me the medical liability policy, they bragged about having physicians on their board. They told me to expect a fair review by my peers if there was ever a problem. Then came the malpractice suit. I'm really afraid I might lose this one, and not because of a bad medical decision. I wish now that I had protected my reputation and signed with PMSLIC. PMSLIC is doctor owned, doctor run. With PMSLIC, any claims brought against me would have been reviewed by physicians like me — physicians with a vested interest in the reputation of the

medical community — a reputation we all need to maintain, even safeguard. That would have made all the difference in the world to me. Because now, I'm really scared.”

CAT FUND SURCHARGE SET AT 68 PERCENT: The Society received word on September 28 that state Insurance Commissioner Linda S. Kaiser would impose a 68 percent emergency surcharge for the Medical Catastrophe Loss Fund (CAT Fund). A letter mailed to all Society members on the same day explains that though such a surcharge has never been levied before, Pennsylvania statute allows for one, if needed, to cover CAT Fund obligations. Monies collected will be used to settle approximately \$108 million in unpaid claims. The State Society and the Pennsylvania Medical Society Liability Insurance Company are offering a special loan program to Society members who do not have sufficient cash available to pay the surcharge by the due date. For more information about the loan program, call CoreStates Bank directly at (800) 762-5626.

SURCHARGE REVIVES TORT REFORM DEBATE: The recently announced CAT Fund surcharge calls legislative attention to the long-running liability tort reform debate. Representative J. Scot Chadwick (R-Bradford) on October 18 is expected to introduce legislation that would dramatically reform Pennsylvania's medical liability tort system. Drafted by the Society, the bill addresses such areas as expert witnesses, collateral sources, and "joint and several liability." The bill—not yet assigned a bill number—is being circulated on the hill for cosponsors. *THE SOCIETY URGES ALL PHYSICIANS AND ALLIANCE MEMBERS TO CONTACT THEIR STATE REPRESENTATIVES AND ASK THEM TO COSPONSOR THE CHADWICK MEDICAL LIABILITY BILL.*

WORKERS' COMP REGS FINAL(LY): More than two years after passage of the Workers' Compensation Act, regulations fully implementing the act's medical cost containment provisions have been approved. For physicians providing care to injured workers, the regulations clarify a number of issues relating to the delivery of services, reporting of services and claims submission, and the adjudication of claims.

Among the changes: a cap on medical fees at 113 percent of the 1994 Medicare allowance as of December 31, 1994; annual updates commencing January 1, 1995, equal to the percentage change in the statewide annual weekly wage (3.2 percent for 1995); bills are to be paid within 30 days unless there is a request for utilization review; changes to provider's codes shall occur only after discussion with the provider and within 30 days; utilization review processes and qualifications of reviewers have been strengthened to require the reviewer to be of the same specialty, board certified when performing reconsideration, and in active clinical practice of 20 hours per week or more; physicians may be held responsible for cost of reconsideration if found to be the losing party; and suspension of payment during review ceases after reconsideration if services are deemed necessary.

The Society will hold a series of seminars to help physicians cope with these and other changes. For additional information, call the Society at (800) 228-7823 or (717) 558-7750, extension 1448.

HCFA DELAYS IMPLEMENTATION OF NEW GUIDELINES: The Health Care Financing Administration (HCFA) has delayed until April 1, 1996, implementation of revised instructions for completing the HCFA 1500 claim form and new guidelines associated with claims that contain invalid or incomplete information. Xact Medicare Services notes that this is a *postponement*, not a *cancellation* of implementation. The April 1996 effective date pertains to assigned claims only; HCFA has not issued an effective date for non-assigned claims. Direct questions to the Society's Department of Medical Economics at (800) 228-7823 or (717) 558-7750.

MICHELE RIDGE IS HONORARY CHAIR OF ALLIANCE/TRUST PROGRAM: Pennsylvania's First Lady Michele Ridge has accepted the invitation of the Pennsylvania Medical Society Alliance and The Educational and Scientific Trust to serve as honorary chair of SAVE: Stop America's Violence Everywhere. The program, launched this year by the AMA Alliance, focuses on the nationwide problem of family violence. Mrs. Ridge was scheduled to speak at SAVE's October 11 rally in Harrisburg.

Lincoln's Words Ring True in DC

John W. Mills, MD
Medical Editor

"If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. It is true that you may fool all of the people some of the time; you can even fool some of the people all of the time; but you can't fool all of the people all of the time."

This quotation, attributed to President Lincoln as said to a caller at the White House, came to mind as I read of Congress's return to Washington, DC, this fall. They've taken their seats to deal with the October 1 budget deadline and to consider slashes in Medicare and Medicaid—even proposing HMOs for all Medicare patients—and, of course to posture for Election 1996.

As one listens and watches the politics in our nation's capital, Lincoln's words ring with truth. Election posturing and jousting is the real world of the legislator; meanwhile, they try to fool us into believing they are doing a superb legislative job. The system, as conceived by our constitutional forefathers, is workable without these political shenanigans. But the stakes played by our leaders are now so high that "service" seems to be a lost concept.

Observe the 1996 election races. Several top senators are running for president, yet they seem at odds with the House of Representatives at a time when the nation needs leadership, direction, and unity of purpose. Political posturing they call it—just the type of thing Mr. Lincoln had in mind.

Then there is the matter of the debt ceiling, which seems more easily reached each time. Our politicians blame entitlement programs and high medical costs, which no doubt do play a role in any honest appraisal of our nation's finances. But add up congressional and presidential perks and junkets, and see where the waste really is.

The federal budget has become a favorite political football to toss to and fro, each party maneuvering to avoid the toss of the ball when the federal government

shuts down because a budget wasn't passed. Who suffers then? We all do—with our elderly, poor, and retired taking the biggest hit. That doesn't resemble serving the public at all or putting country ahead of personal gain. It would seem prudent to really come to grips with the more thorny issues on a bipartisan basis rather than kick them about the football field.

The cuts for Medicare and Medicaid have yet to be fleshed out, but it's a safe bet that patients and their physicians will come out on the short end. HMOs for Medicare patients may very well bring on more cost shifting, as they seek to cover the elderly and their myriad of ills by raising premiums to young and healthy policyholders.

Preventive medicine in an elderly population is of little benefit; we are a long way from the Utopia envisioned by HMOs where preventive medicine and the resulting healthy lifestyles will be translated into a Medicare population with no problems except the aging process. Standardization of care and "cookie-cutter" medicine have little application in a diverse elderly population.

The changes we've experienced through the evolution of managed care have helped squeeze out the "fat" and made us more efficient. But social change takes much longer—and allowances have to be made for that. They're just now realizing that the squeezing process has gone too far in some areas—24 hours or less maternity care and extremely short post-op days with some bad results. Legislation has been passed in some states to limit these inappropriate health insurance company/HMO mandates. Squeezing can go only so far; it's not infinite!

All physicians have concerns about the HMO squeezing process, about the budget football, about our Medicare patients. Let Congress know your concerns, and be serious about them. We owe it to our patients to keep President Lincoln's words in mind—don't let ourselves be fooled any of the time. Speak out. ◊

**ALL THE PHYSICALS CONFIRM
THAT WE'RE
IN MIGHTY GOOD SHAPE.**

Examine our performance and you'll agree. Membership was up again last year, passing 18,000. Total premiums written surpassed \$193 million. Policyholders' surplus in excess of \$61 million. Healthy numbers, confirmed by insurance auditors. We have a strong financial position, increasing market share and competitive pricing. A solid foundation for your future.

Thanks for a Great Year

John H. Hobart, MD

With this month's annual business meeting of the House of Delegates, the Pennsylvania Medical Society begins its own New Year, with new priorities, new officers, and new challenges. The passing of the old year into the new is a time of reflection and gratitude, so if you will indulge me for a few moments, I'd like to recall with you some of the achievements of the past 12 months that have benefited our profession and our patients.

Perhaps one of my most treasured gifts from my year as president is a t-shirt presented to me at a meeting of the Montgomery County Medical Society. This was no off-the-rack number, either. It was custom designed for the officers and key staff of the State Society, and the letters on it read: "This spring, I earned 18 million dollars and gave it all to my friends. What have you done?"

The shirt was alluding to a Society court victory of enormous long-term consequence—a challenge to the Pennsylvania Department of Public Welfare's refusal to pay physicians, from the commonwealth's Medical Assistance program, the copayments and deductibles they should have gotten all along for their low-income, elderly patients eligible for the Qualified Medicare Beneficiary (QMB) program.

As a direct result of our State Society's successful court case, Pennsylvania physicians are rightly receiving millions of dollars in copayments and deductibles. As I write this, the figure has gone far beyond the number on my t-shirt. It's now \$30 million or better, and will continue.

There were many other achievements we can rightly celebrate together. The Society is actively promoting the development of physician organizations throughout Pennsylvania to place physicians in a strong position as managed care matures. We are supporting these efforts both through our newest subsidiary, the PennMed Member Services Company (PMSCO), as well as through the Society's own outreach efforts.

Our Society provided you with a sample letter that you could use to explain some of the problems of managed care policies in the event you were, in the euphemism of the moment, "de-selected" from the plan that covered some of your patients. We asked you for examples of quality problems that arose from managed care policies, and you responded with information that has already proven of great use in our contacts with legislators and others.

I have had the privilege of outlining our concerns for our patients' well-being under managed care, and I am pleased to be able to report that some of our elected representatives have actually thanked us for these insights.

With regard to an issue that has been at the core of my professional efforts for many years, we have been persistent and untiring in our efforts to seek meaningful tort reform. At the moment, most of our efforts—and those of others—are behind the scenes, which is where they need to be right now. But you can rest assured that we are working where you cannot, in the informal but important forums where the stage is being set for future activities.

Finally, this month our House of Delegates will receive recommendations regarding changes in unification and the eligibility requirement for the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), in an effort to streamline and strengthen our Society, which must become an even more effective advocate for all Pennsylvania physicians in the future. I look forward to further opportunity to share my thoughts on these initiatives with delegates at the annual business meeting.

We've had some tough moments in the last 12 months, no doubt about it. But we need to keep our eyes on our strengths, our victories, and our profession. When it comes right down to it, I can't think of any other profession in which I would rather serve. And despite the challenges still before us, I'll bet you say the same.

Thanks for a great year. ○

Keep your practice in top financial health

The Midlantic Medical/Dental Banking Group was created to meet the unique needs of health care professionals. Whether you're in a new practice, an established one or buying into a group, we can help keep you financially fit. From securing a loan for new equipment, working capital or leasehold

improvements, to providing one-on-one consultations, our experts have the banking prescription you need. For more information and a free copy of "A Complete Financial Services Program for Health Care Professionals," call **1-800-633-0040** or **(908) 632-6545**.

MIDLANTIC®

Service. We didn't invent it. We're just trying to perfect it.™

AUTHOR SEEKS STORIES OF MEDICAL ETHICS IN PRACTICE

I am working on a book on medical ethics and would like to enlist the help of other physicians to answer this question: Have you ever faced an ethical dilemma, and if so, how did you resolve it?

I am interested in all aspects of medical ethics—human experimentation; ethics of reproductive technology; abortion; medical treatment of the uninsured and poor; malpractice; physician-assisted suicide; the right to die (why some doctors do not honor living wills); genetic counseling; genetic manipulation; euthanasia; kidney, lung, and heart transplant; use of fetal tissue; or any other situation concerning an ethical dilemma.

Please reply to: Claude A. Frazier, MD, 4C Doctors Park, Asheville, NC 28801.

*Claude A. Frazier, MD
Asheville, North Carolina*

Prompt Grassroots Response Is Effective

A legislative “call to action” was sent early in September by the AMA to nearly 20,000 physicians and students, urging them to take steps to oppose proposals calling for reductions of up to 50 percent in Medicare Graduate Medical Education (GME) payments.

The letter warned that major cuts in GME payments “could translate into appreciable cuts in faculty and specialty program slots, decreased pay for resident physicians, and an overall drop in the quality of education for residents and health care services for our patients.” It also urged immediate grassroots action, as Medicare would move quickly in the next few weeks.

In mid-September, Representative Nancy Johnson (R-CT) circulated a revised GME reform proposal that addressed many—though not all—of the AMA concerns. Her new plan moved closer to the position of the AMA as contained in the AMA’s plan, “Transforming Medicare.”

As the budget debate continues, GME continues to be a target for budget cutters. But quick physician responsiveness has enabled the AMA to have a definite influence on this legislation.

Society's New President Is Realistic, Dedicated

Maria T. Montesano
Assistant Managing Editor

For almost a decade, one physician leader, Jonathan E. Rhoads Jr., MD, has stood before the 400-plus members of the Pennsylvania Medical Society House of Delegates—first as vice speaker and then as speaker of the House. This month, Dr. Rhoads will step into a new role, as the Society's 146th president.

Medicine may not be what is used to be, but, when it comes right down to it, Jonathan E. Rhoads Jr., MD, still likes his career choice. "I like seeing patients get well, seeing patients come in with serious problems and successfully dealing with them," he says. "I think that's very gratifying."

Dr. Rhoads will be inaugurated as the State Society's 146th president this month at the Society's annual business meeting in Hershey. A native of Philadelphia, he credits "an old physician member of the community" for urging him into medicine. "He

said to me, he thought I should be a doctor, that I'd be a good one. That made a certain impression on me."

His father, Jonathan Sr., a prominent Philadelphia surgeon and past recipient of the Society's Distinguished Service Award, surely also impressed his son. But it wasn't his father's accomplishments that Dr. Rhoads remembers. Instead, he credits him as a "dramatic" role model because, "He never pressured me. He just was busy and happy in his work."

A graduate of Germantown Friends School, Philadelphia, and magna cum laude from Haverford College, Dr. Rhoads earned his medical degree from Harvard Medical School in 1964. Following a rotating internship at Cincinnati General Hospital, he spent two years in the U.S. Public Health Service at the Medical Center for Federal Prisoners in Springfield, Missouri. He then returned to Cincinnati to complete residencies in surgery and thoracic surgery.

These days, Dr. Rhoads is chairman of the Department of Surgery and director of

JONATHAN E. RHOADS JR., MD
146TH STATE SOCIETY
PRESIDENT

BORN:
September 20, 1938

MEDICAL SCHOOL:
Harvard Medical School, Boston, Massachusetts

SPECIALTY:
Thoracic Surgery

CURRENT POSITIONS:
Chairman of surgery and director of the Surgical Residency Program, York Hospital; clinical professor of surgery, University of Pennsylvania, Philadelphia, and Penn State's College of Medicine, Hershey; clinical associate professor of surgery, Medical College of Pennsylvania, Philadelphia.

STATE SOCIETY SERVICE HIGHLIGHTS:
Delegate, Pennsylvania Delegation to the AMA; former speaker, House of Delegates; member and former chairman, Committee on Long Range Assessment; former chairman, Council on Membership.

the Surgical Residency Program at York Hospital—two positions he has held for the past decade. He and his wife, Julia, have three daughters.

A changing world

Active in organized medicine throughout his 30-year career, Dr. Rhoads has seen many changes in the business of medicine. In fact, just one year after he graduated from medical school, Medicare was enacted.

"In those days, there were a lot of elderly patients who were ward patients or service patients because they didn't have any money. Residents pretty much took care of them, with a certain amount of supervision from the attending surgeon. Since Medicare came into place, all these people became private patients," he says.

"Then, along with the growing costs of medical care as technology advanced, there seemed to be changing willingness to pay for it...Cost controls have come as costs escalated, and of course, people learned how to contract and negotiate lower prices and put utilization controls on the system."

It is the application of these specific business principals to the practice of medicine that is most frustrating to physicians today, according to Dr. Rhoads, along with the loss of autonomy for the physician. "Some of us no longer have the say-so in how patients are treated, because the people paying for their care are having more and more of a say." Dr. Rhoads adds, "There's a real concern that that may be compromising patient care."

These types of "outside" activities increasingly generated by "outside" agencies—including legislators, regulators, and third-party payers—impact so heavily on the practice of medicine that no one physician can deal with his or her problems alone. "These activities are very tough on doctors," Dr. Rhoads says, "and physicians need organizations to stand up for them...the AMA, the State Society, and specialty organizations...."

But people in general just aren't joining groups anymore, surveys tell us. That

"I believe that the public still wants the best medical care we as physicians know how to give. We should continue to dedicate ourselves to deliver the best care we know how to give, recognizing the tremendous irony that the quality of medical care is better than it has ever been before and the emoluments for physicians are being eroded."

statistic in itself poses challenges to the Society's newly inaugurated president.

Dr. Rhoads lists these challenges for his year as president:

- to try to achieve a sense of unity among the physicians in Pennsylvania,
- to try to boost membership in the Society, and
- to come to grips with specific legislative initiatives that arise.

Though the content of Dr. Rhoads's annual business meeting speeches is still under wraps, he says his speech before the House of Delegates will "probably have some specific recommendations" related to the challenges ahead.

Meanwhile, he says, his inaugural speech will be more "philosophical"—hinging on the idea that even though there are many changes and frustrations associated with medicine, physicians can still make a difference—both on the political front, as well as with individual patients.

He offers this advice to the 18,000-plus members of the Pennsylvania Medical Society:

"I believe that the public still wants the best medical care we as physicians know how to give. We should continue to dedicate ourselves to deliver the best care we know how to give, recognizing the tremendous irony that the quality of medical care is better than it has ever been before and the emoluments for physicians are being eroded." ❧

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania and beyond.

This ongoing column updates Pennsylvania physicians on the state of managed care in the commonwealth and nation. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

1 Blue Cross of Western Pennsylvania has announced plans to begin operating eight health care facilities to offer its customers "one-stop shopping" for their routine medical needs. Proposed locations: Green Tree, Harmar, McCandless, Monroeville, Moon, Robinson, Squirrel Hill, and West Mifflin. [*Pittsburgh Post-Gazette*]

Society reports indicate that Blue Cross of Western Pennsylvania has become a highly aggressive competitor. Evidence of this includes: an exclusive contract with the University of Pittsburgh, which had previously also offered HealthAmerica; merger negotiations with Pennsylvania Blue Shield; the introduction of its own Medicare HMO, SecurityBlue; the purchase of Premier Medical Associates, PC, the region's largest private, multispecialty group practice; and possible purchase of numerous other practices in the region. In addition, six hospitals have been given preference by Blue Cross in exchange for lower prices.

Mercy Hospital of Pittsburgh, a member of the Pittsburgh Mercy Health System, is working to expand its base of primary care physicians by opening a practice with offices in Wexford and Green Tree. Pittsburgh Internal Medical Associates is staffed by four physicians trained in internal medicine. [*Pittsburgh Business Times*]

5 York Health Plan is planning to join Gettysburg Hospital and Chambersburg Hospital in forming a preferred provider organization called SouthCentral. Established by York Hospital in 1991, York Health Plan provides health care services to employees of large, self-insured employers. Unlike the York Health Plan, the hospitals forming SouthCentral would assume financial risk in caring for members. [*Sunday Patriot-News, Harrisburg*]

Approximately 350 Lancaster County physicians are working together to form the Lancaster Physicians Practice Corporation, a countywide physician organization that the physicians hope will result in more control over patient care and fairer reimbursement. [*Sunday News, Lancaster*]

Capital Region Health Network and Keystone Medical Systems, Inc., have reached an agreement that Capital will provide its participating physicians with access to Keystone's practice management software system. In addition to offering physicians the benefits of volume pricing for both hardware and software, Capital will serve as an intermediary for software support and training. [*Keystone Medical Systems press release*]

Albuquerque-based Horizon Healthcare Corporation has completed its merger with Continental Medical Systems, Inc., of Lower Allen Township. The merger creates the nation's largest specialty health care services company. [*Patriot-News, Harrisburg*]

6 The physician group of Mori, Mori, Preate Associates, Ltd., will merge with Surgical Group, Inc., to form Delta Medix, PC, according to Gino Mori, MD, president of the new firm. The merger forms the largest practice of its kind in the region, with 12 physicians specializing in urology and surgery. [*Sunday Times, Scranton*]

8 Great Valley Health, Main Line Health System's physician practice management organization, almost doubled its physician membership over the summer to 18 practices with more than 30 physicians. Membership is expected to double again by the end of this month. [*Great Valley Health press release*]

Cancer Recovery, Inc., Fort Washington, is consolidating oncology practices and establishing a chain of postoperative cancer treatment centers to provide cancer diagnosis and treatment services to managed care companies' subscribers. [*Philadelphia Business Journal*]

U.S. Healthcare founder Leonard Abramson has relinquished responsibility for the managed care company's day-to-day operations to focus on expanding its efforts in medical systems management. Abramson hopes to develop computer hardware and software to link doctors and hospitals, process patient information, and analyze treatment outcomes to gauge the effectiveness of care being developed. As reported last month, Michael J. Cardillo and Joseph T. Sebastianelli will comprise the company's new "office of the president." [*Philadelphia Business Journal*]

► Main Line Health System and Thomas Jefferson University have signed agreements to officially establish Jefferson Health System, which includes Bryn Mawr Hospital, Bryn Mawr Rehab, Community Health Affiliates, Lankenau Hospital, and Paoli Memorial Hospital. Paul C. Brucker, MD, chairman of the board of the new health system, says Jefferson Health System "will remain community based, decentralized, and collaborative, rather than one based on acquisition and central control. It will use its strengths to enhance cost-effective delivery of care and extend the best medical practices throughout the system, integrating research and education in this process." *[Main Line Health System/Thomas Jefferson University press release]*

► The Ridge administration next year will require all 650,000 Medicaid recipients in southeastern Pennsylvania to join a managed care plan to obtain medical services. The state Department of Public Welfare hopes to begin the bidding process for managed care plans this fall; client enrollment is expected to begin in July 1996. State officials anticipate

one day enrolling all of Pennsylvania's 1.6 million Medicaid recipients in managed care plans. *[Patriot-News, Harrisburg]*

► Graduate Health System has announced the sale of its HMO, Greater Atlantic, to Health Systems International, based in California, for \$100 million. Greater Atlantic, one of the four largest HMOs in the Philadelphia area, serves more than 98,000 members. Further, it recently made the move into northeast Pennsylvania. *[Philadelphia Inquirer]*

► Oxford Health Plans, Inc., which owns OakTree HMO in Philadelphia, said its second-quarter earnings rose 91 percent and revenue more than doubled because of increased enrollment in managed care programs. Oxford's earnings rose to \$12.2 million from \$6.4 million a year earlier; revenue jumped to \$390 million from \$158.1 million. Oxford is based in Norwalk, Connecticut. *[Wall Street Journal]*

Facts, figures, etc.

• The Sachs Group predicts that by 1999 hospital inpatient days may

drop 34 percent, with a drop of as much as 49 percent in the northeast and as little as seven percent in the west. The study was based on inpatient utilization data from a California group-model HMO. *[Modern Healthcare]*[†]

• A Georgetown University study found that hospital costs increase at a slower rate in areas with high managed care penetration—defined as HMO care for at least 15 percent of the population. In those areas, costs per admission rose 8.3 percent during the length of the study, compared to 11.2 percent in other areas. *[Managed Care Outlook]*[†]

• The Group Health Association of America predicts that managed care enrollment will increase 9.6 percent this year to reach 56 million, resulting in a total five-year gain in HMO enrollment of 53 percent. *[BNA Managed Care Reporter]*[†]

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

physicians to sign contracts that would make them part of Aetna's Long Island health care plan. The complaint, filed in federal court, says the physicians were coerced into signing the contracts when Aetna threatened to cut hospital relations if they didn't sign. [*New York Times; USA Today*]

- New York Governor George Pataki signed legislation in late August requiring HMOs to offer policies allowing individuals to use physicians of their choice and not only those who are members of their HMO network. The law does allow for additional deductibles and copayments for using non-network physicians, but caps out-of-pocket payments by policyholders at \$3,000 a year for individuals and \$5,000 for families. The law also requires managed care plans to offer standard comprehensive plans that cover prescription drugs, inpatient and outpatient hospital services, preventive health care services, and emergency services. [*New York Times*]

- Healthcare America, based in Austin, Texas, is selling part of its assets for \$85 million to Liberty Capital Partners, a New York investment group, to help relieve its heavy debt load. The sale includes all of Healthcare's behavioral health hospitals, but does not include its two medical surgical hospitals and certain facilities leased to third parties. Healthcare's board has also approved a plan to restructure its debt, which now totals \$212 million. [*New York Times*]

- Blue Cross and Blue Shield Association has unveiled HMO-USA, a nationwide Medicare managed care network that unites its member plans to extend Medicare managed care coverage across state lines. Fifteen independent plans have agreed to participate in the network that will allow Medicare beneficiaries to receive comparable medical care by Blues plans in 45 states. [*Chicago Sun-Times*][†]

- The Group Health Association of America has announced plans to offer a new membership category for

physician groups that will eventually spin off into a separate organization. The association's officials have also confirmed that a merger with the American Managed Care and Review Association is imminent and that the two groups will vote on the merger this fall or winter. [*Modern Healthcare*][†]

- The Colorado Physicians Network, developed in conjunction with the Colorado Medical Society, has announced a joint venture with Rocky Mountain HMO, a physician-friendly HMO with 76,000 covered lives, to develop a statewide, physician-governed managed care network. The program, which will be open to any medical society member who passes standard credentialing, expects to be operational early in 1996. [*Denver Post*][†]

- Humana, Inc., one of the country's largest HMO operators, has agreed to buy the Emphesys Financial Group, a health insurance company based in Green Bay, Wisconsin, for \$650 million in cash. Emphesys, which has two HMOs, offers most customers various kinds of physician networks. [*New York Times*]

- An association of Florida workers' compensation claimant attorneys is proposing an "any willing provider" amendment to the Florida constitution that would prohibit insurance companies and HMOs from limiting enrollee choice of provider. [*Florida Healthtrac*][†]

- Efforts by Health Care Network of Wisconsin, the state's largest employer purchasing coalition, to form an entity to allow small employers to purchase health care at lower costs, have fizzled. Large health plans balked at the plan because it permitted employees—not employers—to select plans based on a fixed monthly contribution, and the large plans were concerned that they would attract high-risk patients. Although some small plans in the state were interested, the plans were not well known among health care purchasers. [*Managed Care Outlook*][†]

- Tufts Associated Health Plans, Inc., Waltham, Massachusetts, said its stockholders had approved a proposal to spin off Managed Comp, Inc., a managed care division for cases involving workers' compensation. [*Wall Street Journal*]

Members' Outcry Heard by Medicare Regulators

Another potentially cumbersome Medicare regulation has been modified through the efforts of the State Society and many individual physicians. Xact Medicare Services in August revised the reporting instructions for medical and surgical services rendered in conjunction with the use of implantable and invasive devices.

In the June 1995 *Medicare Report*, physicians were instructed to report the Food and Drug Administration (FDA) approval number, manufacturer name, and manufacturer model number for any medical device used in conjunction with a variety of surgical and invasive diagnostic services, effective for claims with dates of service on or after August 1, 1995.

Responding to calls from members irate about this latest burdensome paperwork, the State Society protested to Medicare, making it clear that the regulations imposed a huge burden on practices to not only collect the data, but also to make billing software changes.

As of August 21, Xact stopped requiring the new information. Physicians are no longer required to report this information on Medicare Part B claims submitted, and any services which were denied for the lack of approval information will be automatically reviewed and, where appropriate, adjusted for payment. No action is necessary on the part of physicians. Xact Medicare Services notified the entire physician community of the change in mid-September 1995, via *Medicare Report*.

Records still required

The regulators note that, while this claim reporting requirement has been modified, physicians still must know the FDA approval status of any device used, and should also have timely access to the necessary FDA and manufacturer information. Xact Medicare Services will be conducting periodic, random record reviews during which physicians will be required to supply the FDA approval number, manufacturer name, and

manufacturer model number for the devices used in conjunction with the service under review.

The record reviews will be performed for implantable and invasive devices used in conjunction with a specific range of surgical and invasive diagnostic procedure codes. The most current and updated list of services subject to these reviews are described by the following CPT-4 procedure codes or code ranges: 33200-33249, 33405, 33426, 33427, 33464, 92980-92996, and 93501-93652.

Xact also reminds physicians that, even though the record reviews will be limited to these services, all devices used in the treatment of Medicare patients must be FDA approved in order for Medicare to make payment for any related medical or surgical services. (Refer to chapter 6, section 6.4 of the *Medicare Part B Reference Manual* for detailed information on patient pre-notification.)

Non-approved devices

If a physician renders services in conjunction with the use of non-FDA-approved devices, those services should be submitted to Xact Medicare Services for denial. In these cases, physicians must report the statement, "non-approved device," in the narrative portion of an electronic claim or include an attachment to the HCFA 1500 (12-90) claim form.

If the patient has been pre-notified that these services will not be covered by Medicare, the physician should also report procedure code modifiers BA (use for services rendered prior to October 1, 1995) or GA (use for services rendered on or after October 1, 1995) on any billed services related to the use of the non-approved device. A statement indicating non-approval must also be provided.

Effective with date of service August 1, 1995, if this information is not listed in the narrative field for electronic claims or in block 19 of the HCFA 1500 claim form, the service will be denied. If you are seeing the patient for a diagnosis unrelated to

the services in regard to the device, file a separate claim for those services.

Physicians who are unsure of the FDA approval status of a given device can contact the FDA Device Approval Line at (301) 443-4190. For more information about the revised policy, physicians should call Philip Pennington, vice president, Xact Medicare External Services, at (717) 730-5898, or Gail Rounds, manager, Xact Medicare Professional Services, Eastern District at (609) 896-0670.

HHS TARGETS FRAUD WITH NEW PROGRAM

The U.S. Department of Health and Human Services (HHS) has begun a new program, "Operation Restore Trust," in an effort to combat health care fraud, waste, and abuse in the five states with the highest Medicare expenditures.

According to HHS, recent reports and investigations have shown home health care and nursing facilities to be particularly susceptible to fraud and abuse.

HHS is designing an interdisciplinary project team of federal and state government and private sector representatives to target Medicare abuse and misuse in California, Florida, Illinois, New York, and Texas. Together these states account for 40 percent of the nation's Medicare and Medicaid beneficiaries and recipients. The team will focus on home health care, nursing home care, and durable medical equipment suppliers—three of the fastest growing areas in Medicare.

HHS plans to reinvest funds generated from health anti-fraud activities to fund expanded enforcement by creating a Health Care Fraud Control Reinvestment Fund. The fund would be sustained by money awarded by the courts in Medicare fraud cases. In the home health industry, this fraud has included billing for excessive services or for services not rendered, the use of unlicensed or untrained staff, falsified plans of care, forged physician signatures, and kickbacks.

In nursing homes, the HHS inspector general has found significant evidence of inappropriate payments and overuse of services, which increases the financial burden on beneficiaries and the Medicare and Medicaid programs.

With disability insurance this affordable, can you afford to be without it?

Your ability to earn an income is your most precious asset. So if you've been putting off disability coverage because it's too costly or difficult to find, here's good news:

You can now protect yourself and your family with top-quality disability coverage through the Pennsylvania Medical Society and its endorsed broker, Colburn-Bertholon-Rowland (CBR). And thanks to the society's purchasing power, you can select between non-cancelable or guaranteed renewable

policies, at highly affordable group rates.

When you choose CBR, you'll be covered by a carrier rated "A" or better by A.M. Best Company. And, you will have the added advantage of being insured for your "own occupation".

You'll also enjoy the convenience of working with CBR, a company that has been serving the insurance needs of Pennsylvania professionals for over 65 years.

ACTIONS OF THE BOARD OF TRUSTEES, SEPTEMBER 12-13, 1995

HOUSE TO RECONSIDER AMA MEMBERSHIP REQUIREMENT

The Society's board at its September meeting endorsed a proposed bylaws change to remove the requirement for members of the State Society to also become members of the AMA.

Pennsylvania became a "unified" state with the AMA following bylaws changes in 1989. Sentiment for unification was widespread and supported by various Society units, including the board and the Pennsylvania Delegation to the AMA. The overriding contention was that unification was necessary to assure a strong national organization that could effectively represent the concerns of physicians and their patients.

At the time of unification, nearly 85 percent of the House of Delegates were already AMA members, as were approximately 72 percent of the entire membership. The vote of the House was 74 percent in favor of unification.

Benefits of the link included additional delegates to the AMA House; reimbursement and dues incentives; membership development assistance; and enhanced services to staff on mutual projects, including regulatory appeals and negotiations.

At present, five states—including Pennsylvania—are unified with the AMA. The Society's Council on Membership continues to track the opinions of members, former members, and potential members regarding the issue.

In a poll conducted for the Society's Membership Driven Process Review Panel, 71 percent of respondents stated that membership should *not* be mandated at all levels—county, state, and national. When asked what it would take to encourage potential members to join the Society, 33 percent of respondents said freedom to choose membership with the AMA was an issue, while 20 percent cited the amount of dues.

The Council on Membership also recognizes that many reasons lie behind an individual's choice to join or remain a member of any organization.

Considering these findings and factors, the board accepted the

council's recommendation to support a bylaws admendment eliminating the AMA membership requirement at this month's meeting of the House.

PROPOSAL WOULD CHANGE PMSLIC MARKETING STRATEGY

Board of Trustees Report 28, to be considered by the House this month, proposes permitting the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) to write professional liability insurance policies for physicians who are not State Society members.

Current policy allows PMSLIC only to insure Society members. But changes in the medical marketplace are making it more difficult for the Society's largest subsidiary to remain viable under such constraint.

Finalized by the board in September, the report addresses several resulting issues—including membership ramifications—and outlines PMSLIC's commitment to developing a financial plan to "minimize any potential adverse impact from loss of dues income as a result of elimination of the eligibility rule."

For commentary on the recommendation and the history of the requirement, see "Defending Good Medicine" on page 44.

SOCIETY RAISES CONCERNS ABOUT CRNP ADVISORY

The State Society has raised concerns with the Pennsylvania Department of Health about a department advisory on the scope of practice of certified registered nurse practitioners (CRNPs).

Released mid-summer, the advisory was sent to HMOs and the Department of Public Welfare as guidance regarding the use of nurse practitioners in managed care plans. It is the result of an audit of HMO activities and a request for clarification of the role of nurse practitioners as plan gatekeepers.

In dealing with this ongoing issue:

- The Society has asked the State Board of Medicine to look at nursing scope of practice issues.
- The board authorized the appointment of a quick response committee.

The department says it plans to revisit this and other HMO-related issues when it begins to amend existing HMO policy through regulations. The new Society committee will be formalized in time to respond immediately to newly proposed amendments and regulations.

- The Society has scheduled a mid-October meeting with the Department of Health to discuss the issue further.

DELEGATES TO VOTE ON VITAL ISSUES

In other action, the board finalized several reports for consideration by the 1995 House of Delegates. Among them:

Restrictive Covenants—Report 6, a result of studies of the need for a regulation of restrictive covenants in medicine, concludes that current Pennsylvania law is a reasonable compromise to balance the competing interests of new versus established physicians.

Credentialing—Report 8 proposes that the Society work with PMSCO, third-party payers, hospitals, and managed care plans to streamline the credentialing process.

Membership—Report 14 responds to a 1994 House action to "establish a committee to propose membership enhancements for unified states to the AMA."

After lengthy research and study, as well as meetings with AMA officials, the committee concluded that "further material enhancements for unified states could not be expected from the AMA."

Full Disclosure Statement: All faculty participants in continuing medical education programs sponsored by The Medical College of Pennsylvania and Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Statement of Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. The Medical College of Pennsylvania and Hahnemann University designates 1.0 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association for each hour of attendance at these continuing medical education activities.

This program is eligible for 1.0 credit hour for each hour of attendance in Category 2A of the American Osteopathic Association.

FUTURE ROLES IN QUALITY, TECHNOLOGY STRATEGIZED

At its September meeting, the Society's board heard reports from the Commission on Continuing Medical Education suggesting ways the Society can take a leadership role in addressing the future of quality care in a managed care environment.

Questions have been raised as to who is going to set future standards of care in managed care organizations, how credentialing and utilization criteria have been developed, and the basis of current criteria. Investigation will continue into possible initiatives with other Pennsylvania health care entities.

In a related discussion, the board reviewed a report on the development of Community Health Information Networks (CHINs) in Pennsylvania. A CHIN is defined as a communications infrastructure that will allow health care-related organizations to exchange both patient and financial data. Through CHINs, patient records and test results can be electronically transferred from physicians' offices to other treatment facilities. The goal is to improve patient treatment while avoiding duplicate diagnostic testing. Financial transactions and billings may also be included.

CHIN organizers are at work in many other states. In Pennsylvania, the Technologies Council of Central Pennsylvania has been working through a series of four focus groups, and the Pennsylvania Information Highway Consortium (PIHC) is exploring statewide feasibility of a CHIN.

The board approved Society representation on PIHC. In addition, demonstration of a CHIN will be offered as part of a workshop, October 26, sponsored by the Hospital Medical Staff Section in conjunction with the Society's annual meeting.

DOMESTIC VIOLENCE VIDEO PRODUCED BY ALLIANCE

The Pennsylvania Medical Society Alliance, in a venture with the Society's Educational and Scientific Trust, is producing a videotape program featuring Christine Dotterer, MD, a family practitioner from Sunbury, concerning domestic violence and its consequences.

Dr. Dotterer recounts her experiences and insights as a former

victim of domestic violence and as a physician deeply committed to promoting public as well as practitioner education into this important social ill.

The videotape will be available free to county alliances and marketed to others outside the State Society.

COLA OFFERS ANSWERS VIA FAX TO QUESTIONS ON CLIA

Thirty-three comprehensive fact sheets on commonly asked office laboratory questions and CLIA '88 regulations are now available free of charge via same-day fax to physicians and their staffs through the Commission on Office Laboratory Accreditation (COLA).

The service, made possible through an agreement with the Centers for Disease Control and Prevention (CDC), can be accessed by calling COLA Customer Service toll-free at (800) 298-8044.

END-OF-YEAR RELEASE SLATED FOR COST STUDY

The Pennsylvania Health Care Cost Containment Council (PHC4) is preparing its first focused hospital- and physician-specific report on acute myocardial infarction (AMI) for release the end of 1995 or early 1996.

At the same time, the Health Care Financing Administration's Cooperative Cardiovascular Project is also under way to study treatment and timing intervention in AMI.

The Society's Task Force on Health Care Cost and Quality Data noted recently that physicians have expressed confusion about these two studies. The task force presented

Prostate Puzzle Video Available to Public

The Department of Health this spring sponsored a campaign to increase awareness of prostate cancer. The centerpiece of the campaign was a one-hour television show called, "The Prostate Puzzle," which was seen on public television channels across the state.

As a follow-up to the television show, the department has a shorter, 35-minute video available for use by any interested member of the public. The video, also called "The Prostate Puzzle," comes with a resource guide which is helpful when showing the videotape to groups in the community. This videotape is not intended for men only; it is to be used by men and women.

There is also a videotape targeted specifically to the African-American community—African-American men have the highest incidence of prostate cancer in the world.

The State Society has two copies of each videotape available for your use at no cost. If you are interested in viewing the tapes or using them in your community, call the Society at (800) 228-7823 or (717) 558-7750, extension 1437, to borrow a videotape.

clarification to the Society's board at its September meeting.

The Society plans to hold approximately six meetings for physicians across the state in early December to discuss the reports and assist physicians in understanding the methodology so they can better answer questions from the media and their patients. The meetings will be free of charge.

PENNSYLVANIA LAB SCREENS FOR METABOLIC DISORDERS

A simple, inexpensive test is now available from Neo Gen Screening in Pittsburgh that screens for over 20 potentially treatable, inherited metabolic disorders.

Newborns, as well as older infants and children, can be tested for such disorders as: Muscular Dystrophy, Galactosemia, Glucose-6-Phosphate Dehydrogenase Deficiency, Amino Acid Disorders, Congenital Adrenal Hyperplasia, Biotinidase Deficiency, Adenosine Deaminase Deficiency, Organic Acid Disorders, and Fatty Acid Oxidation Disorders. The cost of the test is \$17.50.

For more information, call Edwin W. Naylor, PhD, MPH, president and laboratory director of Neo Gen Screening, at (412) 341-8658.

NIH Report Addresses Infectious Disease Testing

A new report containing recommendations and conclusions about infectious disease testing for blood transfusions is now available from the National Institutes of Health Office of Medical Applications of Research. For a free copy, call (301) 496-1143.

Managed Care: Physicians Can Build It Better

by Roger F. Mecum, Executive Vice President

Managed care is the prime item of discussion at the Pennsylvania Medical Society these days. The commonwealth now is listed as one of the top five states in the growth of HMOs and other managed care delivery, and this marketplace trend toward managed care is having a tremendous impact on the members of the Society.

According to InterStudy, HMO growth between July 1993 and July 1994 was 47 percent in Pennsylvania. The state now has an average of nearly 20 percent in HMOs, and HMO data show the Philadelphia market is now approaching 30 percent.

The Ridge administration is committed to the movement of public assistance recipients (Medicaid) into managed care, and, as budgetary pressures continue to mount in Washington, initiatives are being developed to encourage Medicare recipients to accept managed care. In past years, HMOs and other managed care insurers avoided the Medicaid and Medicare markets; today, they are actively seeking the Medicaid market, and many are establishing Medicare risk contracts.

I occasionally hear physicians say they have serious reservations about the move to managed care. Some even openly oppose managed care. Still, it is obvious from the emerging trends in Pennsylvania and across the country that managed care will continue to grow in the health care insurance marketplace. Major buyers and businesses are dictating terms in the direction of managed care. Managed care is like gravity—it is here to stay.

The State Society and physicians need to view this trend as an opportunity. This is the time for physicians to

exhibit leadership and gain a strong position in the movement to integrated delivery systems. Physicians need to drop the negativism, focus on the positive, plan, and act accordingly. The State Society is here to assist.

Some physician efforts in the past have been disappointing, and other efforts failed—many because they concentrated on putting a structure in place with little planning as to how marketable it would be. Many efforts, including many PHOs, have not developed a defined product that the market is demanding. While past efforts have absorbed tremendous time, energy, and financial resources, the State Society is encouraging these groups to reorganize, letting form follow function. New efforts must be made to revitalize a physician organizational initiative that is truly marketable. This can be done. Again, the State Society can assist.

Moving quickly to be responsive to the needs of the membership, the Pennsylvania Medical Society has developed a variety of major initiatives aimed directly at managed care. Our reflexes have been quick and focused.

First and foremost, we created and funded the startup of a new subsidiary, the PennMed Member Services

"Around the state, the real work in dealing with managed care is being accomplished on the local and regional levels by physicians themselves."

For more information or advice on this and related issues, call the State Society at (800) 228-7823 or (717) 558-7750.

Company (PMSCO), to assist physicians in communities across the state in taking a leadership role in managed care. PMSCO is a physician advocate and consulting service to help establish physician organizations (POs). We are encouraged at the response from physicians; however, there is much more to be done.

In many areas of the state, physicians will need education on the need for POs, on the role of physicians in an integrated delivery system, on risk assumption and capitation, and on the basics of sound utilization management. The State Society and PMSCO are jointly responding to this need. The newest operational department of PMSCO is the provision of administrative services to physician organizations, such as contract negotiations, billing, utilization review, credentialing, etc.

Our message is strong and clear—the Pennsylvania Medical Society wants to unite physicians to lead in the movement to managed care and integrated health care delivery. Physicians are strongly advised not to give up their collective power and influence. Now is the time to exhibit leadership.

Because the Ridge administration is expected to speed up the regulatory process and has announced its intention to encourage more managed care entities to compete in Pennsylvania, the Society continues to meet with key staff from the state departments of health, welfare, and insurance to remind them of Society positions related to managed care. We are taking every opportunity to communicate and are making significant progress.

The Society has also embarked upon a series of meetings with key employers throughout the state and is discussing managed care with all of the major insurers in the state.

On the legislative and regulatory front, we introduced legislation that addresses managed care safeguards. This legislation now has over 70 cosponsors. We have also completed a series of educational sessions with key governmental staff from the depart-

ments of health and welfare, supplied regulators with a variety of educational materials, and encouraged the development of sound policy that would aid physicians in assuming leadership in managed care.

Finally, the Society's *Managed Care Resource Kit* and *Managed Care Handbook* are available from our Department of Physician Services to help physicians understand what is happening all around them and how best to deal with it. The Society will continue to author a variety of other key educational materials, as well as develop managed care seminars. In the future, these will be offered on a local basis so they can be customized to address local issues. Our new management teams are charged to expand the development and implementation of other managed care initiatives.

Market-based reform is well under way, and a large amount of capital investment is being committed to the cause of market survival. The big three topics are managed care, leverage, and integration. To gain leverage is to increase size and power. Leverage is driving the move to consolidations and mergers.

Physicians must also gain leverage in dealing with the new environment. Leverage for physicians is gained by managing patient care across the full spectrum of health care, through a multispecialty arrangement.

Around the state, the real work in dealing with managed care is being accomplished on the local and regional levels by physicians themselves. Many of these efforts are being assisted by the State Society. Please take a few moments to read some of the thoughts and advice shared by leaders of these initiatives in this special insert.

Physician leadership is critical. We must work toward partnerships between physicians, before we engage in other partnerships. There is no realistic alternative. Fragmentation is our enemy. ■

Managed Care Changing Scope of Society Subsidiaries

by Maria T. Montesano

The trends toward group practices, mergers, and managed care have had an obvious impact on the Society's subsidiaries. Let's take a look.

PMSCO

The Pennsylvania Medical Society early in 1994 created the PennMed Member Services Company (PMSCO) to help physicians take a leadership role in the changing health care system.

PMSCO currently is working with 19 physician organizations in various stages of development across the state. While its first year was mainly focused on consulting services, its administrative support and management services capabilities are now available to help physician organization.

PMSLIC

Managed care has impacted every area of PMSLIC—the Pennsylvania Medical Society Liability Insurance Company. That includes the marketing, underwriting, legal, claims, and risk management departments.

With the move to groups, non-physicians are often making the buying decisions, which changes PMSLIC's marketing approach. The company's products and services must also change to best fit the needs of the different types of groups.

Managed care contracts, and specifically hold harmless provisions and contract renewals, often leave physicians confused. That confusion has led to an influx in phone calls for PMSLIC's legal office, and PMSLIC's risk management department expanded its focus to include the potential liability physicians in groups and managed care programs could encounter.

PMSLIC has also created a subsidiary, Infinity Management Services, Inc., whose first major client, the

Pennsylvania Physician Healthcare Plan, has enabled the organization to move quickly into the managed care arena. Future plans for Infinity include the development of new products and services, positioning the organization to remain competitive in the changing health care and medical liability markets.

KePRO

The impact on the Keystone Peer Review Organization (KePRO), though not quite as widespread as that on PMSLIC, is still quite evident—and important.

Because in Pennsylvania KePRO HMO reviews involve only Medicare risk contracts, the transition has been gradual. In April 1993, that included only three or four HMOs; but as more HMOs develop, more expand into Medicare. KePRO expects to be working with nine or 10 HMOs by March 1996.

The same is true of KePRO South, which reports on the quality of Medicaid managed care in Florida. KePRO South recognizes an increasing volume of review and must work to deal with it.

The move to managed care has also left some Medicare patients confused. That means increased calls to the KePRO hotline and the need for informational materials to help Medicare recipients make choices about their health care.

KePRO's new cooperative projects may also lead to more formal alliances with HMOs, which may offer the PRO distinct benefits. For example, HMOs have a head start on preventive medicine, and there are definite advantages to using preventive medicine for the Medicare population. ■

Managed care is creating many new challenges to all the companies at 777 East Park Drive, Harrisburg—the Society, PMSCO, PMSLIC, and KePRO—but each company's strong physician leadership, coupled with the ability to remain flexible, are sure to get us through.

Miss Montesano is the assistant managing editor of PENNSYLVANIA MEDICINE.

Where Are All the Health Care Dollars Going?

by Michael P. Lance

The logical answer to the title question would be "to provide health care services to patients." However, in this evolving world of health care and maneuvering by various players to control or protect their patient bases, reimbursements, and profits, the answer is not the logical one.

The payers are very concerned with maintaining their existing market share, particularly those, such as the "Blues," with a high level of indemnity patients. We are not seeing an influx of new people moving into most regions in Pennsylvania. Therefore, these payers are trying to lock up or develop provider networks to insure that when their patients switch from indemnity health insurance to managed care products—which have proven to control health care inflation, or at a minimum slowed or stopped health insurance premium increases—they retain them and do not lose them to other managed care payers.

There is probably no way to put a dollar value on these efforts, which include buying practices, providing money for exclusive agreements, or paying for "first right of refusal" to buy practices that may be available for sale in the future. However, it is probably sage to say that, in this state alone, it approaches the hundred-million-dollar level.

An interesting situation which occurs in mature managed care concepts, and which some of the Pennsylvania payers haven't yet realized or accepted, is that once a payer controls more than 30 percent of any provider's revenue or business, it doesn't have to buy that practice because it owns the practice anyway. There is no way a practice could ignore or walk away from a payer and lose 30 percent of its revenue.

A very important message is conveyed by this reality: You must diversify your book of business so that no one payer can have that much leverage or control over the survival or viability of a practice. This is a prominent goal of the physician organizations being developed by the PennMed Member Services Company (PMSCO) with our clients. We strongly encourage multiple managed care payers in the community to increase competition among the payers and diversify the book of business for our clients.

In addition, since most of the managed care payers are publicly traded in the stock market, and because they have investors to respond to and large salaries to pay for some top executives—one HMO CEO's annual salary requires 20,000 enrolled patients—excessive profits have been generated from the health insurance premium.

But not only are some payers generating excessive profits, they are also generating extensive "reserves" which are designed to ensure they can meet all present and future expenditures for health care. These reserves have been created by physicians beginning to manage health care costs, particularly in the hospital component, and the monies saved have been retained by the payers without appropriate sharing of these funds with the physicians who generated the savings. We are just now seeing the payers beginning to respond to pressures to develop shared risk programs that do share with physicians some of the savings generated.

The payers are not the only ones using significant health care dollars for other than health care services. Hospitals throughout the state have already spent a considerable amount developing physician hospital organi-

Mr. Lance is chief executive officer of the PennMed Member Services Company of the Pennsylvania Medical Society.

zations and hospital networks to protect their market share and present reimbursement levels. They are very aware that hospital costs are appropriately targeted for significant reductions as we transition into a more mature managed care environment. The legal costs, asset purchases, and debt assumption involved in these efforts are in the millions of dollars.

However, these dollars are being dwarfed by the health care dollars being spent to purchase physician

practices (predominantly primary care), an amount bordering on absurdity. We are aware of a hospital that has purchased a large number of practices and is losing over \$500,000 a month or \$6 million a year. It can absorb these losses easily and write them off to the cost of protecting its market share and reimbursement levels.

If the employers, government programs, and patients become aware of the magnitude of their health care dollars not being spent on providing

health care, this irresponsible spending will, we hope, be addressed. We can only hope that these groups will recognize that health care costs are increasing due to factors totally unrelated to the cost of health care services provided or ordered by physicians. This enhanced awareness will help ensure that appropriate efforts and dollars are spent treating the "disease" of high health care costs, and not just the perceived "symptoms" caused by legitimate health care services and costs. ■

High on the Hill, There's Talk of Managed Care

Of the 194 bills the State Society continues to monitor "on the Hill" in Harrisburg, 26 deal with managed care issues. Here is a complete list of those 26 bills, along with the prime sponsor, a brief description, and the Society's position for each. Direct any questions about this or other legislation to the Society's Department of Legislative Affairs at (800) 228-7823 or (717) 558-7750.

Senate Bill 35 (Holl)

Addresses selective contracts—Blues. *Support.*

Senate Bill 568 (O'Pake)

Proposes utilization review reforms. Drafted with Society language. *Support.*

Senate Bill 762 (Salvatore)

Directs Pennsylvania Department of Public Welfare to implement a managed care system for Medical Assistance. *Support concept.*

Senate Bill 828 (Greenleaf)

Seeks regulation of health care utilization review. *Support—introduced at Society request.*

Senate Bill 1126 (Heckler)

Seeks to require HMOs to provide drug and alcohol services. *Seeking amendments.*

Senate Bill 1191 (Baker)

Would permit municipal authorities to finance cooperative hospital or health center ventures, acquire facilities, or form and develop networks. *Under study.*

House Bill 571 (Olasz)

Seeks nondiscrimination by payers in health care benefit plans (any willing provider). Includes Society language. *Support.*

House Bill 630 (King)

Proposes rural patient freedom of choice (any willing provider). *Testified at public hearing in July.*

House Bill 816 (Colafella)

Addresses HMO grievance system. Based on AMA model language. *Support.*

House Bill 1353 (Michlovic)

Addresses local Medicaid managed health care. *Under study.*

House Bill 1415 (Lawless)

Would require insurers to pay for ER services in certain circumstances. *Support concept—introduced at PACEP request.*

House Bill 1682 (Richardson)

Would create a Medical Assistance Managed Health Care Act. *Oppose.*

House Bill 1747 (Curry)

Mothers and Infants Health Security Act—would ensure 48-hour post-delivery benefits. *Support.*

House Bill 1839 (Allen)

Medicaid Prescription Drug Benefit Act—would maintain rebates to manufacturers under managed care. *Support.*

House Bill 1846 (Kukovich)

Sets Medical Assistance managed care planning requirements. *Seeking amendments.*

House Bill 1847 (Kukovich)

Proposes utilization review reforms. *Seeking amendments.*

House Bill 1848 (Kukovich)

Addresses HMO primary care definitions and nondiscrimination. *Seeking amendments.*

House Bill 1849 (Kukovich)

Addresses HMO primary care definitions and effectiveness reports. *Seeking amendments.*

House Bill 1850 (Kukovich)

Addresses HMO primary care definitions, and consumer and provider information. *Seeking amendments.*

House Bill 1851 (Kukovich)

Would provide choice of primary care practitioners and revise "risk" portions of contracts. *Seeking amendments.*

House Bill 1852 (Kukovich)

Proposes HMO reforms. *Referred to PMSCO for comment.*

House Bill 1856 (Veon)

Would require the Pennsylvania Health Care Cost Containment Council to report on HMO quality. *Support.*

House Bill 1857 (Veon)

Proposes HMO provider and patient grievance processes. *Support.*

House Bill 1858 (Veon)

Proposes HMO annual survey of patient satisfaction. *No position.*

House Bill 1859 (Veon)

Would require HMOs to tell providers when practice standards and parameters deviate from the norm of the profession. *Support.*

House Bill 1880 (DeLuca)

Would restrict HMO direct provider incentive plans. *Referred to PMSCO for comment.*

Compiled by Larry L. Light, the Society's director of legislative affairs, and Elizabeth B. Metz, the Society's group director of research and policy development.

Physicians Rise to Challenge of Extraordinary Times

Physicians leading organizing efforts in the commonwealth are ordinary doctors who are rising to the challenge of extraordinary times. PENNSYLVANIA MEDICINE asked several to explain why they have taken the lead and what challenges they have faced. Following are their answers.

"Physicians are the last true patient advocates and need to direct the process for the best interests of our patients. However, without large numbers of members in our organizations, we diminish our negotiating advantage. With a larger group, we obviously can get and maintain the leverage needed."

—**George A. Primiano, MD**
Pocono Regional Physicians Association

"Physician involvement and leadership is so important because, if physicians don't get involved, earnings and the quality of patient care will be determined by the payers. A physician organization is the only way for physicians to truly maintain control over the quality of care and the earnings gained from that care."

In my efforts, I've found the education of my fellow physicians to be the biggest challenge."

—**Daniel S. Gordeuk, MD**
Central Physicians Association (Centre County)

"The practice of medicine is becoming even more complicated by issues of managing health care resources, as well as taking care of ill patients. Physician organizations can help relieve some of the pressures from an individual physician and help direct emphasis on managing patient care, with assistance from an organization on managing resources."

Unfortunately, most of the recent talk on the change of the health care system has revolved around financial issues, which many physicians have been uncomfortable discussing. Having physicians sit down at a table with a unified voice, when they have different interests, has been a challenge. On an encouraging note, the long-term vision of physician organizations being successful has facilitated a coming together of specialists and primary care physicians."

—**Raymond Rodriguez, MD**
Hill Independent Practitioners Association

"Absent the leadership of physicians in health care integration, the doctor/patient relationship will become the insurer/patient relationship. Only through the power of physicians working together can change be forthcoming on behalf of medicine. Solo practices or small groups don't have that kind of power alone."

It has been a challenge to convince doctors that they do have the power and the skills to remain the dominant voice in health care."

—**Joseph J. Danyo, MD**
York County Physicians Organization

"Physicians have the advantage of the most objective stance in these circumstances. They understand the needs of their patients and the mechanisms of the health care delivery system. But individual physicians alone cannot command the attention of the powers that be."

One challenge I've faced is assuring equitable treatment of primary care physicians and specialists. Capitated systems have the potential of placing primary care physicians and specialists at odds. We have to work to eliminate this strife between physicians."

—**Paul Schenck, MD**
Lehigh County Medical Society

"Our competition has demonstrated over and over their lack of awareness and understanding of what is best for patients. I think physicians can be both more intelligent and more productive. It is time for us to stop muttering in the back of the bus and move up to the driver's seat."

There is strength in numbers. The other players are frequently gigantic and almost impervious to a single voice. Notice at your next staff meeting how often administrators hear a single voice. And when did insurance giants ever listen?

Two challenges I faced in helping with the development of our physician organization were integrating the appropriate units and keeping the ball rolling."

—**Edward Lottick, MD**
Northeast Physician Organization

"Physicians are the best patient advocates to ensure patient access to physicians of their choice and to ensure the quality of the care delivered. When physicians work together or form an organization like ours, it gives us more strength and control to assure appropriate medical decision making."

In Tioga, we have had to deal with complacency within the medical staff at our hospital. We're also a very small group of physicians."

—**Ronald W. Callenberger, MD**
Tioga County Physician Organization

"It's clear to me that physicians are the only players who are ultimately responsible for patient care. Physicians, with their clinical insights, must be responsible for system reorganization. Otherwise it will be done by those whose emphasis is more financial than clinical."

Working together increases our negotiating leverage with payers. By working together we can bargain more effectively thereby preserving clinical excellence, maintain some physician autonomy, and also [ensure] that physicians receive an appropriate percentage of the health care dollar."

If you're just getting started, don't expect consensus. Work hard, and surround yourself with interested, energetic colleagues."

—**Robert P. Johnson, MD**
Lancaster County Physician Organization

"Physicians—not government or insurance carriers—have the responsibility to work directly with their patients to determine the necessity and appropriateness of various health care interventions. We must reassume leadership in this role, which has now become very political, and not remain in a 'reactive' position."

New health care 'systems' will work efficiently only if physicians assume a central role in their design and operation. Formal physician organizations can provide the necessary framework for physician cooperation and action."

The changes taking place now are very challenging in many ways. Simultaneously, I am a 'consumer' of specialized health care services, president of our medical staff, a family physician in a

group practice, and a member of a small community. Each of these roles gives me a different perspective; the biggest challenge is to move forward in a direction which tries to keep these perspectives in balance."

—James W. Sillaman III, DO
Latrobe Physician Organization

"Physicians have the broadest overview of the health care system, and we have the most personal contact with the 'consumer'—namely patients. It falls principally to the physicians to increase efficiencies and decrease utilization without sacrificing quality.

Without joining together we will have no input into the future of health care. It will be controlled by hospitals, insurers, and employers.

Our practice has some philosophical and religious distinctions which are very important to us. It is challenging to maintain these while working for integration."

—Charles "Chip" Mershon, MD
Cornerstone Family Health Associates, PC

"Physicians, more than anyone else, should be responsible for the health care of a community. They must act as advocates of their patients to be sure that the principles of quality medicine are not undermined in the 'business of health care.' If physicians want to have any say in the medicine of the future, they must take charge now. Physicians must join together to get the leverage they need to be taken seriously. With antitrust laws the way they are now, formal organizations are necessary to exercise any kind of market power.

Getting doctors together is like 'herding cats.' Most physicians are independent by nature. If they had wanted to work in organizations, they probably would have chosen another career."

—Stephen D. Pett, MD
Medical/Dental Staff President, St. Vincent Health Center, Erie

"Integrated health care delivery systems will develop whether physicians are involved or not. Physicians need to be proactive and involve themselves in the development of new health care delivery systems to assure their future security.

Physicians have become very insecure because of an uncertain future. We need to join together to recapture and secure that future—a future we had taken for granted. We must join together to retain the good aspects of traditional care while these new systems of care develop. We must join together to be certain our patients continue to receive the best medical care that can be given.

In Armstrong County, we brought together physicians who were staunch independent solo practitioners of all specialties. We now are faced with new challenges as an independent physician association. These are very exciting times."

—Fred Doerfler, MD
Armstrong Physician Association, Inc.

"Physicians have, in good faith, left the leadership roles in health care to hospitals, HMOs, etc., only to be used as pawns for others' advancement. If physicians are to direct the health care of the twenty-first century, then they must become active participants now!

'United we stand, divided we fall.' For decades others have told physicians that they are lousy business people, and we need others to run both medicine and our business. But we're not lousy business people, we just need to refocus and redirect our energies in areas that we've long ignored. If we don't take action for ourselves, then we will have to take what is left.

In my organizing efforts I've seen distrust, disbelief, feelings of helplessness, fear, irrational feelings of ignorance, and indecisiveness. Trying to convince the world that physicians are leaders and decision makers has been difficult.

I advise colleagues to work hard to create a sense of predictability for the other physicians participating in an organization. Predicting the environment and the future are difficult at best. If you understand the risks, possess a belief in self and purpose, have tenacity, pay attention to detail, and understand what motivates others to take action, then you will succeed."

—Donald Lieberman, MD, MBA
Northeast Physician Organization

"Physicians need to be the ones making clinical decisions—not the payers. If they do this, physician providers will align their incentives with those of the payer and employer and, therefore, produce a product of value (cost-effective medical care). Physicians are the ones who practice medicine, and they will only have influence over clinical decision making in an organized entity. If they are not organized as such, payers and hospitals will be in control of clinical decision making. In an organized entity, physicians can come together and find the greatest way to deliver good quality care at the most cost-effective price."

—James F. Rich, MD
Central Pennsylvania Physicians Organization

"In the past 30 years, we have not handled well the balance between quality and cost. This has led to the current crisis. It would be shortsighted, however, to allow physicians to be excluded from significant participation in the change that must now occur.

Currently, physicians are very disorganized and scared. They are feeling impotent and not making good business decisions. We must join together, not to slow down the necessary changes, but to provide a forum for education and a strong voice. We must ensure we are 'at the table' with policymakers, insurers, and other payers of health care, to protect the quality of health care delivery. We must show them we can do this in a cost-effective manner. We will then gain back the respect that physicians have lost as a profession.

The greatest challenge had been fear in the physician community. Doctors are 'selling out' their practices to try to buy a little security. They are distrustful of each other. Specialties are arguing over 'turf.' We need to come together more than ever. It has been very difficult getting others to see that."

—Kevin J. Kelly, MD
Colonial Park Family Practice (Dauphin County)
President, Greater Susquehanna Physician Alliance

"Health care integration means consolidation. The issue is whether there will be three players or only two when the consolidation has been completed over the next four or five years.

At the moment, many physicians are running around like ants whose hill has been stepped on. But some leaders are stepping forth, wise to the ways of business, the market, and the law. They are sounding the call that if physicians are going to play any role at all in this consolidating health care market, they are going to have to organize themselves into large, well-financed, well-managed organizations with their own information systems; their own utilization review, quality assurance, and credentialing processes; and their own marketing potential. These organizations will be the agencies for signing managed care contracts with insurers and even with self-insured employers who seek to provide their covered enrollees with a provider network that has broad geographic access and the capacity to provide comprehensive health care.

If these physician-owned companies fail to materialize, there will be only two parties to the contract—the insurer and the hospital system."

—Thomas G. Gabuzda, MD
MainLine Health System

10 Reasons Why Physician Organizations Will Succeed

by William J. Lewis, MD, JD, MS

Physician-led managed care organizations will succeed in the evolving managed care marketplace for many reasons. For those same reasons, they will succeed in efforts to "reform" the health care financing system, the leading source of escalating costs for health care.

High costs of facilities, pharmaceuticals, and technology, as well as demographic and social factors—a rapidly growing older population, AIDS, the specters of substance abuse and violence, tobacco and alcohol use—all contribute to the cost and to the strain on our health care system.

During this period of change, many seek to control the health care system to further their own agendas. Wall Street would like to control medical care in order to direct profits toward shareholders and corporate executives. Hospitals would like to control care to assure their survival as care moves toward outpatient facilities.

Physicians and physician organizations must remain the advocates and protectors of patients. In a system strained by financial and social pressures, physicians can ensure that desperately needed finances and resources necessary to care for patients are not misdirected—in the name of reform—out of the system.

The 10 reasons physician organizations will ultimately succeed are:

1. Cost Effectiveness

There is no question that health care is expensive and that health care resources are limited. Health care must be re-engineered to make it cost effective, not manipulated to reduce needed services, resulting in more serious disease and much more cost. The biggest problem with health care is financing, not care.

Most patients are comfortable with their physician, but uncomfortable with the administrative barriers and paperwork that hinder their physician's efforts to properly care for them.

Do "MBAs" really understand health care well enough to make safe and wise decisions about patient care? Physicians are not the cause of the financing problem. Physician organizations with the proper infrastructure to control costs, maintain quality, and monitor outcomes are the solution. Extensive business bureaucracy that reviews spreadsheets and does not see or understand patient illness ultimately will be more expensive. Physician organizations are the key to cost effectiveness.

2. Quality

In efforts to control costs, we must be vigilant to preserve quality. Some have argued that since we cannot adequately define quality, we must focus on cost.

Quality care is cost-effective care. Poor quality means re-admission and costs beyond any short-term savings. Physicians and physician organizations have a better understanding of quality than business managers. W. Edward Deming, whose theories of quality control revitalized Japanese industry after World War II, understood that quality is not made by people, but by processes. He knew that people on the "assembly line," those who deal with problems on a daily basis, know and understand the processes and can identify and correct areas where improvement can be made. Physicians and physician organizations are the solution to re-engineering processes of care.

Dr. Lewis is chief of otolaryngology, Lankenau Hospital and Medical Research Center, Wynnewood. He is also an attorney and a member of both the Pennsylvania and New Jersey Bar, concentrating in health law, and has a master's degree in business (administrative medicine).

3. Knowledge

It is generally acknowledged by economists that the health care marketplace is really a different marketplace than the type economists use in models. The health care market lacks many of the assumptions that are made in typical market dynamics, both on the consumption side (i.e., indirect utility, uncertainty, and uninformed consumers), and on the production side (i.e., lack of homogeneous goods, lack of consumer information, and barriers to entry).

Health care is extraordinarily complex, and a thorough knowledge is necessary to make informed decisions regarding patient care. Economists and MBAs do not possess the medical knowledge physicians receive: After a college degree, they acquire an additional seven to 10 years of training, including medical school, residencies, and fellowships. There is no shortcut to knowledge in medicine. Indeed, it is a lifelong learning experience. Medical decisions should be made by those trained in medicine and not those trained in business.

Historically, some of the brightest students in college entered medical school and have strived to protect the most valuable asset of our nation—the health of its citizens. Travelers from all over the world come to our health system for its quality.

Physician organizations must take control of the health care system. Knowledge of medicine and medical processes are critical in any attempts to reform health care financing.

4. Compassion

The Hippocratic Oath reads: "I will follow that system of regimen which, according to my ability and judgment, I consider for the benefit of my patients." Compassion in the doctor-patient relationship is essential. Will Wall Street's control of health care and for-profit corporations kill compassion? Will corporatization be "in" and compassion be "out"?

If health care is a scarce resource, shouldn't those limited dollars be

used to provide effective care and to lower costs of insurance to employers? *The Wall Street Journal* on December 21, 1994, carried the headline: "HMOs Pile Up Billions in Cash, Try to Decide What to Do With It." Ask the "subscriber" who, as a patient, is forced to leave a hospital early or whose care is delayed or denied. Physicians are the solution. Compassion must survive the "corporatization" of managed care.

5. Access to Care

Changes are needed. Costs must be contained. Coverage must be expanded. People need to be cared for. Some insurers, looking to protect their bottom line, "market" to healthy populations, ignoring those who need care the most, leaving them without coverage. From a physician standpoint, those who need care should receive it regardless of the ability to pay. Although physicians see patients "pro bono," it is becoming increasingly difficult to receive facility backup if funds are unavailable.

It is understandable that hospitals that provide "free care" to all cannot meet their payroll and ultimately will be unavailable for other patients.

Physicians have always been accessible for those that need care. Physician organizations and volunteerism can help provide an access point to those not covered.

6. Choice

Patient choice of physicians is fundamental to care. Patients must trust and feel comfortable with their physicians. Anxiety and insecurity regarding one's physician impedes medical recovery. Limited physician panels and physician employees are assigned "lives" in the corporate model of managed care. The patient has little choice of which physicians he or she sees, or, if given any choice, he or she often faces a financial penalty. Physician organizations allow patients the necessary choice of caregivers. →

"Knowledge of medicine and medical processes are critical in any attempts to reform health care financing."

"The physician organization located within a community can best determine local needs and be responsive to them."

7. Dedication

Health care is a 24-hour "business," seven days a week. People can become ill anytime and need responsive care. There is nothing more frustrating to a physician and his or her sick patient than attempting to call an insurer on a Friday evening or in the middle of the night to "certify" care, only to have the call go unanswered, transferred to voice mail, or delayed while a "determination" is being made."

Those involved in health care decisions must have the knowledge and the dedication to be available all the time. Doctors have always responded to calls for care at all times of the day and night. If non-physicians wish to make care decisions, it is appropriate that they also carry "beepers" 24 hours a day, and be available and able to make quick decisions.

8. Ability to Reduce Cost to Employers

Most businesses, including many small businesses struggling to survive, see expenditures for health care increasing. Some insurers, extracting upwards of 30 percent of the insurance dollar, pay millions to executives and shareholders that "drain" the system.

Physician organizations in the midwest (Minneapolis) have directly contracted with businesses, cutting out the middleman and dramatically lowering costs of health care to businesses. The billions in health care dollars that leave the system could provide businesses the break they need to lower costs and remain competitive in the business world. Physician organizations may be the key; business organizations may be the starting point.

9. Responsiveness to Local Community Needs

Health care needs vary by community, and local physicians and physician organizations caring for patients can best determine those needs. We must remember that health care cost increases over the past 20 years are due to factors other than "disease."

The population is getting older with resultant increases in chronic medical problems. People older than 65 require twice the health care expenditures of those under age 65. Epidemiological factors such as AIDS, substance abuse, and violence all influence the "cost" of health care and need to be addressed. Technology has improved care, but is also expensive.

The physician organization located within a community can best determine local needs and be responsive to them.

10. Patient Advocacy

Insurers look upon patients as subscribers, and their corporate business goal is to make a profit. Patients are becoming increasingly aware of the large amounts of money diverted from their care to pay corporate executive salaries, bonuses, and stock options. Everyone is aware of the marketing budgets for TV advertisements and huge billboards that are used to lure new subscribers. This "profit" could be used to safeguard quality for patients and lower premiums to employers.

The government sees patients as voters. We all know, and unfortunately many of us accept the reality that politics, lobbying, and deal making often stand in the way of doing what is needed and what is right. We have the best health care in the world; people travel from all corners of the globe to access it. The problem is not care—it is financing and access.

Ultimately, patients will exercise their rights and assert their roles as subscribers and voters to pressure insurers and government. But in the interim, will the health care of our nation fall victim to corporate America and the political system? Will those insurers and politicians truly committed to care stand up and protect patients?

We must remember the people who need care are patients—and not subscribers on a spreadsheet or names on voter registration lists. Physicians must take charge of the health care system and continue to be the advocate of patients. ■

10 Good Reasons to Stay Independent

For Private-Practice Physicians Thinking About Selling Their Practices

by Sharon R. Orlowski

Advocating for patients is the fundamental obligation of physicians. When physicians become employees of hospitals and insurance companies, limitations may be placed on their ability to make truly independent decisions that are in the best interests of patients.

Most physicians would agree with the above statement to some degree, but money is often the primary reason physicians sell practices. Though the dollars being offered would get anybody's attention, most physicians selling primary care practices today are selling out cheap.

First, it is impossible to set a good value for a primary care practice today. A practice value is often based on previous financial performance and a projection of what the practice revenue will be in the future. The rate of increase in gross revenues is very likely to exceed the top rate permitted by Generally Accepted Accounting Principles, which accounting professionals must use as a guide.

Second, there are examples of primary care physicians throughout the country in mature managed care markets who have annual gross incomes of over half-a-million dollars. If nothing else, this is an argument to delay selling your practice for a few years.

Putting money aside, here are 10 good reasons why you should not sell your practice:

1. What happens when all the doctors turn into pharmacists?

In days past, pharmacists were the people who owned the drug store and really knew their customers and offered advice based on this personal knowledge. Now, pharmacists generally work for large drug store chains

that sell everything from groceries to toys. The drug store chains routinely run TV advertisements trying to convince people that their employees really do care. Most people no longer see such pharmacists as their "advocates."

If the medical profession follows the same course, the impact this has on innovative thinking and patient advocacy will be staggering. What is best for patients becomes intermingled with what is best for physician employers.

2. Those who buy always have the option to resell. Employers control the purse strings and can "change their minds" about a deal after it is struck.

Horror stories abound that relate to unkept promises for equity, bonuses, and other "incentives." The axiom applies: "Business is business." The market conditions that make these good-faith promises acceptable to both you and a potential employer today are very likely to change.

For hospitals, revenue will be in shorter supply, perhaps shorter than many hospital administrators are willing to admit to themselves. For independent primary care physicians, it is distinctly possible that incomes will far exceed salary increases set today. Trying to negotiate a salary increase with an entity that is facing severe budgetary problems is not a good bet.

3. You will voluntarily be sucked into the bureaucracy.

Prior to selling their practices, prospective employee physicians are recruited, courted, cajoled, enticed, soothed, respected, and the recipients

→

is not gone."

of direct attention from the highest levels of management.

The "common emotions of physicians easing into employment," as presented by one hospital administrator, are: tremendous loss, depression, diminished self-worth, loss of control, loss of identity, missing rewards of running their own practice, and dismay that it takes longer to get things done. Doesn't sound very appealing.

A bureaucracy is no place for practicing physicians to be stuck. Working in a system that takes 30 days to respond to a supply requisition for aspirin is, at best, frustrating for a formerly independent physician.

4. The phrase "any willing provider" takes on a new meaning.

The essence of the any willing provider issue is ensuring patients' access to the physicians of their choice. A new meaning for this phrase is when employed physicians become a "willing provider" for any insurance plans deemed acceptable by their employers. Employed physicians unhappy with the policies and procedures of payers must get permission from their employers to withdraw.

Conversely, if physician employers do not participate in selected insurance plans because the plans do not meet their financial requirements, patient access to employed physicians will be blocked. Your patients' ability to choose you as their physician will be greatly impacted by your employer's bottom line.

5. Relinquishing responsibility for your practice also means relinquishing control of your future. Why else would anyone want to give you that much money?

Most employment contracts include a restrictive covenant or some language that will preclude a physician from continuing to practice in the same community if the employment agreement is terminated. In other words, even if it is the employer that termi-

nates the contract, the employee may have to leave.

The health care market will continue to change rapidly. No one's crystal ball can be accurate. In only one or two years, such change could occur that business decisions made today will need to be modified and modified again to meet the evolving market demands. However, a business decision to sell a practice is likely to stand out as a decision that will supersede all others, regardless of whether it becomes evident that employment was not a good idea, regardless of whether the employer remains financially viable, and regardless of whether the employer sells itself or is purchased by a larger organization.

6. Fear and uncertainty are actually two good reasons not to sell.

In times of uncertainty, it is tempting to think that "somebody" has all the answers. Many physicians fear being left out, deselected, or bankrupt because of changes in today's health care market. They eliminate their uncertainty about the future by selling their practices to the "somebody" who has the answers. They receive a salary that reduces their worry about potential future financial difficulties.

All too soon after exchanging this worry for a salary, it becomes clear that the worry is not gone. Physicians come to understand that nobody's crystal ball is any more clear than their own. This realization is compounded by a growing understanding that salaried physicians are selling themselves far too short. Primary care physicians' incomes, in a capitated system, are likely to increase substantially—much more than most negotiated salary increases. Selling a practice to avoid future financial difficulty essentially blocks a physician's access to a future financial reward.

7. Selling to get capital may ease cash-flow concerns, but will definitely create more problems.

Cash flow is a problem for many physicians who wish to progress in

managed care by expanding their practice, merging, and/or using sophisticated computer equipment. So they sell the practice or share its governance with an entity that supplies needed cash. Sometimes these entities promise additional coverage or an instant partner.

There is no such thing as money for nothing. This is an immutable law of the business world. Those who provide this cash seek control in return.

If you are not paying for the coverage or the new physician partner, what control do you have over someone who is now essentially a coworker? What happens if the arrangement is unsatisfactory? The "cash partner" must agree to remove the coworker. Naturally, the coworker will have a separate contract and all the trimmings that would complicate matters. This control is similar to the employer/employee relationship.

8. "Giving someone else the headaches" is not truly possible—physicians will always be held ultimately accountable for what happens to their patients.

As the patient advocate, physicians bear responsibility for the welfare of their patients. It does not matter whether the course of action is one they have selected or is a directive from an employer.

Most administrative burdens are also not something that can be delegated. The ultimate responsibility for coding remains with the physician, regardless of employment status. The responsibilities associated with documentation and recordkeeping remain with physicians regardless of employment status. It is still the domain of the physician to understand, conform to, and argue with utilization review procedures set by payers.

9. Vertical integration and physician employment are not synonymous—no matter what, physicians will have to drive the system for it to be successful.

An integrated delivery system is a conglomerate consisting of a payer, a hospital, and a physician network. Each is an equal partner. This is far too often confused with a staff-model HMO. When physicians are employed by a hospital or a payer, they are no longer an equal partner. Representation in governance is highly suspect and, again, does not blot out the reality that one entity is the employer and the physician is the employee.

As an equal partner in a vertically integrated system, physicians still must have a preeminent role and be positioned to make decisions that protect patients and use resources efficiently—regardless of how it affects the bottom line. Employing physicians and offering representation in governance does not permit this since the employer will always have the final word.

10. Independent physicians addressing market forces in a cooperative fashion is the antidote to the "practice-for-sale" syndrome.

California, which is many years into a mature managed care market, still has thousands of physicians in solo practice or in small groups. This directly contradicts those who theorize that large conglomerates of employed physicians will be the norm in years to come.

Employers are voicing their concerns about physician employment and the negative impact it has on cost and innovation. Many hospitals and HMOs strongly oppose physician employment on the grounds that it stifles competition and patient choice.

Physicians speaking with a unified voice in group practices or in physician organizations of various types remains the most viable way to face the future. ■

Lessons from Pennsylvania's Managed Care History

by Alan Somers, MPH, MBA, JD

The following observations are offered to remind physicians newer to Pennsylvania's managed care marketplace of what has been tried before, what works, and what does not.

Lesson #1: One way to protect profitability is to consolidate bargaining power by forming groups.

The price which business asked for in return for its recent cooperation with medicine to kill federally driven health system reform was that market-driven reform continue, i.e., that physicians compete. In managed care, as in hundreds of industries, there exist five sources of competition. Among competitors, who has what bargaining power largely affects who reaps what profits, or even who will succeed or fail. A physician can measure his or her bargaining power only relative to others, in competition among:

1) *those who already offer managed care* (e.g., HealthAmerica of Pennsylvania);

2) *new entrants into the market* to offer managed care (entities such as Pennsylvania Physician Healthcare Plan);

3) *those who offer a substitute* for managed care (e.g., Independence Blue Cross's "Personal Choice");

4) *buyers of coverage* from a managed care organization (e.g., Boeing, PPG, AMP, Bethlehem Steel, Inter-Metro Industries, or Merck); and

5) *suppliers ("providers")* of care to an MCO (a suburban cardiologist).

Why does this matter to Pennsylvania physicians? These sources of competition pose no surprise. The surprise is how regularly even sophisticated competitors underestimate the extent to which their profits will be seriously affected by competition from all five sources at once.

HMOs compete with HMOs and surely track each other's moves toward market entry by those not yet licensed; but substitutes impact the market too. Measure the power of PPOs—coupled with indemnity insurance—as substitutes for HMOs by how quickly one HMO has followed another in creating "point-of-service" options in market after local Pennsylvania market.

We can illustrate buyer power by comparing the stories of HMO of Pennsylvania and HealthPlus of Michigan. The latter was founded by the leadership of a county medical society. Otherwise, both HMOs started in the mid-1970s as federal grantees, not for profit. Both based their care delivery on the services of community-based physicians and secured federal qualification. Both were managed well from the start. Yet, buyer power is fragmented around Philadelphia. That allowed HMO of Pennsylvania to convert for profit as U.S. Healthcare around 1981, without effective buyer opposition. The HMO's profits for 14 years have gone into growth for its shareholders,

In contrast, around General Motors' hometown, buyer power is concentrated in GM and the United Auto Workers. Though HealthPlus had been the first IPA-HMO in the country which the UAW had approved, it legally blocked conversion of Healthplus for profit in 1984. This HMO's "profits," through the 16 years since its licensure, have gone to those who buy from it.

To see supplier power, consider primary care. It provides the heart of managed care. As Pennsylvania's health care coverage buyers have shifted more toward managed care, the relative bargaining power of primary care physicians has risen. Witness bidding by Pennsylvania HMOs and hospitals over

Mr. Somers heads the law firm Somers & Associates, PC, in Exton. He led planning for marketing, health care delivery, and finance for a quarter-million-member IPA-HMO in upstate New York, and has served as regional manager for another, which he helped create, in Michigan. He has taught marketing in one of the nation's first physician MBA programs and has advised IPAs, PHOs, PPOs, and HMOs.

the past two years to buy primary care practices. Primary care doctors can use their new-found leverage to bargain for a majority among doctor votes on the boards of PHOs, POs, IPAs, and doctor-sponsored HMOs, as they have done in other states.

Yet, whether in primary care, secondary care, or multi-specialty practice, with or without walls, a legally organized group has more bargaining leverage than the same number of solo physicians. On one hand, the profits of individual practitioners in local markets oversupplied with doctors—e.g., most suburbs—can be bargained away by the concentrated buying power of market-dominant HMOs. On the other hand, concentrated supplier power—e.g., that of suburban Philadelphia's Omni medical group—can out-compete solo practitioners and small groups to secure contracts with HMOs for large numbers of covered patients, at the best capitation rates the market will bear.

Lesson #2: The best product or service idea can fail by coming to market too late or too soon, if nobody rigorously researches the wants of targeted buyers first.

Pennsylvania physicians disliked the federal HMO program, but it did require would-be HMOs to put their marketing horses in front of their organizational developmental carts. They did rigorous market research first, in contrast to many of Pennsylvania's past and present care-provider-sponsored ventures. Even if HMO of Pennsylvania had found a feasible market earlier in the suburbs of Philadelphia, in the late 1970s, local studies still found the HMO idea ahead of its time in places like Harrisburg and York, so no further dollars were wasted.

Contrast that with the statewide, PPO-development effort undertaken jointly by hospitals in Philadelphia, Harrisburg, and York in 1981 and '82. Before CareCard planning was ended, the sponsors lost on it 22 times the money spent on a typical federal HMO feasibility study.

Still, those who originated CareCard should be commended for their vision. They may have entered the market successfully—later, but successfully—if, instead of relying on intuition and informal contracts with a small number of those in Pennsylvania board rooms, they had rigorously researched the receptivity of an appropriately sizable sample of benefits decision makers.

Lesson #3: Especially because a new PHO—let alone a new IPA-HMO—will lack the element of surprise, it needs rigorous market research and analysis up front to pick the best “beach” for its “amphibious assault.”

Twenty-two years after the federal HMO Act, few Pennsylvania population centers, if any, lack HMO or PPO competitors in place. Many of these competitors are powerfully able to defend against new entry into the segments of the market they value most. For a new entrant to gain a “beach-head,” it needs proper market research and analysis to land on the least defended “beach” worth having.

Those planning to enter into the competition should start by researching who, besides fellow doctors, is in the market to buy what, at what price, and where. Examine local competitors, from among the five sources of competition mentioned, to learn what attractive market segments are underserved or poorly defended—the “beaches” presenting best prospects for short-run success. In the backyards of Keystone Health Plan East and U.S. Healthcare, Oaktree Health Plan strategically targeted Medicaid.

Next, design core business processes to out-compete others in serving the market segment(s) targeted. Only last, create the organizational structure best for governing the processes you have designed and best for raising the capital those processes require. You have heard it before: Form follows function. But also remember: Function flows from the best market opportunity.

Lesson #4: A competitor in managed care must develop specific core competencies to improve its odds for winning.

→

When a PHO, PO, or HMO enters a market late to battle competitors already well entrenched, rigorous market research and analysis are necessary but not sufficient. Relative bargaining strength among competitors largely determines the long-run winners in any industry, including managed care. Yet, MCOs often, if not always, can improve their relative bargaining leverage by strengthening the competencies at the strategic core of managed care.

A respected HMO securities analyst and other knowledgeable observers agree that the following list of competencies, derived from analyses of dozens of for-profit managed care plans, will be required for success over the next

five years. In Pennsylvania today, they best can be illustrated by U.S. Healthcare:

- *Industrial, governmental, and consumer marketing abilities*, deep enough to contend for dominance in local competitions to cover large employed groups, but also wide enough to exploit profit opportunities from lower competition to cover Medicaid, Medicare, small groups, and workers' compensation.

- *Health care management ability*, good enough to contend for low-cost leadership. This includes the ability to manage diseases—not just care inputs—for patient populations who are, on average, getting older and sicker. It also requires organizing a superior health care delivery system,

integrating a wide range of care providers, and sharing risk widely and deeply via capitation.

- *Information-processing abilities*, good enough to contend for quality leadership in care-process and care-outcome management.

- *Administrative management abilities*, good enough to contend for high-profit leadership, given the 25 percent of revenue that Pennsylvania lets an HMO retain for administration and profit.

For those who lead efforts to develop physician entities over the next five years, these are some of the "lessons" so far from Pennsylvania's managed care history—as well as some of the "benchmarks" to aim to meet and beat. Good luck! ■

Managing Care for Pennsylvania's Uninsured: An Update

Managed care is playing a larger role in health care delivery as we head for the turn of the millennium—not only in the Corporate America marketplace, but in serving the needs of our uninsured as well.

For the past three years, PENNSYLVANIA MEDICINE has brought you news of three innovative managed care plans in the commonwealth—the Family Care Network, the Lancaster Community Health Plan, and HealthChoices. Here, we offer a brief explanation and update of each.

The **Family Care Network** launched in January 1994, matches Medical Assistance (MA) recipients under 21 years of age with primary care providers to create a "medical home" for them.

Under the plan, recipients are given a choice of a list of participating primary care providers. If they do not choose a provider, one is assigned for them, though assignments can be changed under certain circumstances. Participating primary care providers receive a monthly case management fee plus MA fees for all screening and treatment provided to a patient, as well as for coordinating all referral care.

To date, the plan is almost fully operational in 57 of 60 targeted counties. Few problems have been reported.

Like the Family Care Network, the **Lancaster Community Health Plan** also seeks to create a medical home for its clients, offers a case management fee, and pays MA fees for services provided; the difference is that the plan is intended for the entire MA population of Lancaster County.

The plan began operation this past May, and as reported in PENNSYLVANIA MEDICINE last month, more than 60 percent of those patients eligible had signed up for the plan within the first four months. Provider participation at that time was even greater, at 87 percent. The plan's big news at summer's end was being chosen to receive one of 25 grants nationwide rewarding models of health care delivery on the local level.

Plans to create HealthChoices, a managed care plan for 650,000 MA recipients in Philadelphia and the five surrounding counties, haven't moved so smoothly. Implementation has been put off until mid-1996 at the earliest, pending a third study on the plan's potential savings and how the Department of Public Welfare can better oversee the program.

Two earlier studies reached conflicting conclusions about whether the plan would save money or not. The third study is expected to be completed this fall. Keep an eye out in PENNSYLVANIA MEDICINE's "Integration Insider" for the results.

The Lung Center at the University of Pennsylvania Medical Center has just completed its 100th Lung Transplant

Our Lung Center is among the top five in the United States in number of transplants performed annually and is a major referral center for lung transplantation in the mid-Atlantic region. Pulmonologists and other physicians interested in learning more about our expertise in end-stage lung disease are invited to call 1-800-635-7780.

Practice Policies Must Do More Today

Health care is growing exponentially more complicated; your medical practice's agreements and policies must do more today—for both your group practice and the doctors in it—than they ever did before.

Some apparently innocent situations may profoundly affect your practice. Dealing with these on a per-case basis—because your practice documents are out of date, largely ignored, or simply nonexistent—is dangerous. It assumes that nice people—and all of your partners are always nice people—will not sue you. The reality is that nice people *will* sue you if they believe they have been wronged.

Therefore, it is a good idea to treat all your doctors fairly and *by established guidelines* that are accepted by consensus. If your practice documents reflect your true working intent—if they are in place, adhered to, and actually doing what you want them to do—they can prevent situations that beg to be resolved in court.

Standards do exist for establishing a medical practice's inter-doctor, income division, employment, and shareholder agreements and policies, but these constantly change as the dynamics of health care evolve.

These documents must reflect not only the group's consensus, but also the current reality of how doctors' incomes and workloads phase up or down, and how physicians partially retire, leave the practice, and otherwise interact. Making ad hoc decisions about important matters because of inadequate or absent documents invites unnecessary trouble and is almost proof positive that you will (and intend to) treat different physicians differently.

How to do it

- Take a proactive approach to maintaining the relevance of your practice agreements and policies, and adjust them in a continuing process that is sensitive to marketplace realities.
- Your practice's executive committee, including your practice

administrator as a nonvoting member, should keep the practice's members informed about what it is doing and about changing conditions. Your practice administrator should be responsible for doing the necessary research and developing consensus recommendations. Get outside professional help if you need it.

- At least once every two years—annually is better—the committee should formally review and revise your agreements and policies; your year-end practice meeting is the most appropriate forum.

- Question everything. It is worth running the numbers and investigating the hypothetical situations, as you may realize—to your own surprise—that values your practice installed not very long ago are now far too low or too high and must be changed.

“Some apparently innocent situations may profoundly affect your practice.”

- Consider apparently ridiculous eventualities. Ask, “What happens if four of our eight doctors leave at the same time?” and “What happens if they form a new practice and compete with us?” Disasters and emergencies do happen. Be prepared.

The following scenarios, which involve a typical but hypothetical eight-physician family practice, are based on actual experiences in competitive Pennsylvania markets.

Phasing down

A physician who has been a major producer in your practice for 25 years requests a slower pace. He suggests that, even working only four-and-a-half days and foregoing on-call duty, he will remain valuable to the practice. You know that this physician will produce, even in partial retirement, so you agree.

The Health Care Group®

Another physician requests phasing down, but—for valid reasons—you do not want to grant the request. Suppose this physician is the only woman on your staff. Regardless of your reasons, you are treating her differently than you treated her male colleague, which looks like discrimination and invites legal action.

You grant partial retirement to two physicians. When a third requests the same thing, you realize that your group now has only six fully producing physicians. If you allow a third phase-down, you will be paying three significant salaries to physicians for part-time work, as well as putting a strain on the remaining full-time doctors.

Denying the third physician's request invites legal action, but granting it overloads the system, forces you to hire more help, and invites future phase-down requests. Although releasing all three physicians and hiring a full-time resident might make the most sense in terms of efficiency, this might be difficult or impossible for the practice to do.

Practice agreements regarding partial and full retirement are essential, especially in practices with physician partners nearing retirement age. Your policy should control the seniority and number of physicians eligible for a phased-down work schedule, as well as hours, duties, call, and pay arrangements. This assures the practice will be adequately staffed, without undue financial hardship.

Buy-ins and pay-outs

Six physicians have bought into the practice, but when the offer is made to the seventh, he finds the terms unacceptable or simply rejects the idea. “Pay me more than you did last year,” he tells you, “but don't pay me as much as a partner.” Now, in effect, a lesser number of doctors is buying out a greater number, and the leverage—the risk associated with the buy-outs—has become critical. Perhaps your buy-in rate is *acceptable*. If your agreement states that once a

doctor is offered a buy-in, he must accept, then your practice is legally covered.

In contrast, some practices are now refusing to offer buy-ins. If one of your doctors was hired with the verbal agreement that she would be made a partner, but now you are calling the deal off, you can be sued for breach of contract.

Many Pennsylvania practices are revising their buy-in/pay-out agreements. In response to market forces, a practice may change its income division methods and adjust its buy-out to reflect the new reality.

Problems arise when physicians refuse to go along with the new arrangements. It makes sense for a doctor with a previous contractual agreement to refuse to sign your practice's new, big-dollar buy-out agreement, and retire.

Physician departure

If your practice draws its patients from specific managed care plans, as long as departing doctors agree to leave the plans in which the practice participates or to compete outside a 10-mile radius of your coverage area, you may decide to allow your doctors to leave and compete with your practice.

Suppose your practice has merged and is now significantly larger. Should your shares be worth net book value, or because the practice is probably worth more, should your shares be worth more?

How much notice should your doctors give when they leave? In a competitive market, talent is in demand. You must strike a delicate balance between interfering with a physician's opportunity to seek a better position and the necessity of keeping your practice competitive by offering patients the hours and services they demand—and third-party payers are eager to provide—so they also remain competitive.

The contributing author, Sandra E.D. McGraw, JD, MBA, is a principal attorney and consultant with The Health Care Group® and Health Care Law Associates, PC, based in Plymouth Meeting.

TERRESTERIAL CAPITAL CORP.

(Practice Management Group)

To: Practitioners

From: Terrestrial Capital Corp.

Terrestrial Capital Corp. (TCC), a wholly owned subsidiary of Terrestrial Capital Holdings, Inc., announces the expansion of its practice management group's financial service operations.

Terrestrial Capital Corp. (TCC) will provide small to medium practitioners flexible account receivable financing in amounts of \$50,000.00 to \$150,000.00 per month, by utilizing third-party accounts as collateral on an ongoing basis.

Cost (1) (2)

rate established as "prime" plus +/- % with funding level based on prior monthly collection history.

Structure

Medicare, Medicaid; Other third-party plans; no self-pay.

- (1) The funding is structured as an ongoing forty-five (45) day transaction.
- (2) The "rate" quoted for the financing will be determined by Terrestrial Capital Funding, Inc.

A low-cost billing and collection service is an integral part of the financing.

It is anticipated that the expanded services provided by Terrestrial Capital Corp. (TCC) will be offered to qualified practitioners beginning in October 1995.

You Can Help Promote Use of Mammogram Benefit

Eileen Queenan
Michelle Penvose

In several columns during the past few years, I mentioned how proud we were of the Keystone Peer Review Organization's Beneficiary Outreach Program. An example of some of the ideas generated by the staff who work on outreach projects is reflected in this article, which was included in KePRO's 1995 Annual Report. As you will see, the well-being of the Medicare beneficiary is the primary focus of this program.

—Donald E. Harrop, MD, KePRO President

Since January 1, 1991, Medicare has covered screening mammography, on a once every two-year basis, for the early detection of cancer. It has also provided coverage for diagnostic mammograms when signs or symptoms of cancer are suspected.

Yet in calendar years 1992 and 1993, the number of non-HMO Medicare beneficiaries who took advantage of the screening mammogram benefit represented only 37 percent of all women eligible for the benefit, with only 28 percent of eligible African-American women obtaining a screening mammography. In Pennsylvania, the overall use rate, and the rate for African-Americans, was also 37 percent, with a high overall use rate of 48 percent in Montour County and a low of 27 percent in Schuylkill County.

None of these numbers seems satisfactory when we realize that between 52 and 73 of every 100 Medicare-aged women who are not in HMO programs fail to use the mammogram benefit.

Numerous studies have documented reasons why women resist screening mammography. Cost is certainly a consideration, even among Medicare beneficiaries who may still be responsible for deductibles, copayments, and associated physicians' fees. Fear of being diagnosed with cancer is another, as is the associated pain or discomfort sometimes reported by women who have undergone mammography.

This year, a number of organizations throughout Pennsylvania and the United

States initiated major campaigns to encourage women to undergo mammographic screening, and many of them addressed the issues of cost, fear, and pain. Offering financial counseling, providing statistics about cures with early detection, and encouraging women to take a preventive step that can save their lives are vital. But there may be more that we, and other concerned parties, can do at little to no cost. One way is to anticipate and address in advance some of the "softer" reasons why women avoid mammographic screening.

Patients are persons

For the past few months, several members of KePRO's staff have worked as part of a Mammogram Project Team, to develop ways to encourage more widespread use of Medicare's mammogram benefit. The effort has special meaning for three of the nine team members: Two lost their mothers to breast cancer; the third was luckier—a screening mammogram identified a very small malignancy in her mother's breast three-and-a-half years ago. (Following prompt treatment, she has shown no recurrence or complications since January 1992.)

Among other efforts, the Mammogram Project Team has gathered information about resistance to mammogram use in several ways. Because the Paperwork Reduction Act precludes us from routinely conducting formal surveys, we have relied on other methods of exploring the issue. Some of us have used our role as patients to examine what we like or dislike about the mammogram experience.

Other members, who conduct extensive in-person community outreach to routinely encourage the use of the mammogram benefit, have received personal feedback from Medicare beneficiaries about the benefit and the test. Still others network with community groups and friends, while our staff epidemiologist and clinical coordinators research previous studies on the topic. We have also spoken with several providers, toured a

Ms. Queenan is director of healthcare improvement/outreach, and Ms. Penvose is hotline coordinator, Keystone Peer Review Organization.

mammography facility, and obtained some information from hospitals in the course of a local cooperative project involving breast conserving therapy.

Our informal research made us aware of the following issues:

Modesty

While a number of Medicare beneficiaries will ask questions about mammograms following KePRO educational sessions, they generally do so in one-on-one conversations following the KePRO presentation. Rarely is the topic discussed with an audience present.

This seems to be an issue of modesty, and there may be ways to address it. For example, does your facility have a separate changing area and waiting room for mammogram patients? Do you have a female radiology technician available to perform the mammogram for women? (Men are eligible for the diagnostic mammogram benefit.) Why not advertise this through posters, articles in local papers, etc.?

Privacy

Some physicians' offices and testing centers use sign-in sheets as a method of keep-

ing track of patient arrivals. Patients fill out their names, the time of arrival, and sometimes the reason for the visit. While the use of sign-in sheets is more efficient than having patients cluster around the reception desk to notify someone of their arrival, some patients dislike advertising to everyone who arrives after them the reason for their visit to the office or testing center.

Similarly, the patient may be called to the reception desk to verify demographic and billing information on file. Because the patient is standing at a counter, with several clerical staff behind the counter answering phones, the conversation between the health care center worker and the patient is sometimes loud enough for everyone in the waiting room to hear. It may sound something like:

"...and do you still live at 1234 Anywhere Street? And is your phone number still 123-4567? And are you just here for a check-up, or are you having any problems? Oh, it's just a routine mammogram? Okay, well, have a seat. We'll call you in a few minutes...."

The lack of privacy may not be an issue with some patients, but it is sometimes expressed as a concern by others. →

Patient-Friendly Mammography Checklist

- ☒ Female technician available?
- ☒ Private changing area/ waiting room?
- ☒ Patient control of compression level?
- ☒ Advance instructions provided?
- ☒ Immediate check of film quality?
- ☒ Immediate physician reading?
- ☒ Two-year tickler for reminder notices?

Discomfort/pain

Reports of discomfort during the mammogram procedure are fairly common. Does your facility allow the patient to control the level of pressure/tension used during the examination? Although many do, few advertise this. Telling the patient to communicate how she feels during the screening, or even to say "when," may minimize some of her apprehension with the test.

Cost

Numerous organizations and businesses sponsor financial assistance programs which enable women to obtain mammograms at little to no cost, or which supplement Medicare or insurance payments. Some counties have voucher programs which help with the copayment for which Medicare beneficiaries are responsible, securing funds through events like races.

One senior center we contacted has a savings program in which women contribute 50 cents each week to individual locked boxes. By the time each woman is scheduled for her next mammogram, she will have saved enough to pay for what Medicare doesn't cover. There are numerous creative ways in which senior advocates and other interested parties can assist patients in addressing the cost issue.

Access and safety

While mobile mammography units operate throughout the state, not all areas or neighborhoods are served by mobile units. Some facilities report that sending the units to shopping centers, farmers' markets, and food banks seems to facilitate access, since these sites are usually located on local bus routes.

For women for whom travel may be a physical hazard (e.g., they live in high crime areas), families and friends can assist by accompanying the patient to the mammography appointment, or older citizens can travel in pairs or groups, using a buddy system.

Hassle

Both beneficiaries and facility personnel report that the use of one-year tickler systems to remind women to schedule another mammogram can cause problems. Because Medicare pays for screening mammograms only once every two years, some patients have inadvertently incurred personal cost by responding to an annual reminder notice. Some facilities

have responded by including a special notice to Medicare beneficiaries on the reminder card, others send the reminder notice to the patient's physician, and some are investigating the use of tickler systems which allow for one-year or two-year reminder notices.

Another hassle involves the occasional billing error, in which a diagnostic mammogram is reported as routine screening. Patients may be able to assist in preventing this problem by making sure that the reason for the diagnostic screening (e.g., evaluation of a lump) is clearly communicated to personnel involved in providing the mammogram. This is increasingly important as it becomes more common for women to schedule mammograms themselves, rather than having a physician's office staff do it for them.

Finally, failure to provide advance instructions on what to wear can inconvenience patients who must remove many garments rather than one or two because they were not told how to dress.

What do patients appreciate?

Beneficiaries report that they appreciate having the mammogram checked for quality immediately, so that, if necessary, the screening can be repeated right away before they leave. With some tests, the need to repeat can mean a wait of several days to two weeks, with the patient worrying the whole time that the *real* reason the test must be repeated is that an abnormality was found.

They also like having a doctor read the film promptly and report preliminary results right away, before they leave. This, too, can save days and weeks of needless worry.

Increasing use

The effort to encourage Medicare beneficiaries to use the screening mammography benefit includes multiple agencies and attention to factors such as cost, fear, and pain. Further encouragement may be provided by health care providers, patient advocates, and even patients' families by anticipating other issues surrounding mammography screening, including concerns for modesty, privacy, comfort, and convenience. By addressing these issues in advance, and consistently advertising the benefits of mammography, and the discretion and efficiency with which screenings can be provided, we may be able to increase the use of this valuable Medicare benefit. ☺

ST. CHRISTOPHER'S
HOSPITAL FOR CHILDREN

The Orthopedic Center for Children

St. Christopher's Hospital for Children and the Department of Orthopedic Surgery at Medical College of Pennsylvania and Hahnemann University are pleased to introduce the Orthopedic Center for Children. Our highly skilled, widely renowned practitioners bring their expertise in pediatric sports medicine, cerebral palsy, limb lengthening and a broad range of other medical and surgical orthopedic treatments for children. We offer services at five convenient locations: St. Christopher's Hospital for Children (our main office); Hahnemann University Hospital in Center City Philadelphia; Bryn Mawr, PA; Marlton, NJ; and Somers Point, NJ.

Clockwise from top:

Peter D. Pizzutillo, MD

*Director, Orthopedic Center
for Children*

B. David Horn, MD

*Attending, Orthopedic Center
for Children*

Dorothy Burke, RN

Nurse Clinician

G. Dean MacEwen, MD

*Attending, Orthopedic Center
for Children*

For appointments at the Orthopedic Center for Children,

Informed Consent: The Favorable, Yet Troubling Decisions in the Case of *Chrzanowski v. Shaikh*

Recent decisions by the Pennsylvania Common Pleas and Superior Court in *Chrzanowski v. Shaikh*, were favorable to the involved physicians. Nonetheless, this case raises the specter of future expansion in informed consent law. It also presents two conclusions by a jury that may be different from the conclusions the medical profession would draw.

The case can be quickly summarized: The referring physician ordered a CAT scan. Contrast material was injected into the patient for the scan, and the patient ultimately suffered irreversible kidney failure, allegedly caused by an allergic reaction to the contrast material, and died.

• The jury rendered a verdict against the physician who referred the patient for the scan, due to lack of informed consent; however, the physician who performed the scan was absolved. The referring physician sought a judgment from the trial court that he could not be liable. The trial court agreed and entered judgment in favor of the physician. The plaintiff later appealed to the Superior Court, which affirmed the lower court's decision.

The jury reached surprising conclusions to the following two questions:

Who is responsible for providing information for an x-ray study involving intravenous radiolcontrast? The referring physician simply ordered the CAT scan; the physician who did the scan logically seems the physician best suited to informing the patient of the risks of injecting the contrast material. The jury's decision to absolve the physician who did the scan and hold the referring physician liable seems contrary to logic and common practice.

Must the physician inform the patient of all risks? Informed consent

requires the physician to inform the patient only of material risks and alternatives. Previous court decisions held that there is no informed consent requirement for medications. Testimony at trial indicated there is one-percent risk of reversible kidney failure from this procedure, but virtually no risk of irreversible kidney failure. Arguably, because the risk is so small, neither physician should have been obligated to inform the patient of the risk of irreversible kidney failure. The jury concluded to the contrary.

The jury's conclusions were surprising but the case on appeal centered on a different question: *Does the physician have to obtain informed consent if there is no "touching"?*

In Pennsylvania, unlike most jurisdictions, informed consent law is based upon a battery, not a negligence, theory. A battery is generally defined as a "harmful or offensive touching without consent." In *Gray v. Grunnagle* [423 Pa. 144, 223 A.2d 663 (1966)], the Pennsylvania Supreme Court concluded that in medical situations, the consent required must be informed (under a battery theory). This means the patient must be told the nature of the procedure, the material risks, and the alternatives by the physician.

Where the battery theory is troubling to some courts is in its requirement that there be "touching." When a physician prescribes a drug—even one with potentially dangerous side effects—there is no touching by the physician in the administration of the drug. Therefore, at this time, there is no need for informed consent, even though the risks associated with the side effects may be considerable and serious.

When a physician injects a drug, there is a touching; however, the

touching—the injection itself—doesn't cause the harm. It's the injected drug which poses the threat. So informed consent in Pennsylvania would involve an explanation that the needle will cause temporary skin discoloration, not the potential side effects of the drug.

Both the Common Pleas Court and the Superior Court on appeal concluded that the referring physician could not be liable under an informed consent theory because there was no "touching." The Superior Court, while it was bound by precedent to reach that conclusion, nonetheless expressed its reservations by reiterating its comments in an earlier case:

It may be time for the Supreme Court to reconsider its decision in Gray. The greater use of various drug treatments has led to a situation where the risk associated with adverse side effects may be considerable. Further, there is the possibility that, in light of adverse side effects, a patient may wish to choose an alternative treatment. A patient's decision to undergo drug therapy should be no less informed than a decision to undergo surgery. The law should require that a physician provide his patient with all available information and options.

This judgment has not changed the current legal thinking on informed consent, but does raise the possibility of a major alteration in the mechanics of the informed consent if a case like this reaches the Pennsylvania Supreme Court again.

The cautious physician should draw two conclusions. First, until the Pennsylvania Supreme Court has spoken again, the cautious physician should carefully discuss with the patient potential side effects for drug treatments that present any meaningful risk, and document the discussion in the medical record. Second, the cautious physician, whether acting as the referring physician or the physician providing the treatment, may want an agreement—possibly even in writing—concerning who will provide this type of information.

Kenneth B. Jones, Esq., Society general counsel, and Jaan E. Sidorov, MD, chairman of the Society's Professional Liability Insurance Appeals Committee, contributed this article at the request of the committee.

ARE YOU CONCERNED ABOUT . . .

- Interference in medical decisions?
- Loss of professional prestige and credibility?

AMA NEWS

AMA RELEASES REPORT ON STUDY OF THE FEDERATION

The AMA in late August released an interim report on its Study of the Federation project. The report, excepted here, provides an overview of the concepts which could serve as the foundation for a new Federation of Medicine.

Introduction/background

The Study of the Federation is an effort by the organizations which comprise the current Federation of Medicine to identify how medical associations can best meet the future needs and concerns of physicians. The objective of the project is to produce recommendations that redefine relationships in organized medicine in order to:

- enable the medical profession to speak with one voice on critical issues;
- create more effective ways to accomplish work on behalf of the medical profession; and
- minimize duplication of services by enabling each element of organized medicine to do what it does best.

An ad hoc committee of the AMA board recommended that the Study of the Federation be conducted by two deliberative bodies—a consortium of more than 200 members nominated and supported by their medical societies, and a smaller 28-member project team. The project team focuses on strategy development, and the consortium focuses on direction setting and strategy evaluation.

The participants in the study reflect a demographic cross section of medicine today, representing geographic, gender, practice arrangement, and age categories. Participants are both physician members and medical society staff drawn from all elements of organized medicine, including AMA, state, county, specialty, ethnic, and other groups.

Specific proposals

The consortium is a study and analysis body. Its sole purpose is to develop recommendations on how to improve organized medicine and enhance its ability to serve physicians in the future.

The consortium has identified five elements which could define a new Federation of Medicine:

1) *Formalizing the new federation within the framework of the AMA.* The project attempted to define "federation" and formalize a federation. That formalization could result in a new "umbrella" organizational element, or it could exist within the current framework of the AMA.

The consortium concluded that a major new umbrella organization is not needed nor desirable and that the AMA is the logical framework for a new Federation of Medicine. However, the AMA will have to change in some ways to fulfill that role successfully.

2) *Federation Coordinating Committee.* This new mechanism would serve as a transitional agent to facilitate the development of a new Federation of Medicine. The committee would be a forum to encourage cooperation and coordination among the organizations that comprise the new federation.

The committee could work with medical associations to:

- help coordinate responses to key issues (policy analysis, advocacy efforts, etc.);
- identify opportunities to work together in providing products and services to physicians;
- serve as a forum for resolution of concerns and disputes;
- promote information and database sharing;
- help clarify roles to reduce duplication of effort and increase efficiency throughout organized medicine; and
- enhance communications.

Exact configuration of the committee will require further discussion.

3) *Representational changes.* Organized medicine should reflect the diversity of physicians' professional lives, the consortium believes, and the representational systems should relate to physicians along five dimensions: 1) geographic location; 2) specialty; 3) type of practice arrangement; 4) career stage; and 5) demographic or other special groupings. Consequently, the consortium is evaluating a number of possibilities, including:

- expansion in the number and variety of AMA sections;

- proportional representation of specialty societies and sections in the AMA House of Delegates; and
- representation of large groups and other practice arrangements in the AMA House of Delegates.

However, the consortium has not yet reached a firm consensus on this.

4) *Collaborative efforts.*

Collaborative efforts among medical associations are seen by the consortium as ways to eliminate overlap and increase efficiency, strengthen linkages among medical associations, and enhance revenue flows to medical associations. Formal joint ventures could include a physicians' purchasing service or practice support service, through which the AMA and specialty societies would develop and distribute practice parameters, procedure codes, and related products that would be helpful to physicians in their day-to-day practices.

5) *Participatory enhancements.* The consortium envisions a new, non-governance organizational element which it tentatively calls Topic Interest Groups (TIGs). TIGs would serve as discussion groups, probably through electronic bulletin board, on specific topics (e.g., practice management, coding, ethics). TIGs would also serve as information conduits from medical associations to their members.

Next steps

After the consortium reaches consensus on its specific recommendations, it will have to consider them from a systems perspective to ensure that the organizational structure and work processes that are implicit in the recommendations are viable and will fulfill the design criteria, established at the outset of the project, for a new Federation of Medicine.

The purpose of the Study of the Federation is to develop recommendations on ways to improve organized medicine and enhance its ability to serve physicians in the future. However, implementation of the consortium's recommendations falls within the purview of each individual medical association. Once the study is complete, the organizations which comprise the federation will have to consider the recommendations of the consortium and decide how to implement them.

The current plan is to develop and distribute another progress report on the Study of the Federation in December 1995. That report, which will be submitted to the AMA House at its 1995 Interim Meeting, will contain recommendations for the overall framework of a new Federation of Medicine and an analysis of the complementary roles of medical associations in responding to the needs and concerns of physicians. The final report of the Study of the Federation, which will also be submitted to the AMA House, is scheduled for June 1996.

The deliberations of the consortium would benefit greatly from feedback from members, delegates, and federation organizations. Comments and suggestions can be sent to the Consortium Project Team via fax at (312) 464-5884.

CHANGING STAFF ROLE IS FOCUS OF OMSS PROGRAM

The American Medical Association Organized Medical Staff Section (OMSS) will hold its Twenty-Sixth Assembly Meeting from November 30 through December 4 at the Washington Hilton and Towers Hotel, Washington, DC.

To help physicians respond effectively to the changing roles and responsibilities of the medical staff, OMSS is offering an educational program, "Creating the Future and Getting There First," on December 1. The program will focus on changing the medical staff paradigm, thinking in the future tense, and strengthening the physicians' leadership role in the governance of hospitals, integrated delivery systems, and managed care organizations.

For more information on the assembly and educational program, call the AMA's Department of OMSS at (800) AMA-3211.

The AMA in early August officially announced the transition of its Hospital Medical Staff Section to the OMSS. The expansion, written into the AMA bylaws in June, allows the AMA to better meet the needs of physicians working not only in hospitals, but also in new health care delivery systems, which are emerging as a result of managed care. The State Society's House of Delegates will consider a similar move this month at its annual business meeting in Hershey.

MEDICAL SCHOOL NEWS

MCP TACKLES SHORTAGE OF ACADEMIC WOMEN LEADERS

The first class of fellows in the Medical College of Pennsylvania and Hahnemann University's Executive Leadership in Academic Medicine Program for Women gathered in Philadelphia last month for the initial phase of its studies.

Although the number of women entering medicine has steadily increased in recent decades, there are still a mere handful of women leading our nation's medical schools and academic health centers. There are just two women serving as deans among the nation's 125 allopathic medical schools and two among the 16 osteopathic schools. Only four percent of medical school department chairs are women.

The goal of the national program, sponsored by the university's Institute for Women's Health, is to support women leaders in academic medicine and achieve parity in the ranks. The program offers extensive networking and mentoring opportunities.

Session I, held September 8-17, included intensive work in the paradigms of corporate and academic leadership, creativity in problem solving, strategic planning, financial management, emerging issues in academic medicine, and communications. Session II is set for April 1996.

For more information about the program, call the university at (215) 762-3985.

PHILADELPHIA TEACHERS GET "HEART SMART" AT JEFFERSON

Three Philadelphia middle school teachers took on the role of student this summer by participating in the Middle Schools Science Education Initiative hosted by Jefferson Medical College of Thomas Jefferson University.

The six-week program allowed the teachers, from East Mount Airy, Southwest Philadelphia, and North Philadelphia, the opportunity to create a written and computer model of the human heart. The teachers will bring their new knowledge and instructional materials back to their classrooms this fall.

The teachers used library resources and the Internet to develop their age-pertinent, user-friendly computer modules. By using the "point-and-click" method, students can access information on the parts and functions of the heart and related topics, such as hypertension, heart disease, and CPR.

The module is interactive, enabling students to answer review questions after they complete certain portions of the program. In addition to text and graphics, sounds are included to make the module educational, visually attractive, and entertaining.

The initiative was launched in the summer of 1995 to help science teachers from mostly minority-attended, Philadelphia-area schools gain new scientific knowledge, to elevate the scientific literacy of their students.

ANNUAL BUSINESS MEETING

There's Still Time...

...to enroll in "Improving Your Practice Efficiency with Electronic Technology," a computer seminar to be held from 1:30 to 5:30 p.m. on October 26 at the Hershey Lodge and Convention Center.

Sponsored by the State Society's Hospital Medical Staff Section (HMSS) and the Institute for Physician Leadership of the Educational and Scientific Trust as part of the HMSS annual meeting, the seminar will allow physicians to observe physician "experts" demonstrating different types of medical computer applications.

Cost of the seminar is \$100 for Society members and \$135 for nonmembers. For further information, call the HMSS at (800) 228-7823. The seminar carries four hours of Category 1 continuing medical education credit.

Defending Good Medicine

David S. Masland, MD

This month the House of Delegates will vote on the recommendation of the State Society Board of Trustees to allow the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) to insure physicians who are not members of the Pennsylvania Medical Society. Having served as president of the Society in 1976 at the time PMSLIC was being formed, I took part in the discussion which led to the conclusion that PMSLIC would provide coverage only to members. Subsequently, I was elected the first chairman of PMSLIC and served in that capacity until 1989.

I firmly believe the initial decision to restrict PMSLIC to insuring only members was an appropriate one in 1976. However, to suggest that a marketing strategy (which is really what the eligibility rule is) that was effective 20 years ago would still be effective today just doesn't make sense.

PMSLIC was formed for a number of reasons. First and foremost, all carriers except the Medical Protective Company (which had very selective underwriting criteria) were fleeing the state. Had PMSLIC not been formed, Act 111 would have triggered a state-run insurance carrier for all, an alternative viewed by physicians as unacceptable.

There were other compelling reasons to start PMSLIC. Decisions regarding the merit of defending or settling claims were being made by non-medical people on a purely economic basis. The rate structure of premiums was arbitrary. Neither the State Society nor the Insurance Department could force commercial carriers to disclose justification for their rate making. Cause of loss statistics were not available, and risk management then—and to a large extent now—was something commercial carriers paid scant lip service to.

The problems of availability and trust were nationwide. Physicians in state after state banded together to form physician-operated and, in most instances, physician-owned companies.

In forming PMSLIC, we decided that only members of the State Society could be

insured. We looked at the fact that it was members who capitalized the company, members who banded together to meet the challenge as other carriers abandoned us, and, therefore, members who should benefit from the formation of the company. No other alternative was seriously considered unless we were to be forced to do so by an outside entity. PMSLIC has operated that way since the beginning and has become the lead writer for physicians.

Now, because of PMSLIC, attorneys know that if they bring a frivolous suit against a PMSLIC insured, there will be no shakedown settlement to avoid the cost of litigation. PMSLIC insureds know that decisions regarding rates and the merits of claims settlement are made by physicians. There is in place a risk-management program second to none.

Today, more and more of our colleagues, especially younger physicians, are practicing in groups or are employed or are contract physicians. We find ourselves in practices with physicians who have not joined organized medicine. As a result, PMSLIC cannot write their insurance. As this trend continues, the market for PMSLIC will shrink, and increasing numbers of Society members who want PMSLIC insurance won't be able to have it.

By allowing PMSLIC to write policies for nonmembers, the insurance company formed and run by physicians will remain viable and strong. I urge the PMSLIC board to continue to fulfill its commitment to supporting and endorsing membership in organized medicine. I urge the House to embrace the recommendation of the Society Board of Trustees to permit PMSLIC to insure physicians who are not members.

PMSLIC has become and will continue to be the gold standard. What I believe is important is not whether PMSLIC will insure members or nonmembers, but whether PMSLIC will remain an example of physicians taking control of a problem and providing a solution—and whether PMSLIC will remain an advocate for physicians in the courtroom and a defender of good medicine. ☺

Dr. Masland, a Carlisle internist, was chairman of the Pennsylvania Medical Society Liability Insurance Company from 1976 to 1989.

A MOMENT
IN THE LIFE OF A CAR COMPANY.

LOS ANGELES 3:50 pm PST.

WHEN MICHAEL WAS EIGHTEEN, he could move with all the ease and grace of a Russian ballet dancer.

But Michael isn't eighteen anymore, he's thirty-three. So

when he faked right, went left, and spun back to the middle, his body didn't make the trip.

He went down, and within minutes his ankle was swollen to twice its normal size.

"I don't think I can drive," he says, limping off the court, helped by two friends.

"I'll drive," volunteers Jim, as they approach Michael's Volvo 960 Sedan.

"You know, I can drive if you want," T.K. replies, eyeing the car.

"No, that's okay. I got it," Jim says again.

"You sure? Because I don't mind."

This continues for another minute, rapid-fire and perfectly timed, a contemporized vaudeville act, until finally Michael says, "Would somebody just get behind the wheel?"

A soft breeze fills the evening. The sky is an essay on the

wonders and variations of the color red. It is a poet's dream.

All of this is lost on Michael, however. "He was going for me, not the ball. He tried the same thing last week."

"A Volvo, huh," Jim asks, opening the sunroof.

"I put a spin move on him, made him look like a chump. He lost his mind," Michael offers again.

"You know, this car becomes you," T.K. says to Jim.

And they go on this way for awhile. Michael analyzing the play from every conceivable angle, formulating conspiracy and single-assassin theories. Jim and T.K. lost in the moment, more or less ignoring him.

From the stereo comes a voice, thick and sweet as Louisiana fudge.

Jim sings along. T.K. asks Michael if he can

borrow the CD.

This time Michael isn't listening. This time it's his turn to ignore them. "Hey guys," he asks, looking out the window.

"Why are we on a bridge?"

"There's a place right up the road a bit that has the best ice possible for that ankle of yours," Jim replies, continuing to enjoy the music and the drive.

Drive safely.

VOLVO

All Volvos feature an array of life-sustaining and luxury features. Volvo MSRPs range from \$27,100 to \$35,260. Car featured is the 960 Sedan with an MSRP of \$33,960. For more information, call 1-800-960-9988 or visit our Internet site at <http://www.volvocars.com>. All MSRPs (Manufacturer's Suggested Retail Prices) exclude state and local taxes, optional equipment, special equipment required by states, retailer prep, registration fees and \$495 destination charge. Pennsylvania Medical Society members are slashing their premium costs with Dodson's Dividend Plan for workers' compensation insurance.

A total of almost \$4 MILLION in dividends has been paid to insured members since 1973.

Excellent Savings Potential

- 5% discount on premium rates when policies are issued
- Yearly dividend opportunities

A dividend has been returned to insured members **every year** for 21 years.*

- Dividend paid in 1994—
\$231,166.43
- Dividends paid (since 1973)—
\$3,906,486

**State laws prohibit insurance companies from guaranteeing future dividends.*

Interest-free Premium Payment Plan

Flexible premium payment options are yours with Dodson Group. Your premiums may be paid in convenient installments — **all with no interest fees or service charges.**

Outstanding Personal Service

Claims are handled locally by competent adjusters carefully selected for their expertise and ability to serve our policyholders.

- Upon settlement, most claim payments are in the mail within 48 hours.

Our professional home office and field staffs are ready to assist you in person or by phone.

16 Taming the CAT Fund: Two Decades of Challenges

Your colleagues across the state are as confused and upset as you about the emergency surcharge levied by the Medical Professional Catastrophe Loss Fund. How and why did this happen? The Society's general counsel takes an historical look at the fund and offers the Society's realistic solution to curtail similar "surprises" in the future.

“OK, Tom was right.

After forming our group two years ago, we really shopped around for medical

liability coverage. Not all of us were in favor of the policy from the discount carrier. Especially Tom. He felt the risks of our profession were already high enough, and we couldn't trust just anyone to protect our practice and our reputation. But Liz and I wanted to lower monthly expenses. We honestly thought we'd get the same peer review on claims that PMSLIC offers its policyholders.

Boy, were we misinformed. After Liz was sued, we found ourselves defending her actions to the very people we were paying to defend us. I mean, they're supposed to be on our side, right? I still can't believe how much time we've already spent trying to get our practice back on track. If we had gone with PMSLIC, we wouldn't be in this mess. I wish we had made the right move from the start. I wish we had listened to Tom. ”

SOCIETY OBJECTS TO PROPOSED 1996 CAT FUND SURCHARGE: The State Society's Board of Trustees on October 26 approved three immediate steps to object to the 1996 CAT Fund surcharge—tentatively set at 164 percent—and to fight for tort reform in Pennsylvania. The Society will: 1) request a meeting with Governor Tom Ridge and his key staff to tell them of the personal disaster for many physicians caused by the CAT Fund emergency surcharge, and to ask them to lower the 1996 surcharge; 2) charge the Society's Tort Reform Priority Work Group with developing a strategic plan for the Society to achieve public awareness of the professional liability problem in Pennsylvania, and to promote the adoption of meaningful tort reform; and 3) relay our concern about the emergency and 1996 surcharges to the public, members, specialty societies, county medical societies, and key legislative leaders. Also on October 26, more than 50 Society and Alliance members gathered at a press conference at the Capitol to support House Bill 2122 to reform the state's medical liability tort system. Look for photos and complete coverage next month in PENNSYLVANIA MEDICINE.

HOUSE ELIMINATES MANDATORY AMA MEMBERSHIP REQUIREMENT:

The House of Delegates, at its annual meeting last month in Hershey, voted to eliminate the State Society's mandatory AMA membership requirement, instituted in 1989. Recent surveys indicated that mandatory membership deterred physicians from joining the State Society, as well as county medical societies. The Society's board, which supported the move to voluntary membership, emphasized that it will continue to encourage all physicians to belong to the American Medical Association.

PMSLIC EXPANDING MARKETING BASE: The House at its annual meeting also voted to allow the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) to market and write insurance for all physicians in Pennsylvania. PMSLIC requested reconsideration of the membership requirement earlier in the year because of the growing trend in the commonwealth toward larger groups, often made up of both members and nonmembers. The requirement hindered PMSLIC from insuring such groups. PMSLIC remains a wholly owned subsidiary of the Pennsylvania Medical Society. The PMSLIC board has said it remains committed to the goals of the Society, and to running a company that is physician directed and dedicated to physician advocacy.

PPHP EXTENDS STOCK DEADLINE TO NOVEMBER 30: The board of directors of the Pennsylvania Physician Healthcare Plan, Inc. (PPHP) has announced that due to the level of physician interest in the stock offering, the deadline for subscriptions has been extended to November 30, 1995. To date, PPHP is over 75 percent of the way toward capitalizing the company, with physician investors from every major specialty, representing more than 80 percent of the counties across the state. For more information or additional copies of stock offering materials, call PPHP at (800) 556-8390.

BLUE SHIELD NOTIFYING PHYSICIANS OF TAX ID DISCREPANCIES:

Physicians whose tax ID number-name combinations do not match Internal Revenue Service (IRS) records have until November 27 to correct the information. According to Pennsylvania Blue Shield, notification letters required by the IRS were mailed on October 27 to alert providers if such discrepancies exist. If you received a letter and require additional information, call Blue Shield Provider Data Services at (717) 763-3224.

HOUSE PASSES DOMESTIC VIOLENCE BILL: The state House of Representatives on October 24 voted 199-0 to pass House Bill 1100, which prohibits insurance companies from discriminating against the victims of domestic violence. Virginia Hall, MD, a Dauphin County ob/gyn, testified in favor of the bill at a hearing earlier this year.

AMA NAMES SEWARD EXECUTIVE VICE PRESIDENT DESIGNATE:

P. John Seward, MD, a family physician from Illinois, was selected executive vice president designate of the AMA by its board last month. Dr. Seward was one of 164 applicants to replace James S. Todd, MD, who will retire in June 1996.

Retiring from Medicine: The Grief Process

John W. Mills, MD
Medical Editor

The suddenness with which I retired from medical practice on August 18, 1995, still haunts me as I work through the grief process and my sense of loss. Tossing my scrub shoes into the trash can had an unmistakable feeling of finality.

Having been in medicine since I entered medical school in 1949, it was a way of life. As a solo ob/gyn, I had weathered several malpractice premium crises. In an attempt to reduce my premiums, in 1978 I stopped doing obstetrics. But statistics doomed that decision—the impact of premiums didn't change. I continued major gynecological surgery for another seven years, until finally stopping altogether in another attempt to stem my losses due to premiums. In June 1993, I closed my office, but continued surgical and gyn assisting on a full-time basis. Even the insurance required for this level of practice seemed out of line to me. In all this time in practice, I had only one frivolous suit—now over seven years old—which is yet to be adjudicated.

The threat of a CAT Fund surcharge this year was the last straw for me. It prompted my sudden decision on August 18. Looking back, it's obvious to me that all of my major practice changes were clearly related to the complex medico-legal system in our country, especially in Pennsylvania.

Now that the surcharge is a fact and not a rumor, I feel vindicated to a degree. But upon further examination, I am also angry. We physicians are captive to Act 111, the only part left of 1978 tort reform that our state's legal system hasn't declared unconstitutional. Other professions carry such insurance, but their premiums are "peanuts" compared to ours. They have the luxury of an orderly reduced practice until retirement, as each professional sees fit.

Act 111 dictates how we retire. If a physician retains an active license to write spousal prescriptions, insurance is mandatory! Absurd! The alternative—an inactive license and no insurance. To my knowledge, no other profession has such a ridiculous retirement requirement, mandated by an attorney-dominated legislature.

Tort reform in Pennsylvania has been a top priority of the Pennsylvania Medical Society for many years. But the trial bar has a more powerful lobby and membership in the legislature than we do. The question of a constitutional amendment may also pose a problem. I'm no authority on such questions; I only raise it because it's just one more physician frustration which the citizenry of our state don't understand and could care less about. It's also an example of how completely the legal profession has us under its thumb.

It's fair to say that my anger is part of my grief process and that anger follows denial, which is useless in this situation. I've already tried to circumvent the anger. My wife, Jane, and I went to California for two weeks soon after August 18, to help our daughter and family settle a recent move. The list of things for me to fix, coupled with three grandchildren and some time working on locomotive 2353 (see my November 1994 editorial), distracted me temporarily. But the anger was still there and needed to be verbalized so I could get on with the process.

I've been fortunate to have served as the Ninth District trustee for the past six years, and I'm hoping for reelection for a final three-year term. That third term will keep me active in the State Society, where I can still be of use to my profession and indirectly to my patients.

Being your medical editor for the past five years has also meant a great deal to me. I hope I've contributed as much as I've been privileged to learn. Both the trusteeship and the editorship will help my transition to an acceptable retirement and to completing the final stage of the "grief process."

John Hobart's recent testimony in Harrisburg underscored our need for true tort reform and the urgency of the issues. Physicians have a growing awareness of the disarray of our legal system in the U.S.

Acceptance and resignation will ease my grief—but the injustices continue toward fellow physicians. ☺

PROTECT YOURSELF FROM DANGER

*With the one symbol that shields your profession—
no matter your specialty*

**Pennsylvania physicians are protected in their profession *only* by
the constant vigilance of the Pennsylvania Medical Society.**

We let you know of dangers ahead—alerting you to alarming regulations or legislation, clarifying coding and reimbursement complexities, informing you of prescribing and utilization cautions, and protecting the rights of you and your patients.

Imagine if: No one—with the resources and persistence to win—had challenged Medicare dual eligibility payments in Pennsylvania? Because we did, \$33 million has been returned to Pennsylvania physicians so far!

Imagine if: No one thoroughly scrutinized and strongly challenged state agencies' payment and regulatory practices?

Imagine if: Every insurance claim form you submit had to be officially notarized? We stopped that!

Imagine if: You had no one to turn to—who could speak across all specialties—when the big insurers interpret reimbursement rules the way they want?

Imagine if: No one challenged nurse practitioners and others as they push to practice primary care—prescribing, admitting, and referring patients—without the education, oversight, or safeguards you know are vital to patient care?

Imagine if: HMOs faced no organized, medically knowledgeable challenges to their “squeezing” of patient care?

**It's dangerous enough out there for physicians.
Challenge your colleagues to help minimize the risk:**

JOIN THE PENNSYLVANIA MEDICAL SOCIETY.

Tort Reform: Now Is the Time

Jonathan E. Rhoads Jr., MD

Now is the time for physicians to become politically active and speak to our state legislators demanding tort reform. The Medical Professional Liability Catastrophe Loss Fund (CAT Fund) has just announced an emergency surcharge of 68 percent to meet the shortfall in its obligations for 1995—for the first time in the 20-year history of the fund. In addition, increased premiums for basic coverage and a much higher surcharge for the CAT Fund are expected for next year.

Liability concerns have been with physicians for decades. In the 1970s, the costs of premiums were escalating rapidly in Pennsylvania, as in many other states. In the mid-'70s, insurance companies stopped offering professional liability insurance, and, with the threat of unavailability of liability insurance, the Society formed its own liability insurance company: The Pennsylvania Medical Society Liability Insurance Company (PMSLIC).

In those years, a tort reform bill passed the state legislature and was signed into law as Act 111. It provided for the CAT Fund, compulsory purchase of liability insurance upon threat of loss of licensure for physicians, and arbitration panels to keep cases out of the courts. Initially, the CAT Fund imposed a 10 percent surcharge on physicians' premiums, and arbitration panels were funded by a \$50-per-year charge to all physicians.

Eventually—due to complaints by the attorneys—the constitutionality of the arbitration panels was challenged in court, and they were found unconstitutional. However, the requirements to continue to maintain liability insurance and participate in the CAT Fund were not struck down at that time. As insurance payouts grew, the basic coverage was increased from \$100,000 to \$200,000.

By 1981, the State Society had identified tort reform among its highest priorities, and it has been so ever since. That same year, incoming Society Vice President John Y. Templeton, MD, headed a task force on liability reform which identified a

series of proposals to modify the tort laws, similar to the MICRA provisions passed in California a few years earlier.

The proposals sought: reductions of awards by collateral sources, structured awards, provisions for the qualification of expert witnesses, the two-year statute of limitations (except for minors), and repeal of joint and several liability, among other provisions.

During Dr. Templeton's excellent service on this committee, a bill with these provisions was introduced in the legislature, but never made any progress. There was no groundswell of support from physicians clamoring for tort reform. As he completed his term as past president, he turned the responsibility of this committee over to others, saying that the experience had been "frustration heaped upon frustration."

A few years later, with Donald Harrop, MD, as chair of the task force, we succeeded in passing a bill in the House but not the Senate, and no final action occurred. Physicians met with their legislators about the issue in lieu of a march on the Capitol, since the legislature chose not to be in session on the planned day of the march.

Since that time, the Society has been looking for a propitious moment to introduce a bill with the intent of changing the law. We hoped to incorporate it into health system reform legislation, but that opportunity never appeared.

Last spring, the Republican U.S. House of Representatives—strongly encouraged by pressure from many physicians—passed a measure providing for a cap of \$250,000 on non-economic damages in medical liability issues. The Senate narrowly tabled a similar measure a few weeks later, and while at this time that bill remains tabled, the idea of tort reform is gaining momentum and is still accomplishable.

As for regulation, we have seen the successful impact of many physicians pressuring for modifications: The receipt of 100,000 letters from disaffected physicians convinced regulators to restore the RBRVS conversion factor by 13 percent, to the expected level. Similarly, when

CLIA regulations were promulgated a few years earlier, they were modified substantially and favorably as the result of letter writing by physicians.

The surcharge percentage for the CAT Fund has been slowly increasing over a period of 20 years (see chart on page 17). As stated earlier, it started at 10 percent and a few years later began a continual climb: In the mid-'80s, it was running 70-80 percent; for 1995, the initial surcharge was 102 percent of basic premium.

With increasing national concern about the cost of medical care and increasing interest in cost containment, our 1993 House of Delegates adopted Policy 435.986: "The assertion by a physician that omission of marginally indicated tests or treatments from the care of a patient for cost containment reasons should constitute a valid defense against allegations of substandard care."

Tort reform success in the California legislature in the mid-'70s was the result of intense pressure by physicians. In addition, there were job actions by physicians, and California Medical Association President Joseph Boyle, MD, left his practice in Los Angeles to spend months in Sacramento insisting that the legislature pass MICRA. Prior to these reforms, liability insurance premiums in California were among the highest in the nation; today, they appear reasonable compared to many other states.

State Society efforts to pass legislation have been weakened by the absence of such intense physician pressure on legislators. It is much easier to amend legislation, or block

its passage, than it is to gain passage. To succeed in passing tort reform legislation, many physicians will have to hound their legislators, clamor for change, and not let our representatives rest until tort reform is passed. We must pressure them to cosponsor a bill, we must insist that it be reported out of committee, we must be sure that hostile amendments are defeated and that meaningful tort reform is passed in both houses. We can be very sure that our opponents will be lobbying hard against the bill.

In the '70s, increases in liability insurance premiums could be passed along to at least some of the payers. Since that time, we have had numerous legal restrictions on our fees, and managed care has further limited our fees. We can no longer recoup increased overhead expenses such as liability insurance, and physician incomes will be squeezed even further by the surcharge and increased liability insurance premiums.

The Pennsylvania Medical Society has created a priority work group on tort reform this year. In addition, our Quick Response Team will help negotiate tort reform legislation. However, it is most vital that there be a groundswell of physician pressure on the legislature to enact tort reform legislation. Lacking this pressure, it will be difficult to impossible for our lobbyists to accomplish much, as the legislature will presume that physicians are not much impacted by the costs of liability insurance.

Now is the time for physicians to visit and write their legislators, and demand meaningful tort reform. ☉

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

BLUES' REIMBURSEMENT, MANAGED COMPETITION, AND HOUSE BILL 630

Since the death knell was sounded to President Clinton's Health Security Act (House Bill 3600) on September 26, 1994, private insurers such as Blue Cross/Blue Shield have taken charge to advance managed care. Their main impetus for this health care delivery system has been the health maintenance organization (HMO). However, many inconsistencies and errors have been promulgated by these insurance companies.

During the recent Pennsylvania House Insurance Committee's hearings on House Bill 630: Rural Any Willing Provider, Blue Cross/Blue Shield attacked all any willing provider legislation. The reasons given range from simple-mindedness to dishonesty. The July *Blue Cross Bulletin* states that "managed care can lower health care costs without sacrificing quality or access." In reality, the packaging of cost containment, quality control, and increased access is an oxymoron for an HMO. The lead article in June's *Blue Cross Bulletin* fosters the idea that "any willing rural provider legislation will not improve access to care in rural communities." How can fewer physicians in Pennsylvania's rural physician shortage areas increase health care access by their participation in the Blue Cross/Blue Shield Keystone HMO plan?

The July *Blue Cross Bulletin* also relates that managed care meets the goals of lower health care costs, quality, and access by coordinating care through primary care physicians (PCPs). These PCPs have "accepted lower prices in exchange for having more patients sent to them." In rural Pennsylvania, however, Blue Cross cannot even guarantee more patients to its Keystone Health Plan physicians "since there are not enough dollars in most rural communities to attract health care professionals to practice there." House Bill 630 covers 62 of Pennsylvania's 67 counties.

One does not have to look further than our contiguous states of New Jersey and Maryland, which since May 1995 have passed anti-managed care legislation directed at health insurers' 24-hours maternity stay. The trend toward these shortened

hospital stays was started by Kaiser Permanente in California, which was also the first state to develop statewide HMOs. But the American College of Obstetrics and Gynecology this year called early discharges unsafe, since some problems may not be evident in the first day after delivery. Kaiser Permanente has begun sending mothers and newborns home in as little as eight hours!

Under Keystone's and other HMO physician contracts, doctors can be *delisted* or *deselected*—that is, eliminated from the HMO agreement without cause. This termination is called the "without cause" clause. No legal recourse exists for the physician to be reinstated when legitimate concerns are addressed. House Bill 630 incorporates protections such as "health care payers shall not include clauses in physician or other provider contracts that allow for the plan to terminate the contract 'without cause.'"

Some contracts under managed care also have other clauses such as the "non-disclosure" clause. This prevents physicians from disclosing quality concerns to patients and employers. Some sections can even prohibit physicians from discussing reimbursement concerns with patients which may directly or indirectly cause employees to disenroll.

Why has Blue Shield, which is Pennsylvania's largest health insurer, offered its 7,000 employees and their dependents the PremierBlue (indemnity-type) plan, but not Blue Shield's Keystone (HMO) or Select Blue (HMO/indemnity)?

Physicians now need to recognize the reinvention of President Clinton's managed care by private health insurers.

Joseph A. Giordano, MD
President Elect
Mercer County Medical Society

REEVALUATING THE STATE'S COST CONTAINMENT COUNCIL

A few evenings ago, I attended a meeting where three people came from the Pennsylvania Health Care Cost Containment Council and presented to our medical staff (and others concerned) the proposed acute myocardial infarction (AMI) study. I listened to confusing

instructions as to method that were not in any way organized or positive. What the goal of all this data collection was to be was not defined. We were repeatedly told that maybe after the data is collected, the goal can be determined.

The responses to questions asked, in my view, were inadequate and reflected uncertainty and lack of knowledge on the part of the presenters. The data were being collected without definition as to the meaning of certain terms that would very significantly alter the results if interpreted differently by the different collectors. There was no concrete evidence or even a feeling among the physicians present that the data, once collected, would be of any value. Questions trying to get definitive information were countered with such terms as "perhaps," "maybe," and "possibly," thus qualifying their statements.

It is of interest that there was nothing said during this entire session about the costs of collecting these data. The direct costs of the commission are small compared to the costs in personnel, computer time, and equipment for all the hospitals participating by legal fiat in this program in this state. I would project that—using a conservative figure of 100 hospitals in the state involved and a conservative figure of \$40,000 for personnel, computer usage, and other equipment costs for each hospital—the amount statewide would be about \$4 million a year for this function alone. Actually, such an amount would buy health insurance of a significant level for many, many people in Pennsylvania.

Not explained in my mind is whether we need this regulatory evaluation attempt and its expense to a greater extent than we need the monies for the care of people. I think not. The question, then, must be asked as to whether these evaluations are being done to show such studies improve care or save tax money in Pennsylvania. I have seen no data which indicate that either is so.

It would seem that the Health Care Cost Containment Council should also be evaluated and required to show its benefits to be further funded. Perhaps the money it spends and requires the hospitals to spend would be better used providing direct care.

The Presbyterian Medical Center of Philadelphia is accredited by the Pennsylvania Medical Society to sponsor continuing medical education for physicians.

All faculty participating in continuing medical education programs sponsored by Presbyterian Medical Center of Philadelphia are expected to disclose to the program audience any real or apparent conflict(s) of interest related to the content of their presentation(s).

Society Communications Go High(er) Tech

"Please don't call it 'Cyberspace.' The only people using that word are the folks who aren't here. Anyhow...welcome!"

With that, a member physician hailed the Pennsylvania Medical Society for the first time on the Internet, a proliferating, worldwide electronic communications network. The Society had just announced its new online address—stat@pamedsoc.org—proclaiming that it had "entered Cyberspace," a popular term for the nebulous computer-based universe.

Whatever you call the latest technology, it is augmenting the ways in which members communicate with physician leaders and Society staff. Of course, traditionalists will continue to use the U.S. Postal Service or dial the for-members-only 800 number. But growing numbers find going online to be faster, more flexible, and more exciting. For them, the Society is building fax networks, and online e-mail and electronic bulletin boards. Not far behind is a home page on the World Wide Web.

E-mail/fax

In September, the creation of an e-mail address opened a new way for modem-equipped physicians to reach the Society through online services such as America Online, Prodigy, or Compuserve. Like the in-house versions that connect computer terminals within office buildings, online e-mail enables users to type brief messages on their computer, attach more detailed documents for review, and instantly send the whole package to another computer user with a few quick keystrokes. A major advantage of e-mail is that it can be sent any time, day or night—and responding is just as convenient.

Getting rid of paper appears to be the goal of many online physicians, but that's not yet entirely feasible. Without optical scanning equipment and software, printed documents from a third party can't be sent by e-mail. That is where facsimile transmission, or fax, comes in.

The Society has used broadcast fax—the transmission of one document to many recipients—for more than five years. Among the first to receive fax communiqués were members of the board, council chairs, and some committees. Technology upgrades recently allowed the addition of House delegates, county medical society executives, and teams of quick response physicians poised to contact legislators when "Calls to Action" arrive from the Society.

A relatively new variation on fax technology is "fax-on-demand" or "faxback." The Society will soon begin offering members faxed summaries of current issues, policies, order forms, and other documents. The process is painless: The requester dials an 800 number, is prompted to enter an ID number, selects either a document menu or specific items by using the keypad of their touch-tone phone, and receives the requested document by fax within minutes—at any time of day or night. In the future, this technology may be used for opinion polling, to make available House of Delegates materials, and for other purposes not yet imagined.

Fax systems offer all physicians quicker access to the Society. Research shows that 60 percent of Society members have a fax or direct access to one, but given the widespread availability of fax services at hotels, print shops, pharmacies, overnight delivery companies, and other locations, virtually anyone can call and order fax documents or send information by fax.

Electronic bulletin board

Meanwhile, nearly a quarter of the Society's members subscribe to online computer services. This requires a personal computer and a modem, plus the software to gain access to the service. Most services charge a fee, but Physicians' Online is offered to physicians at no charge because costs are covered by advertisers' subsidies, primarily from pharmaceutical companies.

Through an agreement with Physicians' Online, the Society has created an electronic bulletin board that offers more detailed documents, a greater range of service options, e-mail, and, in the future, a "forum" where physicians can post comments on current issues. Any physician using Physicians' Online can visit the Society's bulletin board to find descriptive information on the Society and its subsidiaries—even a membership application. However, only members can access the full range of information services.

WWW

The World Wide Web (WWW or Web) is a part of the Internet, but it is different from the text-oriented services of the Internet because it is much more graphic. On the Web you'll find art, photos, and text—even audio and video clips—housed within colorful organizational locations, or "home pages." It's certainly more entertaining, but additional software and more computer power, or memory, is required to enter the Web.

The Society is planning to create a home page in the next several months. Any visitor to the home page will find information of general interest about the Society and the medical profession, but there will be a "for physicians only" place on the page.

What's ahead?

The Society's Physician Communications Technology Committee sees a number of exciting possibilities in the not-too-distant future: *teleconferencing* for meetings, continuing medical education (CME) distance education classes, and point-to-point desktop communication... *online access* to publications, electronic processing of orders and payments for products and services...and *CD-ROM* as a vehicle for publications distribution, document research, compendium storage, and CME programs—to name a few.

New technology for two-way communication with the Pennsylvania Medical Society is here. For more information, contact the Society's Department of Member Communications at (800) 228-7823 or (717) 558-7750.

The contributing author, Kenneth G. Robinson, is the Society's vice president of communications.

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania and beyond.

This ongoing column updates Pennsylvania physicians on the state of managed care in the commonwealth and nation. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

1 Twenty-nine pediatricians have joined forces to create Pediatrics Alliance, PC, which combines six existing practices in Allegheny, Beaver, Butler, and Washington counties, and claims 80,000 patients. [*Pittsburgh Business Times*]

Seven Pittsburgh hospitals—Children's Hospital of Pittsburgh, Magee-Womens Hospital, Passavant Hospital, South Hills Health System, St. Margaret Memorial Hospital, University of Pittsburgh Medical Center, and Washington Hospital—have formed a nonprofit corporation, Tri-State Health System, to deliver all levels of medical care in the Pittsburgh area. Tri-State expects to join with Blue Cross of Western Pennsylvania and begin operations next summer. The network may also offer a Medicaid HMO.

Tri-State is one of two competing hospital groups in the region. The Southwest Integrated Delivery Network, which consists of five hospitals, including Allegheny General Hospital, is expected to begin operation next spring.

5 Four area hospitals—Holy Spirit Hospital, Camp Hill; Penn State's Milton S. Hershey Medical Center; Carlisle Hospital; and Good Samaritan Hospital, Lebanon—in September unveiled a preferred

provider organization of 900 primary care and specialist physicians. The Alliance 4 Health Network will begin offering coverage on January 1, 1996. Its parent company, Alliance 4 Health, Inc., was unveiled earlier in the month. [*Central Penn Business Journal, Harrisburg*]

6 PhyCor announced plans to acquire the assets of the 213-physician Guthrie Clinic in Sayre. PhyCor will manage the multispecialty clinic on an interim basis until regulatory issues involving Guthrie's tax-exempt status are resolved. PhyCor currently operates 28 clinics with 1,500 physicians and IPAs that include over 4,700 physicians. [*Modern Healthcare*]

8 Home Health Corporation of America, Inc., King of Prussia, in late September filed for an initial public offering of 3.6 million shares of common stock. Proceeds will be used to reduce debt, redeem preferred stock, and finance acquisitions. [*Philadelphia Inquirer*]

U.S. Healthcare, Blue Bell, has announced that it plans to join forces with two insurers—UNUM Corp. and Zenith National Insurance—to provide a single managed care plan that covers health care, workers' compensation, and disability insurance. Initially, the company plans to operate in New Jersey, Pennsylvania, and New York. [*Patriot-News, Harrisburg*]

8 The Prudential Insurance Company of America, Inc., based in Horsham, in late September launched Community Care, an HMO for Medical Assistance

recipients in Philadelphia and surrounding counties. The state Department of Public Welfare approved the venture earlier in the month. [*Philadelphia Business Journal*]

► Blue Cross and Blue Shield of New Jersey has announced that it received approval from Pennsylvania regulators to operate an HMO subsidy, called Medigroup HMO of Pennsylvania, Inc., in southeastern Pennsylvania. The HMO will market insurance to southern New Jersey businesses that have employees commuting from five Pennsylvania counties—an estimated 76,000 people. [*Philadelphia Inquirer*]

Statewide

• Independence Blue Cross and Pennsylvania Blue Shield have unveiled their "mother's option" program that will give members of their PHO and HMO the option of a 24-hour hospital stay with three post-discharge home visits or a 48-hour hospital stay with no home visits. The 48-hour option was not previously available. [*BNA's Managed Care Reporter*]

Facts, Figures, Etc.

• Overall spending on health care in 1994 grew by six percent, the slowest rate in 30 years, according to the Congressional Budget Office (CBO). For 1995, spending is projected to grow by seven percent, reaching 14 percent of gross domestic product, almost \$1 trillion. The CBO attributes the slowdown to managed care and price competition, but cautions that it may not last. [*AMA Electronic Network*]

• HMO premiums across the country are expected to increase an

average of 0.8 percent in 1996. [*Wall Street Journal*]

- A Group Health Association of American survey of 58 group- and staff-model HMOs found that about two-thirds had nurse practitioners (NPs) and physicians assistants (PAs) on staff. Although 70 percent use NPs and/or PAs as primary care providers, only half of those market the options by placing NPs or PAs on provider lists. [*Hospitals and Health Networks*][†]

Managed care moves, state by state

- California Advantage, Inc., the California Medical Association-sponsored managed care organization, has surpassed its target of enrolling 3,000 physicians by July. Almost 3,500 physicians have paid the \$1,000 to join. California Advantage plans to offer a PPO in January. [*Hospitals and Health Networks*][†]

- The Department of Justice has settled antitrust enforcement actions against a Connecticut and a Missouri PHO. Both PHOs are in one-hospital towns; the department alleged that both attempted to insulate themselves from competition by maneuvers such as establishing fee schedules for physician services without sharing risk and referring all potential managed care business to the PHO. The consent decrees restrict the PHOs' anti-competitive activities, but permit them to use a "messenger model" contracting system. The decrees also allow the entities to meet the definition of "qualified managed care plan" if they are non-exclusive, share financial risk, and comprise no more than 30 percent of the physicians in the market. [*BNA's Health Law Reporter; Modern Healthcare*][†]

- Value Health, Inc., announced in September that it planned to cut about 500 jobs, or up to 15 percent of its workforce, and take a charge of about \$80 million to offset pressure on profit margins and slower revenue growth. The Connecticut-based company, which operates specialty managed health care plans, said a shift to lower-margin government business in its managed mental health unit was hurting results. [*New York Times*]

- Sacramento-based Sutter Health and San Francisco-based California Health Systems have announced that they are merging into an integrated system that will include 22 not-for-profit hospitals, over 1,600 affiliated physicians, and numerous outpatient specialty clinics, making it the second largest integrated system in California, trailing only Kaiser Permanente. [*BNA's Managed Care Reporter; Hospitals and Health Networks*][†]

- Texas Children's Hospital, the largest pediatric hospital in the country, plans to launch a pediatrics-only HMO in early 1996. [*BNA's Managed Care Reporter*][†]

- A coalition of New Jersey consumer groups is asking the State Board of Medical Examiners to investigate the legal and ethical implications of managed care contracts that reward physicians for lowering costs. The group is particularly concerned with practices of Blue Cross and Blue Shield of New Jersey, which will administer a new point-of-service plan for state employees. [*BNA's Managed Care Reporter*][†]

TERRESTERIAL CAPITAL CORP. (Practice Management Group)

To: Practitioners

From: Terrestrial Capital Corp.

Terrestrial Capital Corp. (TCC), a wholly owned subsidiary of Terrestrial Capital Holdings, Inc., announces the expansion of its practice management group's financial service operations.

Terrestrial Capital Corp. (TCC) will provide small to medium practitioners flexible account receivable financing in amounts of \$50,000.00 to \$150,000.00 per month, by utilizing third-party accounts as collateral on an ongoing basis.

Cost (1) (2)

rate established as "prime" plus +/- % with funding level based on prior monthly collection history.

Structure

Medicare, Medicaid; Other third-party plans; no self-pay.

- (1) The funding is structured as an ongoing forty-five (45) day transaction.
- (2) The "rate" quoted for the financing will be determined by Terrestrial Capital Funding, Inc.

A low-cost billing and collection service is an integral part of the financing.

It is anticipated that the expanded services provided by Terrestrial Capital Corp. (TCC) will be offered to qualified practitioners beginning in October 1995.

Taming the CAT Fund: Two Decades of Challenges

Kenneth B. Jones, Esq.

The CAT Fund on September 30 announced a 68 percent emergency surcharge to settle approximately \$108 million in unpaid claims. Physicians across the state are asking how—and why—this happened. The Society's general counsel takes an historical look at the fund and offers a realistic solution to curtail similar "surprises" in the future.

The Medical Professional Catastrophe Loss Fund (CAT Fund) and the Pennsylvania Medical Society have had an uneasy history. The Society has sued the fund twice—once over the mandatory fund participation requirements, and once over the calculation of the surcharge. The Society has also supported legislative initiatives that will seriously limit the fund's operations. At the same time, the Society has declined to participate in two other legal challenges to the CAT Fund and has opposed legislative proposals to eliminate the fund entirely.

Creation from crisis

The Pennsylvania legislature created the CAT Fund in response to the professional liability crisis of the early 1970s.

At that time, a leading malpractice underwriter in Pennsylvania was the Argonaut Insurance Company. In the three-year period prior to 1974, Argonaut sought and obtained premium increases of approximately 200 percent. Argonaut subsequently decided to cease writing professional liability insurance in Pennsylvania; that decision precipitated a crisis.

Argonaut and others pointed to two factors that made insuring professional liability difficult. The first was the length of time between collection of the premium and payment of the claim. For example, under a typical occurrence policy, the insurance company would collect a premium in 1970 to cover occurrences or incidents of malpractice in 1970. On average, these occurrences or incidents would mature into claims and ultimately settlements or awards some six to eight years later. That made the calculation of a premium in 1970 difficult, because actuaries had to deter-

mine what the pay-outs would be eight years or more in the future.

While the statute of limitations is two years for malpractice actions, the two years begins to run only on the *discovery* of the injury and the cause thereof. The statute of limitations is met when a complaint is filed. The court process itself can be lengthy. While six to eight years may be the average, 18 to 20 years may pass before all claims are settled.

The second factor was the possibility of a series of catastrophic claims against one of Pennsylvania's comparatively small insurance carriers. Although the possibility was remote, the concern was that such an occurrence could render a company insolvent.

Act 111 of 1975, which created the CAT Fund, responded to those issues.¹ It addressed the long tail between the occurrence of the incident and the ultimate payment in Section 605 by providing that claims filed more than four years after the incident would be handled by the fund.

The fund also eliminated the actuarial calculation from the equation by providing a "pay-as-you-go" system. Traditionally, an insurance company issues a policy, collects a premium, and provides coverage for that year. The money would be placed in reserves and paid out perhaps eight years later.

The CAT Fund operates on a "pay-as-you-go" system by collecting an amount equal to its costs—claims paid and administrative expenses from the previous year—plus a \$15 million buffer at the beginning of each year. If the amount collected was not enough to pay that year's claims, the fund may assess an emergency surcharge. If the amount collected was more than needed to pay claims, the excess goes to reduce the surcharge for the next year.

Act 111 also addressed the possibility of a series of catastrophic losses by limiting the basic insurance carriers' exposure to the first \$200,000 of coverage. The CAT Fund provides the next million dollars in coverage, thus spreading the risk of a catastrophic verdict among all the carriers.

Shortly after the passage of Act 111, the State Society challenged the mandatory insurance requirement in the Commonwealth Court. That court upheld the mandatory insurance requirement,² and

Mr. Jones is the Society's general counsel.

the Pennsylvania Supreme Court declined to hear an appeal.

The 1987 House of Delegates debate

The 1987 House of Delegates considered a resolution calling for a legal challenge to mandatory participation in the CAT Fund. The House rejected the resolution, in part because the likelihood of a successful challenge was remote, and because success would require paying off the fund's unfunded liability. The legal challenge was brought in the federal courts by physicians not associated with the Society and was unsuccessful.³

Society challenges 1988 calculation

The Society had long interpreted Act 111 as requiring that any surplus remaining at the end of each year would be applied to reduce the surcharge for the next year. In calculating the 1988 surcharge, the CAT Fund, supported at the time by the state insurance commissioner, declined to make the reduction despite Society protests.

The Society brought suit near the end of October 1987 when the surcharge was formally announced, and by Christmas had received a favorable Commonwealth Court decision. That decision required the surcharge to be determined according to a mathematical formula based on previous years' costs and foreclosed the fund's attempts to increase the surcharge beyond the amount statutorily allowed. Since that time, the Society has met annually with CAT Fund representatives to review the surcharge and assure the calculation is made according to statute.

A resolution before the 1994 House of Delegates requested Society support for litigation challenging CAT Fund surcharges subsequent to the Society's 1988 challenge. Essentially, that litigation agrees that the Society correctly challenged the 1988 surcharge, but that the Society should have challenged on the same basis in subsequent years. The House referred the resolution to the Board of Trustees, which recommended to the 1995 House that the Society not participate.

The 1994 and 1995 crisis

In 1994 and 1995, it became clear that the CAT Fund faced a funding shortfall. The problem arose in part because of: 1) the "day-backward" program in Philadelphia which, in an attempt to clear its backlog, compressed what would have been several years of verdicts and settlements into a single year; and 2) premium discounting by the basic carriers, which left the fund with less money than anticipated.

The fund proposed increasing the basic limits from \$200,000 to \$400,000. The Society opposed the increase on the grounds that it would increase costs by 25 percent, but not provide additional coverage or solve the funding problem. The Hospital Association of Pennsylvania (HAP) proposed abolishing the fund entirely, believing that the fund—fearing an emergency surcharge—was not settling cases as quickly as it should, resulting in unnecessary litigation stress, increased costs, and bad publicity.

The State Society opposed abolishing the fund because it would cost at least \$1.9 billion to retire the unfunded liability. Instead the Society proposed:

- 1) a twice-a-year surcharge based on average, filed, approved premiums, so the fund will have adequate money; and
- 2) basic carriers handling all stages of the claims.

HAP was supportive and drafted initial language. The trial lawyers offered no objection. A bill was drafted and introduced as Senate Bill 1122, but the Senate adjourned for the summer without taking action.

On July 1, a new CAT Fund administrator, John H. Reed, JD, was appointed, who attempted to address the criticism of fund claims handling. On September 30, he announced a 1995 emergency surcharge of 68 percent. The 1996 surcharge is anticipated to be roughly 164 percent.

A realistic solution

Tort reform is the only realistic solution to increasing CAT Fund surcharges. A tort reform bill sponsored by Representative J. Scot Chadwick (R-Bradford) and supported by the Society:

- prevents a claimant from collecting duplicate benefits,
- places reasonable limits on punitive damages,
- protects physicians against personal liability for excess verdicts,
- empowers the courts to sanction attorneys who file frivolous lawsuits,
- requires awards that exceed \$200,000 to be paid in periodic installments, and
- requires "expert" witnesses to be actively engaged in direct patient care in the same medical subject area.

At press time, the Society and Representative Chadwick were busy planning a "rally" to unveil the important legislation. Look for coverage on page 4, in the *Executive Report* insert, and next month in PENNSYLVANIA MEDICINE. Also, for commentary on tort reform and the CAT Fund, see pages 6 and 8. ☺

1. The legislation creating the fund also contained tort reform provisions, including arbitration panels. The Pennsylvania Supreme Court found the arbitration panels unconstitutional since they unduly delayed access to a jury trial, *Mattos v. Thompson*, 421 A 2d 190 (Pa. 1980). In a subsequent case, the Supreme Court struck down all arbitration procedures—collateral source rule, limitations on attorneys' fees, etc.—as simply part of the unconstitutional arbitration system, *Heller v. Frankston*, 475 A 2d 1291 (Pa. 1984).
2. *McCoy v. Com., Bd. of Medical Ed. and Licensure*, 391 A 2d 723 (Pa. Cmwlth 1978).

MEDICARE Q&A

SEPARATE PAYMENT FOR CARE PLAN OVERSIGHT

Effective January 1, 1995, the Health Care Financing Administration (HCFA) allows separate payment to physicians for providing Medicare care plan oversight services if *all* of the following conditions are met:

- The services are furnished to beneficiaries receiving Medicare-covered home health and hospice services.
- The physician has furnished a service requiring face-to-face encounter with the patient in the six months before the first billing for the service.
- The physician does not have a significant financial relationship with the home health agency, is not the medical director or employee of the hospice, and does not provide services under an arrangement with the hospice.

Based on these conditions being satisfied, HCFA has instructed Medicare carriers to allow payment:

- 1) to one physician per month for recurrent physician oversight supervision of therapy involving 30 or more minutes of the physician's time per month;
- 2) for care plan oversight to a physician providing post-surgical care during the post-operative period, only if the care plan oversight is documented to be unrelated to the surgery;
- 3) during the 30 days following discharge, provided the other conditions for payment are met; and
- 4) under CPT code 99375 in accordance with the above rules. For Medicare purposes, CPT code 99375 refers only to the services furnished to beneficiaries receiving Medicare-covered home health and hospice services requiring 30 or more minutes per month. Medicare will not make additional payment for services beyond 60 minutes and will consider CPT code 99376 bundled for Medicare purposes.

The State Society has received numerous telephone calls from members with questions regarding the billing for these services. As now structured, the guidelines will not permit a physician to bill Medicare for care plan oversight services in many instances. To assist physicians in correctly determining these situations, Xact Medicare Services,

Pennsylvania's Medicare carrier, published an article in the September 1995 issue of "Medicare Report," containing the most frequently asked questions they have received. This is an excerpt of that article.

Q: Can a physician other than the physician who signed the plan of care (i.e., attending physician) bill for care plan oversight?

A: The physician who bills for care plan oversight must be the same physician who signs the plan of care.

Q: Under what conditions can the medical director of a home health agency sign the plan of care for a Medicare beneficiary?

A: Physicians may sign the plan of care for a home health agency if they do not have significant ownership in or a significant financial relationship with the home health agency.

Significant ownership is defined as having direct or indirect ownership interest of five percent or more in the capital, stock, or profit of the home health agency; and having an ownership interest of five percent or more in any mortgage, deed of trust, note, or other obligation that is secured by the agency, if that interest equals five percent or more of the agency's assets.

Significant financial or contractual relationship is defined as receiving any compensation as an officer or director (i.e., board of directors) of the home health agency; and having direct or indirect business transactions with the home health agency that, in any year, amount to more than \$25,000 or five percent of the agency's total operating expenses, agreements, purchase orders, or leases to obtain services, supplies, equipment, and space.

Q: Can a volunteer medical director of a hospice bill for care plan oversight?

A: No. According to Section 418.3 of the Code of Federal Regulations (CFR), a volunteer within a hospice is considered an employee of the hospice. Payments to the hospice already include payment for services of the *hospice physicians* in establishing and overseeing the plans of care. Separate Part B payments are limited to physicians who are not affiliated with the hospice (see CFR 418.304). Thus, the volunteer medical director is considered an employee of

the hospice and cannot bill separately for care plan oversight under the physician fee schedule.

Q: Can a carrier determine care plan oversight not medically necessary although the Regional Home Health Intermediary (RHHI) has approved payment for either home health or hospice care?

A: Although the RHHI has approved payment for either home health or hospice care, this does not automatically mean that payment for care plan oversight is warranted. As for all services paid for by Medicare, the care plan oversight services must be medically necessary. Further, for those care plan oversight services for which Medicare will recognize separate payment, the patient must require complex or multi-disciplinary care modalities involving regular physician development and/or revision of care plans, review of subsequent reports of patient status, or review of related laboratory and/or other studies. Participation of a beneficiary in covered home health or hospice care does not alone qualify the beneficiary's physician for separate payment for care plan oversight.

Q: If a group of physicians are members of a group practice in which one of the members has either significant ownership or financial interest in a home health agency, can the other physicians in the group practice sign the plan of care and bill for care plan oversight?

A: Yes. If the group itself has no ownership interest in the home health agency, the other members of the group can sign the plan of care and be paid for care plan oversight services.

Q: Will the carrier pay for care plan oversight for a hospice patient who resides in a skilled nursing facility (SNF)?

A: Under normal circumstances, Medicare does not pay for both SNF care and hospice care. However, if the hospice beneficiary is in the SNF receiving respite or general inpatient care under the hospice benefit, or is a duly entitled beneficiary, or is a private paying resident, Medicare will pay for care plan oversight related to the *hospice* services if all other conditions for payment are met. The

attending physician cannot be an employee of the hospice. Care plan oversight is included in the prospective rate of the hospice if the physician is an employee of the hospice. Medicare will pay for care plan oversight services if the attending physician is not an employee of the hospice, the care plan oversight services are documented to be related to the hospice plan of care, and the duration of time spent by the attending physician overseeing the hospice plan of care during the month is 30 minutes or more.

Q: Can a home health agency's records serve as documentation of the physician's care plan oversight activities?

A: No. Medicare requires that the physician who furnishes the services document which services were furnished, and the date and length of time associated with those services.

Q: Can care plan oversight be reported and paid when furnished by nurse practitioners and physician assistants?

A: No. Section 1861(m) of the act provides coverage of home health services where those services are furnished under a plan of care established and periodically reviewed by a physician. Further, sections 1814(a)(2)(c) and 1835(a)(2)(A) of the act require physicians to certify the need for home health services. Thus, physicians are required by current law to perform certain functions (such as signing the plan of care) and, therefore, only physicians may be paid for care plan oversight.

Q: Can the attending physician's time spent discussing, with his/her nurse, conversations his/her nurse had with the home health agency count toward the 30-minute requirement?

A: No. Such time spent with his/her nurse does not count toward the 30-minute threshold. However, the time spent by the physician working on the care plan, after the nurse has conveyed the pertinent information to the physician, is countable toward the 30 minutes.

Q: Can the time another physician spends working on the patient's care with the attending physician who actually signed the care plan

be counted toward the 30-minute requirement?

A: No. Only the time the attending physician spends on care plan oversight is countable. The time spent by other physicians is not countable toward the 30-minute requirement. Payment for care plan oversight is for the time spent by one physician (i.e., the physician providing the service).

Also do not count: physician and staff time spent getting or filing charts, or calling patients, their family members, home health agencies, or pharmacists for prescriptions; travel time; time spent preparing claims; low-intensity services included as part of other evaluation and management services; and informal consults with health professionals not involved in the patient's care.

Q: Why does HCFA require the physician billing for care plan oversight services to have seen the patient at least once in the six months prior to the first billing for care plan oversight?

A: HCFA believes that the medical management of patients with complex health care needs should be linked with a face-to-face evaluation of the patient. HCFA does not believe it is unreasonable to specify that a physician be required to see a patient within the six months prior to the initial billing for care plan oversight.

Q: Do physicians need to see their patient every six months to bill for care plan oversight?

A: No. Physicians are *not required* to see beneficiaries at regular six-month intervals after the initial encounter six months prior to the first billing of care plan oversight.

Q: Will HCFA permit payment for care plan oversight services during the same month that a physician bills for hospital discharge day management?

A: Yes. Payment will be allowed for care plan oversight services for patients receiving covered home health and hospice services during the month following hospital discharge, if the other conditions for payment are met.

Q: What site of service should be indicated on the claim form for care plan oversight?

A: The physician should indicate the location where the majority of the

services were furnished. Since care plan oversight is not necessarily a face-to-face service, and the physician is likely to perform countable activities in the office setting, the site of service is likely to be the physician's office. However, if the majority of time spent on care plan oversight activities is at a site other than the physician's office, that other site of service should be identified.

Q: Does the physician need to send in his/her documentation requirements when submitting billing for care plan oversight?

A: No. The documentation requirements are to be kept by the physician unless requested by the Medicare carrier.

Q: Can rural health clinic (RHC) physicians receive a separate payment for care plan oversight services?

A: No. Rural health clinic physicians do not receive separate payments for services provided to RHC patients at the rural health clinic or other medical facilities. Medicare pays the clinic for RHC services provided to Medicare patients.

RHC services include physicians' services, and the clinic is paid only on a per-visit basis for the face-to-face encounters the physician may have with the Medicare patient. If the RHC incurs any additional costs as a result of the physician providing this service (in addition to the compensation paid by the RHC to the physician), the clinic may include the cost in its cost report to determine its all-inclusive payment rate.

Q: Will Medicare pay for overseeing the care of a patient who is not receiving Medicare-covered home health or hospice benefits?

A: No. Medicare will pay separately for care plan oversight services only for patients who receive Medicare-covered home health or hospice benefits.

Q: If Medicare will not pay for overseeing the care of a patient who does not receive Medicare-covered home health or hospice benefits, can the physician charge the beneficiary for those services?

A: No. This service is covered, and payment is bundled into the payment for other visits and procedures.

UNDERSTANDING, TREATING CRYPTOSPORIDIOSIS

The Pennsylvania Department of Health has provided this series of questions and answers on Cryptosporidiosis for health care providers' information.

Q: What is Cryptosporidiosis?

A: Cryptosporidiosis is a disease caused by a single-celled intestinal protozoan and is spread by the consumption of oocysts. Each oocyst is an encapsulated zygote. Although infection is usually asymptomatic, it may cause diarrhea, nausea, vomiting, fever, abdominal cramps, and severe weight loss.

Q: How do you become infected?

A: A person is infected by consuming viable *Cryptosporidia* oocysts. Animal or human feces are the principle sources of oocysts. Oocysts can be spread either directly on contaminated objects, or indirectly via contaminated food or water. According to two national studies, oocysts were present in 55 percent of raw (untreated) surface water sources and in 27 percent of finished (treated) community drinking water samples taken. Nationally, the vast majority of reported cases have been linked to waterborne outbreaks.

Q: Who is at risk of becoming ill with Cryptosporidiosis?

A: Cryptosporidiosis can be a cause of mild disease in healthy adults, serious disease in the elderly, very severe disease in infants, and fatal disease in immunocompromised (HIV/AIDS) or immunosuppressed (cancer chemotherapy or organ transplant) patients. Immunocompromised and immunosuppressed patients are at greater risk of becoming chronically ill if exposed to infective *Cryptosporidia* oocysts.

Q: How infective is Cryptosporidiosis?

A: Even though the minimum number of oocysts necessary to infect a human is unknown, at-risk citizens should exercise great care since animal studies have shown one oocyst can be infective. One recent human study demonstrated that consumption of 30 oocysts caused disease in 50 percent of the healthy volunteers. This result, when coupled to the apparent absence of clinical disease in healthy persons who have recently seroconverted, seems to suggest that

citizens are naturally exposed to much smaller infective doses.

Q: Can Cryptosporidiosis be successfully treated?

A: Healthy adults who become infected usually recover in 48 hours to a few weeks without treatment. Infants tend to have more severe illness. They may need to be hospitalized and have rehydration therapy. Immunocompromised or immunosuppressed patients may not be able to recover from the disease. They may experience dramatic cholera-like symptoms which last for months and can result in death. Medications used to combat the disease have had only limited success.

Q: When was Cryptosporidiosis identified by federal agencies as a public health problem?

A: Federal agencies became concerned in the spring of 1993 when approximately 400,000 residents of Milwaukee, Wisconsin, became ill due to waterborne *Cryptosporidiosis*. Approximately 100 people died.

A combination of circumstances contributed to the Milwaukee outbreak. At one of Milwaukee's two water treatment plants, the routine method of water treatment was changed, and a different coagulant (a chemical added to remove small particulate) was used. Operators at the plant were less familiar with this coagulant and had difficulty obtaining proper treatment. Further, unusually heavy rains in the area had fallen on frozen ground and carried large numbers of *Cryptosporidia* oocysts into Lake Michigan.

It is significant that before and during this outbreak, all federal drinking water quality standards were met. This fact has led to a reevaluation of federal standards for water treatment plants.

Q: Has a large Cryptosporidiosis outbreak ever been identified in Pennsylvania?

A: In August 1991, 1,987 persons attended picnics at a recreational area located in Berks County. Of those, 551 (28 percent) admitted to some gastrointestinal illness within nine days of attending the picnics. Investigation suggested a common source of exposure. All submitted stool specimens were negative for bacterial pathogens and giardia; however, six were found to be positive for *Cryptosporidia* oocysts.

Oocysts were also identified in the recreational area's well water. The contaminated well was abandoned.

Q: What does the Department of Health (DOH) recommend?

A: Because a vast majority of reported *Cryptosporidiosis* cases have been epidemiologically linked to waterborne outbreaks, and because oocyst contamination in drinking water is very difficult to assess and manage, DOH recommends that all immunocompromised or immunosuppressed patients who wish to further reduce their risk of *Cryptosporidiosis* infection do the following:

- Boil all drinking water. Water should be brought to a vigorous, rolling boil for one minute.
- Boil all water intended for washing food (fruits and vegetables), brushing teeth, making ice cubes, and diluting fruit juice.
- Only use "point-of-use" filters or water treatment devices which remove *Cryptosporidium* oocysts, e.g., certified for "cyst reduction" or capable of removing particles down to one micron in size. Individuals may request a list of certified water treatment devices by calling National Sanitation Foundation International at (800) NSF-8010.
- Avoid drinking all tap water, including fountain drinks and beverages in restaurants and other public facilities. Ice cubes made from tap water should also be avoided.
- Ensure that all dishes, silverware, pots, and pans washed with tap water are dry before they are used for food preparation and/or consumption. Complete drying removes potentially contaminated water.
- Avoid swallowing water from lakes, pools, and rivers while swimming.

DOH further advises that any sexual practice that brings a person into oral contact with feces is a high-risk factor for exposure to infective oocysts and should be discontinued.

Lastly, DOH recommends that all citizens practice good personal hygiene, since proper hand washing—after using the toilet, handling animals, changing diapers, or other feces contamination, and before food preparation and consumption—remains the most effective means for prevention of numerous bacterial, parasitic, and viral diseases that can cause serious and possibly fatal disease.

Statement of Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. The Medical College of Pennsylvania and Hahnemann University designates 1.0 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association for each hour of attendance at these continuing medical education activities.

This program is eligible for 1.0 credit hour for each hour of attendance in Category 2A of the American Osteopathic Association.

"Fam-Med": An Internet List for Small Practices

Fred D. Baldwin

A small-town family physician, fearing that colleagues in solo and small practices might be ignored by organizations developing new computer applications in medicine, created Fam-Med, an Internet computer information clearinghouse for doctors who practice family medicine. This installment of our series on computers and medicine describes Fam-Med and how to reach it.

Paul Kleeberg, MD, recalls, "I was using my Macintosh one day when a puff of black smoke came out the back and the screen went blank. My heart sank. As soon as you take it any place, they say, 'Ah, you need a new motherboard.' I envisioned them replacing the entire guts, costing me several hundred dollars."

Using another modem-equipped computer, Dr. Kleeberg consulted a Macintosh user group on the Internet. "In my best resident form, I presented the case, saying the patient was in its usual state of health until, all of a sudden, the screen had lines going this way, and that it made this kind of sound, and so on. Within a matter of hours, several people had replied, telling me the part that had failed, an 800 number I could call to get it Federal Expressed to me the next day for \$60, and the tools and the steps I'd need to replace it. I did it, and it worked."

"For me," Dr. Kleeberg concludes, "that was one of the proofs that the Net has tremendous power to help people. And that was over six years ago, before the Internet became widely known. As we get a critical mass of physicians on board, I think we're going to see very similar things happen in health care."

During the past five years, Dr. Kleeberg has done quite a bit to bring that critical mass together. He's the developer of Fam-Med, an Internet e-mail discussion list that focuses on uses of computer and telecommunication technology in the teaching and practice of family medicine. Fam-Med is maintained on the computer

system of Gustavus Adolphus College, St. Peter, Minnesota, but Dr. Kleeberg is not an academician. He's part of a nine-member, largely rural, family practice with clinics in St. Peter (population 9,000) and Le Center (population 1,300).

He bought his first computer, the Macintosh already mentioned, soon after he entered medical school at Stanford University in 1984. Later, he became active in the American Academy of Family Physicians and urged that group to establish an Internet list—unsuccessfully, since the academy had already experienced some false starts of that kind. So, he did it himself.

"I wanted to create a mechanism for physicians working with computers to communicate about what they were doing," he says, "to build a virtual community of individuals trying to automate their offices. One of the driving forces for me was that if family physicians didn't do it, large medical centers and large universities were likely to do it for us. The systems that we would then be required to use might fill the needs of the multispecialty or referral center, but not the needs of the rural physician."

Fam-Med went online in November 1990. Like any Internet "list," Fam-Med provides a forum for message exchange that requires no more technical resources than the ability to send e-mail. You can get Fam-Med postings in either of two formats: an unmoderated (all messages as soon as they are received) list and a moderated digest, which collects in one batch messages on the full list, minus irrelevant notes.

To join the unmoderated list, send an e-mail message to listproc@GAC.edu with the body of the text reading: *subscribe fam-med [your name, but without these brackets]*. For the digest, which usually appears twice a week, send your e-mail message to listproc@apollo.GAC.edu, reading: *subscribe fam-med-digest [your name without brackets]*. To get off a list, replace "subscribe" with "unsubscribe." Alternatively, simply contact Dr. Kleeberg at Paul@GAC.edu.

Mr. Baldwin, a regular contributor from Carlisle, is coauthor of *Infomedicine: A Consumer's Guide to the Latest Medical Research*, scheduled for publication by Little, Brown & Co. in March 1996.

STATE SOCIETY'S FIGHT FOR MEDICAL LIABILITY TORT REFORM HEATS UP

Pennsylvania physicians are writing letters and contacting their legislators to urge support of the State Society's recently introduced medical liability tort reform bill.

News of the huge CAT Fund emergency surcharge on September 30 widened the window of opportunity for the State Society's tort reform legislation, House Bill 2122, introduced October 18 by Rep. J. Scot Chadwick (R-Bradford).

Pennsylvania physicians have intensified the pressure on their legislators; media across the state are publicizing physicians' cries for attention to the state's glaring problems and inequities in medical liability; and the public is witnessing physicians' frustrations and unrest.

Tell your legislators that:

- ✓ Under the current system, it can take eight years and more for patients to receive their awards.
- ✓ Our current system hands 53 cents out of every liability dollar to lawyers and administrators—less than half goes to patients.
- ✓ Pennsylvania physicians—already pressed by the 1995 premium at 102 percent of primary coverage—now face a 68 percent emergency surcharge due by year's end. And, most doctors will pay it all over again in January 1996!
- ✓ Unless this commonwealth takes steps to pass meaningful medical malpractice tort reform, the problem will only become worse—for all patients, as well as all physicians.
- ✓ Your legislator should support HB 2122, introduced by Rep. Chadwick.

PRESS CONFERENCE SPOTLIGHTS URGENT NEED FOR TORT REFORM

Pennsylvania physicians demanded comprehensive medical liability tort reform on October 26, during a press conference at the Capitol sponsored by the State Society. "Our hope...is to document the need for liability reform and to demonstrate a solidarity within the medical community in seeking such reform," State Society President John H. Hobart, MD, told specialty, county, and other physician leaders in a letter inviting them to join in the press conference.

The Society's reform proposal, as contained in the bill sponsored by Rep. Chadwick, (HB 2122) includes the following key elements:

- ✱ *Informed consent*—requires physicians to obtain informed consent prior to a "major invasive procedure" except in emergency situations or where the court deems appropriate.
- ✱ *Collateral sources*—court could deduct any public or group benefits received or to be received by the claimant, unless certain circumstances apply.
- ✱ *Punitive damages*—places reasonable limits—not more than 200 percent of compensatory damages—on punitive awards and protects physicians' confidentiality with respect to assets.
- ✱ *Statute of limitations*—claims must be filed within two years of discovery or four years from the act which caused the injury, whichever is earlier.

NEW LOOKS IN WORKS

As we work toward re-designing the Society's publications and information systems in the next few months, you'll see changes in the way you receive *Executive Report*.

Until our new publication debuts in spring 1996, *Executive Report* will be merged with *PENNSYLVANIA MEDICINE*, as it is this month.

Readership studies are still underway—although you may not have been asked to complete a survey, we want to know your thoughts on how/when/what information you need from your State Society. Write to the editors, *PENNSYLVANIA MEDICINE*, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

- ✱ *Periodic payment of future damages*—future damages which exceed \$200,000 would be paid in periodic or installment payments.
- ✱ *Frivolous lawsuits*—empowers courts to sanction attorneys who file frivolous lawsuits.
- ✱ *Pre-treatment agreement to arbitrate*—sets up safeguards to assure that patients are not coerced to sign such agreements and allows them to reconsider after receiving treatment.
- ✱ *Expansion of coverage*—redefines professional liability insurance coverage and other changes.
- ✱ *Risk management*—mandates that insurers develop approved risk management programs.

PPHP EXTENDS DEADLINE FOR STOCK OFFERING

The board of directors of the Pennsylvania Physician Healthcare Plan, Inc. (PPHP) has announced that, due to the level of physician interest in the stock offering, the deadline for subscriptions has been extended to November 30, 1995.

"Pennsylvania physicians are demonstrating their commitment to their patients and to quality medicine through their response to the offering," said Gary Brown, MD, chairman and president of PPHP. "We are very encouraged and don't want to see any interested physicians get left behind." The announcement was made formally through a mailing to all practicing Pennsylvania physicians on October 19.

At its March meeting, the State Society Board of Trustees issued a statement that the Society "fully supports and endorses the goals" of PPHP. The board further states that, "Any investment decision is a matter to be decided by physicians individually, with the advice of their consultants, upon a careful review of a prospectus. We believe that participation in PPHP should be considered by our membership."

The Pennsylvania Medical Society Liability Insurance Company (PMSLIC), through its subsidiary, Infinity Management Services, has provided administrative and other services during PPHP's capitalization phase. For more information about investing in PPHP, or for additional copies of the stock offering materials, contact PPHP at (800) 556-8390.

Pennsylvania Coalition Against Domestic Violence; and other local leaders of programs attacking violence.

Keystones of Public Health is the Trust's broad-based coalition—including businesses, nonprofit organizations, and government—interested in improving the public health of Pennsylvanians.

STATE SOCIETY MEMBERS CAN RECEIVE DISCOUNT ON DISABILITY POLICY

Members now eligible for 15 percent discount.

The State Society recently endorsed Paul Revere Life Insurance Company as the carrier for the Society's non-cancelable disability program. Society members are now eligible for a 15 percent premium discount on the policy.

Paul Revere has an A (excellent) rating with AM Best and is considered one of the top insurance companies for quality disability products, and the leading writer of non-cancelable disability insurance in the country. The "non-cancelable" provision means that the insurance company can never change the benefits or raise the premium of the policy and is considered the "top of the line" of all disability plans.

The policy is marketed exclusively through Colburn-Bertholon-Rowland (CBR), the endorsed broker for the Pennsylvania Medical Society. For more information, contact CBR's Vice President of Corporate Planning, Douglas W. Kreitzberg at (800) COLBURN (265-2876).

Legislative Update

HOUSE BILL 462: SELF REFERRAL

This bill is now in the House Appropriations Committee, where the cost of enforcing the proposal is being studied. Earlier this year, the House Professional Licensure Committee approved the bill, limiting self referrals with an amendment requested by the State Society. The Society amendment brings the bill into conformity with AMA and Society positions by providing exemptions for underserved areas with a documented need and making other needed revisions.

HOUSE BILL 335: CON ROUNDTABLE MEETINGS

Following public hearings and a roundtable discussion on this proposal to repeal the state's Certificate of Need (CON) law, the Society provided written suggestions for amendments. The Society supports passage of House Bill 335 and the new bill sponsored by Senator Greenleaf (R-Montgomery), Senate Bill 1195, to terminate the CON process. The Society's amendments suggest that services provided through a physician's office or ambulatory surgical facility be exempted from the CON process.

HOUSE BILL 1578: HEPATITIS B PREVENTION ACT

The House passed this bill directing the Department of Health to establish a statewide program for the prevention of Hepatitis B through immunization of children. The immunization would be required for entry into school. Senate consideration is pending this fall.

Currently, Fam-Med has over 750 subscribers, more than half of whom subscribe to the unmoderated list. The majority are either physicians in family practice or those who teach family medicine. The list includes some people with related interests, such as medical software developers.

Dr. Kleeberg says that he has maintained a low profile for Fam-Med except among physicians. The member directory available online includes the names of only about 115 subscribers who have agreed to be listed; Dr. Kleeberg preserves the anonymity of the other 600-plus members to protect them from "spamming" (Internet jargon for "canned" messages—i.e., electronic junk mail).

If you have Internet access, you can explore and download groups of older messages, organized by keywords by use of anonymous FTP (for "file transfer protocol," an Internet tool for exploring and retrieving files). You can also connect to Fam-Med using a gopher server (a tool for digging through electronic tables of contents) or the World Wide Web (a tool that links widely scattered files via hypertext, which you might think of as a cross-index on steroids). You get the necessary addresses and instructions for making these connections when you subscribe to Fam-Med.

A review of Fam-Med postings suggests that its participants use it mainly as a clearinghouse for notes on specialized sources of information—both computer related and clinical. For example, there are discussions of the merits of software, guidance to locating business-oriented sites on the Internet, and comments on databases containing information on drug side effects.

Dr. Kleeberg emphasizes that Fam-Med itself offers almost nothing by way of clinical information, although it does provide an electronic gateway to a few of the more comprehensive Internet resources that do. One is the Black Bag, maintained by Edward Del Grosso, MD, a Pennsylvania physician. (See "Opening Dr. Del Grosso's 'Black Bag,'" March 1995.)

Although Dr. Kleeberg wants to make use of computers easier, he's hardly a red-hot techno-evangelist. "Participating in discussion groups takes time," he says. "It's still easier for me to pick up the phone and call a consultant and say, 'What do you think?' than it is for me to enter the patient's entire chart in the computer. But as our records become automated, it will be easy for me to copy pieces of the record and send it. When the problem is some-

"The kind of practice we need most in this country is the physician who is able to operate independently with state-of-the-art data."

—Paul Kleeberg, MD

thing rare, we'll find that method of communication used more often."

As recently as three years back, Dr. Kleeberg gave a speech to the effect that there were hardly any compelling reasons for most physicians to spend the time and money necessary to become telecomputer literate. Few doctors, he suggested, had changed the treatment of a patient based on something read on an Internet discussion list. Today he modifies that judgment.

"When I wrote that," he says, "there wasn't a critical mass of physicians able to discuss unusual cases. Now, there is a growing number of physicians using electronic communications. There is, for example, an ob/gyn group that has very powerful discussions. As that critical mass increases, we'll see the true value of this network."

That's a plausible vision since it's almost axiomatic among communications specialists that the value of a network increases exponentially with the number of people potentially reachable. A telephone system with one subscriber is useless; one with a few, only a bit better; one with millions, invaluable. (The downside is that being part of a network also means more unwanted calls.)

Dr. Kleeberg thinks the growth of managed care will lead to greater reliance on family physicians. "We can cover more things in one visit because we're not so specialized, and as long as we're practicing according to generally accepted standards, we'll be providing good care. Managed care institutions will want to make sure that we have the best information at our fingertips because it'll reduce the cost of care, reduce liability, and improve the outcomes to patients."

"The kind of practice we need most in this country is the physician who is able to operate independently with state-of-the-art data. In rural America—and it could be in inner cities—physicians operating alone can benefit from information technology to help them give good care." He adds, "They need it to become more efficient, to provide just-in-time learning, and to provide more current information than that found in the dusty old textbooks we all have left over from medical school." ◊

Becoming an Advocate for the Elderly

Maureen Hoepfer

The Pennsylvania Department of Aging reports that as many as one in 20 older adults may be victims of abuse. In this article, John M. Prendergast, MD, MPH, medical director of the Center for Aging at Mercy Hospital, Pittsburgh, discusses what he considers to be the most prevalent form of abuse—passive neglect. He considers it a problem about which all physicians should be better educated.

In recent years, elder abuse has been the target of several public and professional education campaigns. These campaigns, sponsored by the Pennsylvania Department of Aging, the American Association of Retired Persons, The Educational and Scientific Trust of the State Society, and other interested groups, have sought to increase awareness of the different types of abuse—physical, psychological, sexual, and financial—inflicted on older adults, how to recognize abuse, and how to report it. John M. Prendergast, MD, MPH, says that increasing awareness of the problem is necessary, but he emphasizes that people need to understand that much of the abuse inflicted on older adults is unintentional.

"I probably see more cases of passive abuse than active abuse. It happens in the best of families and the worst of families," Dr. Prendergast says. "What we are seeing is a very, very busy generation, with multiple responsibilities, who are trying to juggle work responsibilities, raising young children, and caring for aging parents. This scenario lends itself to producing harried adults who are trying to be all things to all people. Of course, this isn't possible, and it's the older parent who often suffers."

Passive abuse

By passive abuse, Dr. Prendergast means that many caregivers do not understand the aging process and thus neglect to fulfill some of the older adult's needs. For example, the older adult may not be fed adequately, resulting in dehydration or malnutrition. Or, the older adult will re-

main in bed all day without any movement and may develop decubitus ulcers which cost thousands of dollars to treat.

"Passive abuse essentially means not understanding that you cannot go out and leave a demented, incontinent, and confused person alone for three or four hours a day, or alone in an apartment overnight, without significant consequences. Often, I use the analogy that you would not leave your preschooler home alone while you went shopping or ran errands, but you would leave your mother whose mental capacity may be comparable to a four-year-old."

According to the geriatrician, lack of understanding about aging is often coupled with inadequate community resources. In most communities, he says, there is dire need for more adult day care programs, transportation services, health professionals who work with and understand the social problems presented by aging, and respite services for caregivers.

"I'm particularly concerned about the paucity of community resources for older adults across the state. Then I hear, for example, that the legislators want to cut \$270 billion out of the Medicare budget. This worries me even more because I see first hand the dilemmas we are already facing with our aging population. How will we cope with even bigger cuts?" he asks.

A rude awakening

Dr. Prendergast became interested in the problems of caring for the elderly when chief resident in the mid-'70s at St. Vincent's Hospital, Worcester, Massachusetts. He and several colleagues were asked to set up a geriatric clinic in a neighborhood community center. "I had been taught all the principles of physiology and pharmacology, and believed you could solve all problems when you had access to the many resources of a modern acute care hospital. I received a rude awakening," he says.

"Now I was in the community, and I found that my prescription pad was not as potent as it had been in the hospital. There

Ms. Hoepfer is a marketing associate for the Society's Educational and Scientific Trust. This article is one of a series, begun in January 1993 and ongoing through 1995, sponsored by Keystones of Public Health, the Trust's endeavor to address public health needs.

were no prescriptions for loneliness. I had no prescription for helping individuals get groceries during the cold Massachusetts winters. There were no prescriptions that would cure the horrible community-based geriatric health care system we were facing, despite the fact that our hospital offered an excellent system of acute inpatient care. That was 20 years ago, and unfortunately, we still see vestiges of the same problem."

After his residency, Dr. Prendergast spent two years in private practice in Vermont before moving to Missouri, where he became a staff geriatrician at St. Louis University Hospital. While there, he earned his master's degree in public health and had the opportunity through a Veterans' Administration (VA) program to visit England and Scotland for six months to study geriatric programming.

According to Dr. Prendergast, the English have set up efficient, community-based programs for the elderly. For example, communities offered day hospital programs. Older persons would be transported every morning to a local hospital where they would be cared for during the day and then returned home at night. These programs would cater to each individual's needs by offering physical therapy, occupational therapy, exercise programs, or other medical care. "So if you were a frail, elderly person, you could remain in your home and still take advantage of programs geared to keep you healthy, functional, and independent. Every community had a day hospital program," he says.

Back in St. Louis, Dr. Prendergast was determined to use some of his newly acquired knowledge to improve conditions at the local VA hospital, where he was also on staff. He developed both inpatient and outpatient geriatric evaluation and treatment programs.

Through the nursing home, he and his colleagues incorporated the campus swimming pool and began an exercise program for veterans and amputees. "When I got to the point where I wanted to implement a day hospital program, I ran into a roadblock," the geriatrician explains. "My superiors told me that every dollar we put into community-based programs means less money for the acute care system. This is a real dilemma we have to face—the pie is fixed. Resource reallocation will require evaluation, planning, and compromise."

The Center for Aging

In 1987, Dr. Prendergast came to Pittsburgh as the medical director of Mercy Hospital's Center for Aging. The center has become a valuable asset to physicians and the community as it cares for Allegheny County's large senior population. Eighteen percent of the county's residents are elderly. Next to Dade County in Florida, Allegheny County has the largest percentage population of elderly in the country.

Some of the innovative services offered by the Center for Aging are:

Geriatric Consultation Teams—Dr. Prendergast says that the center is the major source of referral for area physicians. In managing its patient load, the center uses geriatric consultation teams consisting of a nurse, a social worker, and a physician who provide comprehensive patient evaluations at the center or in patients' homes. This assessment includes an evaluation of functional ability, a psycho-social evaluation, and a medical examination.

The center then offers recommendations to help elderly persons remain as functional as possible. In addition, the center assists the Department of Aging's protective services staff in completing assessments of reported elder abuse cases. Several times a year, Dr. Prendergast travels to Harrisburg to train the department's protective services

personnel on how to recognize elder abuse.

Elderfit—This program, run by Connie Bayles, PhD, an exercise physiologist, promotes physical fitness to older adults at 10 sites in western Pennsylvania. "We have 97- and 98-year-olds lifting weights and riding exercise bikes. We have found that older adults can and do want to keep fit and will exercise three, four, five times a week in groups. The program has been very helpful in keeping them independent, out of hospitals, and out of expensive long-term care facilities," Dr. Prendergast says.

Eldercare—In this program, the Center for Aging contracts with companies in the Pittsburgh area to assist employees who are caring for aging parents. Dr. Prendergast says companies are finding that caring for elderly parents creates significant problems which in turn affect an employee's ability to work. The center provides evaluations, answers questions about caring for an older relative, puts the employee in contact with needed resources and support

Something to Send For

The Pennsylvania Department of Aging's *Benefits and Rights for Older Adults* is an invaluable resource for physicians who treat older adults. The booklet, updated annually, includes descriptions of programs and services available to older Pennsylvanians, and provides lists of government and private agencies and local, state, and national organizations which can offer additional help in locating services your older patients may need.

Topics covered in the book include:

- Social Security benefits,
- Medicare and Medical Assistance,
- the state's pharmaceutical assistance program (PACE),
- legal services,
- transportation,
- long-term care and alternative living arrangements, and
- mental health.

To order a free copy, write to the Pennsylvania Department of Aging Press Office, 400 Market Street, Sixth Floor, Harrisburg, PA 17101-2301. Physicians can also order multiple copies of the book at no charge for distribution to patients.

groups in the community, and provides educational information on aging-related topics.

FallsFree—Using a grant from the Scaife Family Foundation, the center is studying ways to decrease the number of falls experienced by older adults. Working with the nursing staffs at two long-term care facilities, the center is examining methods to reduce patient falls.

According to Dr. Prendergast, falls can be extremely debilitating for an older patient and costly to treat. Hip fractures alone cost the United States \$2 billion a year. The study compares simple, fundamental programs, such as encouraging nursing aides to walk patients daily, with more aggressive programs of exercise (e.g., Elderfit, Tai Chi). Patients who volunteer for the program are randomly placed in one of three groups and will be followed for 18 months.

What physicians can do

Dr. Prendergast says that most physicians are aware of the problems facing older adults and their families. Many see cases of elder abuse and do their best under the trying conditions. "I think physicians are under a tremendous amount of stress these days," he explains. "Managed care has entered the marketplace, and they [managed care organizations] are continuously cutting physician reimbursement rates. In order to survive and pay the bills, you have to increase the number of patients you see each day. Few physicians have the luxury I have to spend time with elderly patients and their families to discuss and work out solutions to problems."

However, Dr. Prendergast says there are a few simple things physicians can do to help prevent potential cases of elder abuse:

- *Identify the magnitude of the problem.* Physicians need to survey their elderly patient population and identify those who could potentially experience either passive or active abuse. Pay particular attention to patients who are frail and dependent on a caregiver for all or most of his or her care.

- *Talk to the caregiver.* When talking to an older patient, direct a question or two to the caregiver. "Sometimes the caregiver just needs someone to say, 'How are you doing? Can I help you?'" Dr. Prendergast says.

- *Identify community resources.* Have someone in your office find out what resources are available to help in caring for the elderly. Dr. Prendergast says there are both formal and informal programs available which offer adult day care, caregiver respite, transportation services, and other social services. He suggests contacting area churches, nursing homes, senior centers, and the local Area Agency on Aging when developing this list of community resources.

"Physicians, especially those in primary care, need to know what resources are available in the community to care for the elderly," Dr. Prendergast says. "And, if there aren't enough out there to meet the need, we need to become advocates for our patients and work to get the services that are lacking." ◊

TOUGH, SMART AND YOURS.

They're seasoned attorneys with an incredible record of success. Malpractice specialists in every medical specialty. More than eighty lawyers in twelve offices: they're part of The P-I-E Mutual team...Jacobson, Maynard, Tuschman & Kalur, a formidable defensive lineup, with an imposing record. With nearly 80% of all claims closed without a penny changing hands. Victory in almost 90% of the cases that go to trial. The P-I-E Mutual helps you face your future without fear. With a claims review committee made up of your peers. And a prepaid law firm that can rally its total resources against any and all claims. KePRO Prepares for New National Cooperative Project

Donald E. Harrop, MD

During the past year, we've covered a variety of topics related to the Health Care Quality Improvement Program (HCQIP), which is the new direction of the peer review organization (PRO) program. These included local cooperative projects in general; the Platelet Utilization Project (PUP), which was one of the Keystone Peer Review Organization's (KePRO's) local projects; national cooperative projects; and the Clinical Data Abstraction Centers (CDACs). This month, we'll attempt to blend a few of these items to describe the first actual national cooperative project.

The cooperative cardiovascular project (CCP) will study care provided for Medicare patients admitted to all hospitals in the nation for acute myocardial infarctions (AMIs). It will require the cooperation of organized medicine, individual physicians, and hospitals, with the Health Care Financing Administration (HCFA) and the PROs. The CCP has two major objectives—measuring and improving the quality of care.

The CCP sample includes medical records of 100 percent of AMI discharges, estimated at approximately 200,000 cases, which occurred during a specified eight-month period. These records are currently being requested and abstracted by the two CDACs. Data are collected using the Medicare Quality Indicator System (MQIS), which consists of disease-specific quality indicators that will be used to profile hospitals' patterns of care.

HCFA has worked with the American Medical Association, medical specialty societies, and other health care organizations to develop the CCP, and has adopted the guidelines for treatment of AMI patients

prepared by the American College of Cardiology and the American Heart Association. The quality indicators for this project can be arranged into five topic areas:

- 1) use and timing of reperfusion;
- 2) use of beta blockers;
- 3) use of aspirin;
- 4) management of patients with poor left ventricular (LV) function, measuring the use of ACE inhibitors, and avoidance of calcium channel blockers; and
- 5) risk-factor modification (smoking-cessation counseling).

In March 1995, Pennsylvania hospitals began submitting medical records to the CDAC for collection of information related to the indicators. After abstraction and data entry, the CDAC then transmits the data to HCFA which, in turn, provides state and national data to the PROs.

KePRO will analyze these data and provide Pennsylvania hospitals with their individual hospital-specific data, as well as state and national data. Regional and hospital-specific visits are currently under way for the purpose of disseminating this information. The dialogue which occurs at these visits—which are expected

to continue into mid-1996—will include methods for improvement. When hospitals recognize opportunity for improvement from these visits and from the data, they can make the necessary changes and cooperate with the PRO to measure the effects of the changes.

I think you can now understand why my columns over the past two years have expressed excitement about the great potential for HCQIP. We know our local cooperative projects are helping to improve the quality of medical care, and it won't be long before we will be able to see the results of a national project. ☺

A Medical Seminar in

“OFFICE MANAGEMENT OF CARDIOVASCULAR DISEASE FOR THE GENERALIST”

The topic of this medical seminar workshop was chosen to emphasize the importance of office practice in the diagnosis and management of heart disease. The role of the primary care physician will be highlighted.

Wednesday, December 6, 1995

8:30 AM to 3:30 PM

“CARDIAC AUSCULTATION”

Each participant will use an electronic stethophone headset to complement the clinical case presentations and state-of-the-art lectures on cardiac auscultation coordinated with demonstrations of echocardiography and color flow doppler.

Seminar Director: Allan B. Schwartz, M.D.
Course Co-Directors: Leonard S. Dreifus, M.D., Gerald Scharf, D.O.
Daniel Mason, M.D., John J. Ross, R.C.P.T.

These programs are being funded by an educational grant from:
THE EDNA G. KYNETT MEMORIAL FOUNDATION
specifically for the purpose of supporting Continuing Medical Education programs
in cardiovascular disease targeted for *primary care physicians*.
This support is gratefully acknowledged.

Location: Classroom C (Alumni Hall), 2nd Floor College Bldg., 15th & Vine, between Race & Vine, Philadelphia, PA

Full Disclosure Statement: All faculty participating in continuing medical education programs sponsored by Medical College of Pennsylvania and Hahnemann University are expected to disclose to the audience any real or apparent conflict(s) of interest related to the content of their presentation.

Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. MCPHU designates each hour of attendance at these activities for 1 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association.

For course information call: 215-762-8695

IT'S THAT TIME OF YEAR: FLU SHOT DOSAGES

Have your patients received their influenza vaccine yet? Optimally, patients at risk should receive the vaccine by late October or during November. Who does that include?

- people 65 years of age and older;
- residents of long-term care facilities;
- immunocompromised patients;
- any adult or child with a serious long-term health problem (heart, lung, or kidney disease, asthma, anemia, or diabetes);
- children between six months and 18 years of age on long-term aspirin treatment (Reyes Syndrome can develop); and
- pregnant women and anyone who has close contact with any of the aforementioned.

The dose for patients three years and older is 0.5 ml. For children between six and 35 months, the dose is 0.25 ml. Children 13 years and younger should receive the split virus. Vaccine protection occurs within seven to 14 days upon administration and may last up to one year. Children less than nine years old may require one additional shot after one month of therapy.

For adults and older children, it is best to give the vaccine intramuscularly in the deltoid muscle; however, the preferential site in younger children is the anterolateral aspect of the thigh. The viruses contained in the vaccine this year are:

- A/Texas/36/91 (H1N1),
- A/Johannesburg/33/94 (H3N2), and
- B/Harbin/07/94.

Contraindications to this vaccine include patients who have a history of egg or egg product allergy and/or hypersensitivity to any component. Treatment should be deferred in those patients with acute respiratory disease or other active infection or acute febrile illness. Precautions should be taken with concurrent vaccine administration, febrile reactions, GBS (Guillain-Barre syndrome), and patients sensitive to sulfites.

The most common adverse reaction is soreness at the injection site and may last up to two days. Fever, malaise, and myalgia occur moreso with children six to 12 hours after the injection and may also last up to two days. Flare and wheal and various respiratory symptoms are indicative

of an allergic reaction, and usually occur immediately.

For a free copy of the CDC's *Fact Sheet on Influenza Vaccine*, call the Center at (800) 228-7823 or (717) 558-7750.

MEDICATION UPDATE

NEW INDICATIONS

Foscavir® (foscarnet)—Approved for treatment of acyclovir-resistant herpes simplex virus (HSV) in immunocompromised patients.

Prilosec® (omeprazole)—Newly indicated for maintenance therapy in erosive esophagitis.

Zantac® (ranitidine)—Updated from short-term treatment of benign gastric ulcer to include active ulcer and maintenance therapy, as well as for treatment of erosive esophagitis.

Zocor® (simvastatin)—Indicated to reduce the risk of total mortality by reducing coronary death, nonfatal myocardial infarction (MI), and revascularization procedures in coronary heart disease (CHD) in patients with hypercholesterolemia.

Zofran® (ondansetron)—Now also indicated for the prevention of postoperative nausea and vomiting, and prevention of nausea and vomiting associated with radio therapy.

NEW DRUGS

Caverject® (alprostadil)—New injectable agent for the treatment of impotence.

Prevacid® (lansoprazole)—Proton pump inhibitor for erosive esophagitis and active duodenal ulcer.

Valtrex® (valacyclovir HCl)—For treatment of herpes zoster (shingles) in the immunocompromised adult patient.

ON THE HORIZON

Look for **Zantac 75®**, for the treatment of heartburn, and the

NSAID **Orudis® (ketoprofen)**, for the treatment of pain and fever, to join the family of RX to OTC medications.

Fosamax® (alendronate), a biphosphonate similar to **Didronel® (etidronate)**, indicated for the treatment of osteoporosis in women, should have approval from the FDA by the end of the year. It can be used as single-agent therapy or in combination with estrogens. Look for a joint marketing venture from Merck and Wyeth for combination therapy of **Fosamax®** and **Premarin®**.

Q&A: DRUG UTILIZATION

The State Society's Center for Professional Drug Education and Information receives numerous inquiries from physicians about drug interactions, side effects, and other drug utilization issues. In an effort to share this information, the Center selects a question of general interest to appear in this column each month. The response, prepared by our clinical pharmacist, Anita Fabert, RPh, is based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823 or (717) 558-7750.

Q: What are the most common drug-drug interactions for antihistamines and decongestants?

A: Atarax®, Benadryl®, Chlor-Trimeton®, Claritin®, Hismanal®, Seldane®, and Tavist® are the most frequently prescribed or recommended antihistamines. The most common drug interactions are with those medications that cause additive CNS depressant effects such as barbiturates, benzodiazepines, tricyclic antidepressants, other H₁ blockers, and ethanol. Additive anticholinergic effects are also common and seen when agents such

as atropine, benztropine, phenothiazines, and tricyclic antidepressants are given concomitantly.

The most serious interaction, however, occurs when the prescriptive antihistamines (Claritin®, Hismanal®, and Seldane®) are concurrently given with macrolide antibiotics (i.e. erythromycin) and antifungal agents (i.e. ketoconazole, itraconazole). Cardiac toxicity—in which serious arrhythmias as well as death have

occurred—is possible in patients given this combination. Therefore, the co-prescribing of these agents is contraindicated. Seldane® has been associated with torsade de pointes, thus contraindicating its use in patients on antiarrhythmics, antipsychotics, and tricyclic antidepressants.

Phenylephrine, phenylpropanolamine, and pseudoephedrine are the most common decongestants in use, both for prescription and over-the-counter

medications. The most common and serious interaction is that these agents can decrease the effect(s) of antihypertensive medications. Therefore, decongestants should be avoided in those patients. Patients on MAOI (monoamine oxidase inhibitors) therapy should not be given decongestants because of the possibility of a hypertensive crisis.

To receive a more detailed listing of the above interactions, please call the Center at (800) 228-7823 or (717) 558-7750.

BITUARIES

Harold H. Chadwick, MD, Wysox

New York Medical College, 1964; age 67, died August 17, 1995. Dr. Chadwick was a family practitioner. •

Thomas C. Dees, MD, Wynnewood

Medical College of Georgia School of Medicine, 1945; age 74, died August 27, 1995. Dr. Dees was an anesthesiologist. •

Herbert Frankenstein, MD, Van Nuys, CA

University of Pittsburgh School of Medicine, 1922; age 97, died September 17, 1995. Dr. Frankenstein was a general surgeon. •

George L. Gleeson, MD, Camp Hill

University of Pittsburgh School of Medicine, 1936; age 81, died July 24, 1995. Dr. Gleeson was a gynecologist. •

Paul A. Hinchberger, MD, Jensen Beach, FL

University of Pittsburgh School of Medicine, 1937; age 83, died July 27, 1995. Dr. Hinchberger was a family practitioner. •

Samuel A. Kirkpatrick, MD, Hanover

University of Pennsylvania School of Medicine, 1942; age 78, died August 19, 1995. Dr. Kirkpatrick was an obstetrician/gynecologist. •

Ismail Nabati, MD, Bethlehem

Tehran Medical School, Iran, 1965; age 58, died August 30, 1995. Dr. Nabati was a general surgeon. •

Horace Pettit, MD, Gladwyne

Age 92, died September 11, 1995. Dr. Pettit was an anesthesiologist. •

Daniel H. Rosen, MD, Titusville

University at Stony Brook School of Medicine Health Sciences Center, New York, 1975; age 48, died August 25, 1995. Dr. Rosen was an otolaryngologist. •

Norbert F. Alberstadt, MD, Erie

Jefferson Medical College of Thomas Jefferson University, 1944; age 77, died August 14, 1995. Dr. Alberstadt was an ophthalmologist. •

Robert W. Hanisch, MD, Beaver

Medical School of Santiago, Dominican Republic, 1985; age 45, died September 9, 1995. Dr. Hanisch was an internist. •

Joseph J. Prorok, MD, Allentown

Jefferson Medical College of Thomas Jefferson University, 1963; age 58, died July 2, 1995. Dr. Prorok was a general surgeon. •

Paul R. Sieber Jr., MD, Pittsburgh

University of Pittsburgh School of Medicine, 1940; age 72, died May 13, 1995. Dr. Sieber was a general surgeon. •

Curtis W. Vickers, MD, Stillwater

George Washington University School of Medicine and Health Sciences, Washington, DC, 1977; age 42, died June 6, 1995. Dr. Vickers was an obstetrician/gynecologist. •

Kent E. Weiss, DO, Lancaster

Philadelphia College of Osteopathic Medicine, 1979; age 45, died July 22, 1995. Dr. Weiss was a general practitioner. •

Telemedicine and the Payment System

George Ross Fisher III, MD

Free medical phone service has become a professional courtesy, but recent changes in the practice environment should prompt a reexamination of this free service as perhaps an anachronism which is getting in the way of progress.

Practicing medicine over the telephone is not new: The first description of it in the medical literature appeared in the British journal *Lancet* in 1879.¹ Somehow, the unexplained tradition grew up that physicians do not charge for telephone consultations—even though lawyers and computer technicians do so regularly—but pressures are building to make charging for phone calls more common.

For one thing, doctors working on salary or on retainers ("capitation") have a method for being reimbursed for their time without itemizing it. They also have an incentive to promote the substitution of a phone call for an office visit, a practice the public has been educated to expect from HMOs.

People have become accustomed to substituting the fax machine—and other telecommunications such as e-mail—for face-to-face encounters, so why not in medical encounters? The conventional medical office is getting out of date, and the reimbursement system is keeping it that way.

A few free calls

James Studdiford, MD, who switched from practicing family medicine to teaching the subject at Jefferson Medical College of Thomas Jefferson University, estimates that he averaged 10 phone calls a day during his 19 years in practice—a total of 56,000 phone calls. He makes the telling calculation that his gross income was reduced by \$75,000 a year—times 19

makes \$1,425,000—assuming each free call might instead have been a paid office visit. That's 25 percent of his patient contacts, at a probably underestimated average time of 34 minutes a day, not counting time to retrieve and update office records.

My own experience is that to return four phone calls, an hour is gone. Add to this the grating irritation of being interrupted while a paying patient is made to wait, the caller's sometimes shamelessly obvious motive of obtaining service without paying for it, and the disruption of an orderly schedule. There are times when every physician considers charging for the interruption, and charging plenty high to discourage any more of it.

Records at Jefferson Family Practice Clinic show that calls result in the need for an urgent visit 10 percent of the time when an internist is called, but 20 percent of the time when a family practitioner is called (due to a high number of pregnant women). Forty-seven percent of calls concerned a symptom, 20 percent involved a prescription renewal, and 11 percent concerned anxiety to hear the results of laboratory or x-ray studies. Eighty percent of calls concerned trauma, pregnancy, or colds.

Making it difficult for patients to reach the doctor is no solution: Surveys of patients in the British medical system show the leading source of patient dissatisfaction is inability to reach a physician by phone. The public, in other words, strongly desires to be able to telephone a doctor. Inevitably, the public must then acknowledge the need to pay for its wishes, now that the pressure on physician reimbursement makes for heightened unwillingness to subsidize it.

Calling all insurers

Insurance companies have been fiercely resistant to paying for telephone calls for the obvious reason that it is difficult to monitor, and also because the medical directors of insurance companies are typically doctors who have retired from practice. Recollecting their own experi-

Dr. Fisher, a Philadelphia endocrinologist, is the Society's First District trustee.

ence of treating phone calls as a courtesy, they feel smug now that they are on salary with fringes.

But insurance companies may well be doing themselves in by holding to that no-pay policy. One controlled two-year study of a primary care clinic asked the clinicians to double the interval to the next visit and substitute three intervening phone calls. The study then showed 19 percent fewer visits, which would be expected, but also the more dramatic effects of 26 percent fewer hospital days, 41 percent fewer days of intensive care unit usage, and 28 percent less overall expenditure.²

All of this was accomplished with no discernible difference in health outcome measures. If anything even remotely resembling this result would be generally true, insurance companies would be mad not to conduct campaigns to persuade doctors to "make more phone calls, and please accept the enclosed reimbursement."

Is it likely that Blue Shield and Medicare Part B would willingly deplete their premium reserves to save money for other organizations? More likely, insurers would call for protracted study. If the public wants insurance companies to pay doctors for phone consultations, the public had better start making a fuss about it, because the proposal confounds the reimbursement industry.

The sympathetic physician

There remains the curiosity that most physicians would to some degree regret an evolution toward charging for telephone consultations. Aside from who pays the phone bill, the issue tends to revolve around impediments to organizing a system of physician-initiated calls—the most effective sort. Doctors simply have no training in effective use of physician-initiated calls.

Finally, precipitate a new hospital-trained physician into his or her own office at the end of training, and watch the doctor struggle for a year or more to organize his or her system in an efficient way. With no one to teach the doctor, and certainly no one offering to pay him or her, phone calls are quickly seen as a disruptive nuisance.

Who calls whom

We've assumed so far that the patient initiated the call, but the patient may or may not be willing to pay for it. All a doctor has to sell is advice. People pay for advice, but whether or not they accept the advice is their own decision. True, in extreme instances of patient wrong-headedness, the

conscientious doctor does feel an obligation to remonstrate, appeal to more sensible members of the patient's family, or repeat the advice in much stronger language. But everyone has a right to do what he or she pleases, even if what he or she pleases is self-destructive, counterproductive, or stupid.

When we get into physician-initiated calls, however, an entirely new dynamic jumbles the discussion. Suppose a patient has not followed advice to have a certain test. Is it the responsibility of the physician to notice the lapse, to call, and to badger compliance? It seems "good medicine" to do so, but who can blame the insurance company for reluctance to pay for a non-requested service? Is the physician obliged to send letters advising annual flu shots, mammograms, or pap tests—or is that solicitation of trade?

Let's go a step further: One hospital reported it worthwhile to call every emergency room patient and ask if they were taking their medicine or were unclear about any instructions. Many people proved to have been all mixed up and were grateful for the gracious assistance. Presumably, however, others were annoyed at being bothered and suspected somebody of trying to drum up unrequested business. These gratuitous follow-up calls cost money, and quite obviously, they go well beyond the doctor simply charging for advice.

An insurance company might well say that since no one requested the calls, write them off as promotional expense. But of greatest significance is the evolving societal attitude that the doctor has a paternalistic obligation to make the patient do what is best, whether the patient feels like doing it or not.

Many malpractice suits have grown out of the ambiguity of this type of encounter, using the concept of physician "abandonment." In the eyes of the plaintiff bar, a physician is guilty of negligence if his or her patients are permitted to be reckless with their own health, unless, of course, the physician has documents exonerating him or her from responsibility. You can be sure that some people will shrug off all manner of advice and exhortation, only to start a lawsuit claiming physician negligence for failure to be convincing.

And once again, the insurance company can say: Fine, protect yourself against lawsuit by doing anything you please, but don't ask us to pay for it. That's open-ended, with too much potential for abusive over-utilization under the cloak of solicitude.

→

"Aside from who pays the phone bill, the issue tends to revolve around impediments to organizing a system of physician-initiated calls—the most effective sort."

"The possibilities which exist with present communications technology would take pages to describe, without any mention of communication technology as yet unimagined."

Finding a direction

This seems to lead to reexamination of the basic contract between patient and physician, to make it clear from the outset just what everyone is contracting for. A radiologist, seeing cancer in a breast, is the only physician who knows about it at that moment. His or her duty is to be sure some other physician is aware of his or her findings and will accept responsibility for doing something about it.

The radiologist probably should not be expected to keep watch on the pathology reports, to make certain a biopsy was performed. Therefore, the insurance reimbursement for interpreting breast x-rays should reasonably include financial recognition that a certain number of referring doctors are going to be hard to find and costly to locate.

If the radiologist notices a merely suspicious lesion and advises follow-up in six months, it is probably reasonable for the insurance company to pay for the second x-ray, plus the cost of chasing a certain percentage of hard-to-find patients. Possibly, the duty of urging the second x-ray should belong to the referring or attending physician; some way to pay for his or her trouble must be found. Examples of similar non-reimbursed "good medical care" are multiplying daily and were never considered in Dr. Tsao's famous study of relative values of medical procedures.

In this morass of uncertainty, it is tempting to make a distinction between specialists and primary care physicians, and to apply a retainer or capitation system of reimbursement to the primary care physicians. As illustrated by the radiologist and the breast cancer, the problems of specialists are more definable because a specialist is almost always dealing with specific illness, treatment, or complaint.

All of the quirks of the follow-ups in those conditions have not been worked out, but they could be. In the case of primary care physicians, however, the variables are mostly the accidents and anxieties of population groups. An average

could be worked out, and the physicians paid a yearly retainer to develop and maintain an effective system of communication with the practice. Let the physician decide whether it is better to write or to call, whether to call personally, or hire someone to do the calling. Let it be a matter of negotiation whether to charge extra for a hypochondriac or bury the extra cost in the averages.

The contract would lie between the insurance company and the physician to absorb the costs for a given patient, who must choose one physician for a year, but whom the physician can drop at the end of a year. The retainer fee might or might not include the service of acting as a gatekeeper authorizing specialist referrals. Specialists might not like the concept of gatekeeping, but accepting it might be the price of retaining a fee-for-service system for themselves.

Notice that the primary care physician need not be paid for other medical services on a retainer basis; only the gatekeeping and paternalism really need a more global sort of reimbursement. Notice particularly that the necessary discussions have not been held, with all of their what-ifs.

Discussing the narrow issue of reimbursing for physician-initiated calls merely opens the door to what lies ahead. Would it not be desirable to have diabetics, now that they have learned to perform home blood sugars on themselves, fax the results to the physician for his return fax, adjusting insulin doses? Or to have nurses, social workers, interns, and residents join together on a conference call? E-mail? To discuss cooperative management of the patient?

X-ray images are now being sent from remote locations to a specialist hundreds of miles away; why couldn't a patient with a rash hold it in front of a camera for a dermatologist to see?

The possibilities which exist with present communications technology would take pages to describe, without any mention of communication technology as yet unimagined. Whether such ideas would make care cheaper or more expensive is debatable, but it's easy to describe ways it would make health care better.

Is it possible that what stands in the road of such things is not a conservative medical profession, but an unimaginative reimbursement industry? ☐

Pennsylvanians for Merit Selection

Lynn A. Marks
Ellen Mattleman Kaplan

Would you prefer to spend 24 hours on call or 24 seconds in a courtroom? For most doctors, the former is infinitely desirable. Yet, sometimes doctors do wind up in court. That is precisely why the medical community must pay attention to how we select the judges whose review of trial court and jury decisions—in cases ranging from medical malpractice to health insurance—can have an irrevocable and dramatic impact on careers and personal lives.

This month, Pennsylvanians will choose four statewide judges—two on the Supreme Court and one each on the Superior and Commonwealth Courts—and local trial court judges. While you may be familiar with the local candidates, how well did you know the candidates for statewide office?

Chances are you didn't know them at all, which puts you in good company with the vast majority of voters. According to a statewide poll taken this September by Millersville University, 84 percent of the respondents knew only a little or nothing at all about the appellate court candidates.

This shouldn't be true in 1995. In the last two years, the appellate courts have made headline news unlike ever before. The first Supreme Court Justice in Pennsylvania's history was convicted of conspiracy and impeached by the Senate. Legislators have responded by proposing an unprecedented number of initiatives designed to restore the public's confidence in the courts. Even the high court itself felt the need to conduct a self-examination that led to new operating procedures.

Unfortunately, none of this yielded a better method for ensuring that only judges of the highest competence and integrity serve on those courts. Regrettably, statewide judgeships are still elected positions largely won by political connections, regional bias, money, and/or luck.

During this past primary season, luck favored appellate court candidates from Allegheny County where a hotly contested county commissioners' race boosted turnout. This allowed two Pittsburgh

contenders with well-known names to defeat their party-endorsed challengers.

Money was less important than luck, at least for this year's primary. Was this because lawyers—the major contributors to judicial candidates—decided en masse that it was unseemly to finance the campaigns of those before whom they may later have cases? Hardly. In the case of the plaintiff's bar, it's more likely that they have redirected their dollars to oppose tort reform in Washington.

Does it make any sense for judges to be chosen because of where they live, whether they have a recognizable name, or, in some years, how much money they are able to raise? A vastly preferable way to select statewide judges is through an appointive system based on merit. Merit selection creates a non-partisan nominating commission to conduct a comprehensive review of the *qualifications* of judicial applicants.

The commission would be composed of non-lawyers and lawyers, women and men, and would reflect the geographical, ethnic, and racial diversity of Pennsylvania. Members would be appointed by the governor and legislative leaders of both parties. After receipt of the commission's list of the most highly capable candidates, a nominee would be chosen by the governor, subject to Senate confirmation.

Merit selection takes chance out of the process of choosing statewide judges. It also removes the need for fundraising from attorneys or potential litigants, and therefore the possibility that you may find yourself in a courtroom facing an opponent (or his/her lawyer) who has contributed to the presiding judge's campaign.

Since most other states have adopted an appointment system for their appellate judges, it makes you wonder why the Pennsylvania Trial Lawyers Association and labor unions remain so vehemently opposed to this reform. Fortunately, a great many statewide and local organizations—including the Hospital Association of Pennsylvania, Pennsylvania Chamber of Business and Industry, and League of Women Voters of Pennsylvania—have joined the Pennsylvania Medical Society as supporters of merit selection. ☐

What It'll Take

Merit selection can only be enacted if approved by the electorate in a referendum vote. Before that happens, however, the General Assembly must pass a proposed merit selection constitutional amendment in two consecutive legislative sessions. Amendments that can get the ball rolling have been introduced this session in the state Senate and House.

Ms. Marks is executive director and Ms. Kaplan is associate director of Pennsylvanians for Merit Selection, a statewide, non-partisan organization working for reform of the state judicial selection system.

BOARD ACTIONS SUPPORT TECHNOLOGICAL ADVANCES

The Society's Board of Trustees in September approved several recommendations of the Physician Communications Technology Committee, created early this year to study potential uses for videoconferencing and computer bulletin board technologies. Among the approved recommendations:

- **Forward to the House of Delegates an information report entitled, "Strategy for Encouraging Physician Involvement in New Communications Technologies"**—Outlines the committee's priorities to: 1) expand use of fax technology; 2) develop member access to electronic bulletin boards; and 3) monitor developments in videoconferencing.

The Society has already moved on a recommendation to make the Society accessible by electronic mail (e-mail) at the address, stat@pamedsoc.org.

- **Direct all Society councils to place a high priority on identifying the kinds of information they collect or generate that would be of value to the Society's members, and on feeding that information into the Society's developing fax-on-demand and computer bulletin board services**—Supports the Society's efforts to be an information source for its members, and draws upon the council bodies' knowledge of physician interests and needs.

- **Become a member of the Pennsylvania Information Highway Consortium**—Allows the Society to participate for a minimal fee in statewide discussions on forming a workable technology infrastructure in the commonwealth, including telemedicine and community health information network (CHIN) programs under development.

- **Grant a one-year extension to the committee**—Continues physician input into the technological process and how to encourage member use of the technologies, as well as monitoring of developments in videoconferencing. A determination will be made next year whether or not the committee should continue for a third year.

For more on Society and committee efforts with new technologies, see "Society Communications Go High(er) Tech," on page 12.

MEDICAL SCHOOL NEWS

PCOM BOASTS LARGEST CLASS IN 97-YEAR HISTORY

In August, 251 new students matriculated as first-year students at Philadelphia College of Osteopathic Medicine (PCOM).

The class of 1999, the largest in the college's 97-year history, was selected from the largest-ever applicant pool. The class is 44 percent female, also representing the largest enrollment of women in PCOM's history. An overwhelming 90 percent of the freshman class indicated an interest in

pursuing primary care medicine as a career choice.

Leonard H. Finkelstein, DO, PCOM president and CEO, says, "The level of interest in primary care is especially encouraging. Primary care is at the very heart of the osteopathic medical philosophy, and PCOM's record of graduating primary care physicians is rapidly becoming a national educational benchmark."

PCOM, the oldest osteopathic medical school in the country, graduates more primary care physicians than any other medical school in the nation: More than 60 percent of the Class of 1995 chose primary care fields.

Earlier this year, the college was the recipient of a \$1.5 million state grant to increase the number of graduates who pursue careers in primary care.

Warning: Con Artists at Work

Con artists peddling office machine supplies are targeting you and your office staff. Here's how they operate:

- 1) An anonymous individual will call conducting a survey on the types and brands of office equipment used by your staff. Generally, they are most interested in copiers, printers, fax machines, and especially an employee's name.

- 2) In a week or so, someone else in your office will receive a call "confirming" shipment of three XYZ toner cartridges (amazingly, the brand you use). "Why, yes, I just spoke to <insert name here> about this last week," states the caller. A simple "yeah, whatever" is all the authorization they are looking for.

- 3) Within days, a package and invoice arrive. For many organizations, particularly larger ones, it is easier to pay the bill than try to figure out who ordered the supplies. Offices that attempt a return are surprised by the vendor's policy: a huge restocking fee, or better yet, threat of legal action if you do not pay the bill in full.

There are many variations on the scenario just described. The following types of calls hint of trouble:

- Anyone calling for details on office equipment brand names and model numbers.
- When identifying themselves, the caller will mumble the company name or speak rapidly so as not to be understood. Some will attempt to imply they are calling from your regular vendor. For example, "This is Jim calling from the service center...."
- Calls confirming a shipment or a shipping address.
- Offers of "free" toner or demonstration units.
- For that matter, any caller who mentions toner or office equipment.

Advising your staff of such activity up front can save you money and grief in the long run.

Shawn P. Harbaugh, the Society's information systems programmer, contributed to this article.

State Society Applauds Tobacco-Free Pharmacies

More than 400 pharmacies statewide that do not sell tobacco products were recognized by the State Society in November for their anti-smoking stance. The State Society, in cooperation with the Pennsylvania Pharmacy Association, has sponsored the pharmacy recognition program since 1991. For additional information about this program, call the Society's Division of Communications at (800) 228-7823 or (717) 558-7750.

Robert H. Fitzgerald Jr., MD, was appointed professor and chairman, Department of Orthopedic Surgery, University of Pennsylvania Medical Center, Philadelphia.

Larry I. Barmat, MD, Department of Obstetrics and Gynecology, Albert Einstein Medical Center, Philadelphia, has received the S. Leon Israel Award for excellence in research.

Medical College of Pennsylvania and Hahnemann University, Philadelphia, has appointed **Trevor R.P. Price, MD**, chair, Department of Psychiatry.

Bijan Etemad, MD, was appointed chairman of the Department of Psychiatry, Graduate Hospital, Philadelphia. Dr. Etemad will also oversee a psychiatry liaison program which involves Graduate Health System Parkview and City Avenue Hospitals, as well as Graduate and Mt. Sinai hospitals.

Seth Koss, student at the University of Pennsylvania, Philadelphia, has been selected as a 1995 Pisacano Scholarship recipient. The scholarships, valued up to \$50,000 each, are awarded to students attending U.S. medical schools who demonstrate a strong commitment to the specialty of family practice.

William J. Provance, DO, a gastroenterologist and hepatologist, Latrobe Area Hospital, was appointed assistant professor of gastroenterology, Lake Erie College of Osteopathic Medicine, Erie.

J. Harris Joseph, DO, Bala Cynwyd, was appointed clinical associate professor of surgery, Jefferson Medical College of Thomas Jefferson University, Philadelphia.

Craig J. Ross, DO, was named medical director, Carpenter Technology Corporation, Reading.

Barbara T. Williams, DO, was recognized by the Student Osteopathic Medical Association of the Philadelphia College of Osteopathic Medicine for serving as a positive role model for student doctors.

B. David Horn, MD, and **G. Dean MacEwen, MD**, have joined the section of orthopedic surgery, St. Christopher's Hospital, Philadelphia,

and were appointed professors of orthopedic surgery and pediatrics, Medical College of Pennsylvania and Hahnemann University School of Medicine, Philadelphia.

Flaura K. Winston, MD, was awarded the 1995 Melville Medal from the American Society of Mechanical Engineers for her paper, "An Analysis of the Time-Dependent Changes in Intracellular Calcium Concentration in Endothelial Cells in Culture Induced by Mechanical Stimulation."

Penn State's Milton S. Hershey Medical Center has appointed **Diane E. Schuller, MD**, chief, Division of Allergy, Immunology, and Pulmonology, and professor of pediatrics.

Albert J. Stunkard, MD, emeritus professor of psychiatry, University of Pennsylvania Medical Center, Philadelphia, has received the Academy of Eating Disorder's Lifetime Achievement Award.

Robert L. Comis, MD, Ludwig A. Kind professor of medicine and director of clinical programs, Jefferson Medical College of Thomas Jefferson University, Philadelphia, was elected group chair of the Eastern Cooperative Oncology Group—a consortium of university medical centers and community-based programs working to improve outcomes for cancer patients nationwide.

Dr. Gross

George W. Gross, MD, director, pediatric radiology, Thomas Jefferson University Hospital, was appointed chairman, Department of Medical Imaging, Alfred I. duPont

Institute, Philadelphia.

John R. Ball, MD, was named executive vice president for clinical services, Pennsylvania Hospital, Philadelphia.

The Institute of Pennsylvania Hospital, Philadelphia, has elected the following officers of the medical staff: **Newell Fischer, MD**, president; **David Ellis, MD**, executive vice president; **Lewis**

Dr. and Mrs. Dominic A. DeLaurentis received the Good Samaritan Award from the Pennsylvania Hospital, Philadelphia, for their dedication to the hospital and their longstanding support of its programs.

Merklin, MD, administrative vice president executive/treasurer; and **Christie A. Huddleston, MD**, secretary.

Albert Einstein Medical Center, Philadelphia, has appointed **Earl J. Fleegler, MD**, director of the Hand Program.

University of Pittsburgh Medical Center has appointed **Howard Cohen, MD**, director of the newly formed Cardiac Laser Center.

Christine Laine, MD, assistant professor of medicine, Jefferson Medical College of Thomas Jefferson University, Philadelphia, was selected as a Picker/Commonwealth Scholar by the Commonwealth Fund, a New York City-based national philanthropy concerned with health and social issues. The award is a two-year grant of \$100,000 to support her research on patient knowledge following primary care visits.

Leonard S. Jacob, MD, Penn Valley, was honored by the Medical College of Pennsylvania and Hahnemann University School of Medicine for furthering the creation of the Edward Jekkal Muscular Dystrophy Association Fellowship.

Santiago J. Munoz, MD, was appointed director of the Center for Liver Disease, Albert Einstein Medical Center, Philadelphia.

Michael Glacken, MD, was appointed medical director of Horsham Health Systems, the integrated delivery services of The Horsham Clinic.

Azar Peter Dagher, MD, was appointed assistant professor, Division of Neuroradiology at Thomas Jefferson University Hospital, Philadelphia.

Patient Impatience Can Cost Your Practice Business

Keeping your patients happy is the key to keeping their business; making them wait for you will make them unhappy. In most cases, you can *avoid* making your patients wait for you. But if not, make their wait as comfortable as possible, and take steps to prevent the chaos that will develop from a derailed schedule.

Your patients value their time, just as you do. If you were asked to attend a meeting and waited 45 minutes or an hour for it to start, how would you feel? Now, think of the patients in your waiting room as people you invited to a meeting, and remember that many of them feel miserable at the start.

Patients who are sufficiently annoyed at you will leave your practice. Also remember that managed care organizations use patient satisfaction surveys to help decide which physicians to select for or deselect from their provider panels.

Avoid lateness

Most physicians are trained to be reactive; the patient presents and the physician acts. In business, being proactive brings greater success. Your medical practice is a business, so be proactive. Start by planning to avoid lateness. If you are unlikely to arrive at the office by 9:00 a.m. (for example, because your route from home to the office frequently is jammed), schedule appointments beginning at 9:30 a.m.

Scheduling adequate time between your hospital duty and patient visits will reduce both the length of time you keep patients waiting and the number of occurrences of lateness. If you are in a group, have one practice associate at the hospital cover for the other associates. This even works for some ob/gyn practices, as long as the expectant mother links your associate with you, and you visit to check on mother and baby as soon as possible after delivery.

Form a plan

Of course, problems happen, regardless. If you usually schedule

five patients an hour and arrive at your office an hour late, you will find at least five patients in the office, and five more will be on the way. Design a contingency plan to keep the number of patients in your office to five or six. This will prevent a backlog that is difficult to overcome, reduce patient dissatisfaction, and make your receptionist look and feel competent.

For example, if you call the office and say, "I'm running 30 (or 60) minutes late; go to Plan A," your staff can explain to your patients about how late you are running, apologize for the inconvenience, offer to reschedule appointments, and make your patients as comfortable as possible.

Then, your staff can contact the next five patients in the appointment book, inform them that you are running late, and ask to reschedule their appointments, perhaps offering more favorable time slots. Most non-emergency patients will understand and appreciate your call, preferring to reschedule rather than arrive at your office to learn there is an hour (or longer) wait.

Try to compensate already waiting patients for the delay. For example, informally reduce your fee or waive your copay, and offer to pay transportation or parking costs. Stay late to accommodate those patients who waited for you. Make sure you give each one of them ample time in your office. A patient who wastes an hour or more in your waiting room and who then is rushed out of your office may be angry enough to blame you for any adverse outcome, whether it was your fault or not.

Make waiting comfortable

To make waiting as comfortable as possible, consider the following:

- a television set and VCR, especially for educational tapes;
- a diverse selection of current magazines;
- storybooks, puzzles, coloring books, and crayons;
- daily newspapers;
- reading lamps on end tables;

- plenty of comfortable chairs;
- (crying) children's room/area;
- separate room for children with infectious diseases (especially for pediatrics practices);
- free telephone, for local calls, in the waiting room (patients may need to inform others of a delay—using your staff's phone is awkward and it ties up that phone);
- coffee, tea, water, juice, soft drinks;
- a rest room, with changing table, conveniently located off the waiting room; and
- an aquarium.

Other things you can do

Obtain free patient educational materials from pharmaceutical and device manufacturers, HMOs, and medical societies and organizations. For example, you can give a patient with low back pain a pamphlet on its causes and treatments to read while waiting. This not only makes for a more effective visit with you, but it also gives the patient something to take home and refer to as needed. A better informed patient is more likely to follow prescribed treatments and feel better sooner.

Observe fair queuing rules. If your patients schedule appointments days or weeks in advance, see them *at the appointed times*, and allow walk-ins to wait longer. Especially if yours is a primary care practice, consider establishing "open" hours for patients who must see you today, and call for short notice appointments.

If possible, arrange your office so that patients in the waiting room, not the examination/treatment rooms, have *windows*; at least waiting patients can watch the world pass by.

Remember: Anything that makes good business sense is good for your medical business. Avoid making your patients wait for you. If delay is unavoidable, have your staff explain the delay, apologize, make the wait as comfortable and interesting as possible, and reschedule as many patients as possible. And reinforce the goodwill your staff generates by *personally* apologizing to your patients.

USQA® Managed Care Fellowship

The U.S. Quality Algorithms® (USQA®) Managed Care Fellowship, a unique collaboration between one of the country's foremost managed care companies and Jefferson Medical College, Philadelphia, is soliciting applications for its 1996-1997 program, to begin July 1996. The program's goal is to prepare physicians to assume leadership roles in contributing to the formation, conduct, and evaluation of health care-related policy in a variety of settings. It is aimed at physicians who seek additional training and experience relevant to the delivery of high-quality, cost-effective care. Typical candidates will have completed a residency in fields such as internal medicine, family practice, or pediatrics, though applicants with other backgrounds will be considered. **Dead-line for applications: December 15, 1995.**

For information, contact Susan Howell, Jefferson Medical College, 621 Curtis, 1015 Walnut St., Philadelphia, PA 19107, 215-955-9995.

Part-time Position available, day, evening, or weekends. Modern urgent care center, suburb of N.E. Philadelphia. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Kravitz (215) 638-0666.

Family Medicine/Internal Medicine—Procedure-oriented comprehensive and stimulating multispecialty outpatient medical practice in attractive suburb of northeast Philadelphia, desires additional full-time staff physician. Ultramodern facility with full on-site diagnostic and therapeutic support. Attractive salary, full benefits package, and long-term security potential make this an opportunity that is most desirable for the stable, career-oriented applicant. Contact Dr. Kravitz (215) 638-0666.

Position Available—Family physician invited to join established group in our mission to provide whole-person care in beautiful rural westcentral PA. Christian staff includes 4 FPs and ancillary staff providing full range of family medicine, including OB, with a well-equipped office. 200+ bed high quality general hospital with good specialty relationships. A private non-profit Christ-centered social service agency is part of our health center. Women candidates encouraged to apply. We are developing academic rotations with area medical schools with opportunities for faculty and academic appointments. If you desire to grow in a biblical expression of your profession or

want more information, contact: Stanley Lang, MD, Agape Family Health Center, PC, 216 Liberty Blvd., DuBois, PA 15801 (voice (814) 375-1222, fax (814) 375-9366).

Physician—MD or DO—BE/BC, experienced in General Internal Medicine/Family Medicine/Physical Medicine or willing to learn same to join multi-office group. Salary and benefits negotiable. Physicians Financial Planning, Suite 102, 225 City Line Avenue, Cynwyd, PA 19004, (610) 668-3666.

Pittsburgh, PA—IM/FP. An outstanding group, consisting of seven internists, is seeking a BE/BC internist or family practitioner to join their well-established and growing practice. This group, which has been together for more than 11 years, admits patients to a major tertiary care teaching facility (containing an internal medicine residency program). An opportunity exists for the new associate to practice in the northern or eastern sections of Pittsburgh. Enjoy living and working in a city which provides professional sports teams, a world-renowned symphony, excellent school systems and quality, affordable housing. For information, please contact Kristin Ferguson at: Daniel Stern & Associates, The Medical Center East, 211 N. Whitfield Street, Pittsburgh, PA 15206, Call (800) 438-2476 or fax (800) 892-2781.

Pittsburgh, PA—Internal Medicine/Family Practice. Excellent opportunity for BE/BC internist or family practitioner to join a well-es-

tablished, busy practice. Enjoy two beautiful, modern offices located within very close proximity to the admitting hospitals, join the staff of a major tertiary care teaching institution which has a highly respected internal medicine residency program. Live and work in a major metropolitan city which provides quality, affordable housing, top-rated school systems, and a great variety of recreational activities. Competitive compensation leading to partnership. For more information, please forward curriculum vitae to: Daniel Stern & Associates, The Medical Center East, 211 N. Whitfield Street, Pittsburgh, PA 15206, Call (800) 438-2476 or Fax (800) 892-2781.

MD/DO needed for a well-established and busy multi-doctor chiropractic, nutrition and rehabilitation facility, located in S.W. Pennsylvania. We offer a competitive salary plus full benefit package. Send confidential resumes to Personnel Manager, P.O. Box 455, Greensburg, PA 15601.

Family Practice—Eastern Great Lakes. Thriving practice in a beautiful, small college town, overlooking a pristine lake. Competitively salaried up to \$130K. Call of 1:4. Tertiary hospital with 489 beds. Close to three major metro areas. For details, contact Bernie Wiesemann at (800) 546-0954, ext. 3814, or fax CV to: (314) 726-3009.

IM AND FP—Pittsburgh area: Secure, well-established group, four locations—suburban or semi-rural, good call groups, excellent

Director, Internal Medicine Residency Polyclinic Health System Harrisburg, PA

This thriving 476-bed community teaching hospital offers free-standing programs in general surgery, internal medicine, and family practice. In conjunction with Milton S. Hershey Medical Center, a Pennsylvania State University affiliate, pediatrics, radiology, and orthopedics are also offered.

Why Are We Here?

James D. Balshi, MD

"The punishment of wise men who choose not to participate in government is that they must live under a government of unwise men."

—Benjamin Franklin

Dr. Balshi, a vascular surgeon, is immediate past president of the Northampton County Medical Society. This article is excerpted with permission from the county society's Bulletin. It originated last year as his inaugural speech.

When the Northampton County Medical Society was formed in 1849, medicine was much different. The vast majority of care was delivered in the doctor's office with only a small number of patients requiring hospitalization. Primary care was frequently the *only* care either necessary or available. The county society served an important role for the [region's] medical community—it *was* the medical community. It provided physicians with a forum for interaction and a place to share in education, transfer ideas and information, and mingle with our peers privately. And it provided the community at large with a sense of confidence that high ethical standards were enforced within our profession.

Enter the Technological Revolution. Over the last 70 years, medicine has rapidly found itself "armed to the teeth" with scientific advances capable of curing diseases for the first time.

The office clinic slowly gave way to the intensive support systems provided by the hospitals as our new battleground for the fight against disease. As the venue shifted, a different "medical community" emerged—the hospital medical staff. Here in our "Houses of Mercy," the new, the exciting, the "headline" medicine was happening. Physicians spent more and more of their time in the hospitals interacting with their colleagues.

In time, this led to a sense of allegiance to the hospitals and their medical staffs that slowly replaced the sense of community in the county-wide practice of medicine. The notion of responsibility as a group was emerging in the hospital medical staffs, and this crystallized in the 1960s when a malpractice decision held a hospital and its medical staff liable for negligent care.

Suddenly these organizations took on great importance, and an explosion of committees and subcommittees quickly swallowed up the spare time of hard-working doctors. The monitoring of professional conduct and performance, high ethical standards, and peer review has largely been assumed by the well-organized hospital medical staff.

More recently, managed care and all its siblings scream at us in unison to redesign and redefine the way we practice

medicine. Feeling the need to fight this "new" fire with a "new" fire, we've formed physician organizations in Easton and Bethlehem. Physicians in these medical communities are working together, representing our financial interests and constructing more efficient and cost-effective health care payment systems.

It seems, then, that many of the concerns and needs of physicians are being met by these new "medical communities." Why, then, are we here? Has the county society outlived its usefulness? Has it become another Jurassic Park—vainly trying to preserve the past? I think not.

During this current assault on our profession, we are most vulnerable to rapid change foisted upon us from the outside. We spend so much of our time focused on the "small picture" of the patient before us that it is difficult, if not impossible, to see the "big picture" occurring around us. But it is critical nonetheless.

Whether we agree or disagree with our organized medicine, it all starts with our "grassroots" voice. This society will continue to support our interest politically and offers you the chance to participate.

Also, while we are fractured into many groups and given so many responsibilities—from committee chair to administrative chief to HMO medical director—we cannot lose sight of what our colleagues are doing. The forum where doctors from hospital-based practices, competing office-based practices, and industry-owned clinics can sit down together, communicate, and share a sense of common purpose, must be preserved.

Easton and Bethlehem were once widely separated. Now, "selective contracting" by industry is moving our patients across the valley. We need to know our colleagues in both communities, on and off the playing field. In our unity, there is strength. In our strength, there is better care for our patients.

Finally, we are here (and I hope will continue to be here) to preserve the dignity of medicine. We are not hospitals or PPOs or PHOs or HMOs. We are *not* health care providers. We are doctors. Often alone in a room with our patient, or with an x-ray film or a microscope slide, it is our medical judgment that shapes and directs the lives of our patients. It is not a job—it's an honor. And this society will work to preserve it. ☉

“OK, Tom was right.

After forming our group two years ago, we really shopped around for medical

liability coverage. Not all of us were in favor of the policy from the discount carrier. Especially Tom. He felt the risks of our profession were already high enough, and we couldn't trust just anyone to protect our practice and our reputation. But Liz and I wanted to lower monthly expenses. We honestly thought we'd get the same peer review on claims that PMSLIC offers its policyholders.

Boy, were we misinformed. After Liz was sued, we found ourselves defending her actions to the very people we were paying to defend us. I mean, they're supposed to be on our side, right? I still can't believe how much time we've already spent trying to get our practice back on track. If we had gone with PMSLIC, we wouldn't be in this mess. I wish we had made the right move from the start. I wish we had listened to Tom. ”

TORT REFORM RALLY

January 23, 1996 • Capitol, Harrisburg

See special insert for details, and watch your mail for President's Letter and rally registration materials.

For further information, call (800) 566-TORT.

PPHP ACHIEVES CAPITALIZATION GOAL: The Pennsylvania Physician Healthcare Plan, Inc. (PPHP) has surpassed the break-escrow point of \$16.5 million required to capitalize the organization. PPHP is now moving forward into the next phase of the company's development—the licensure process. The stock offering remains open to permit participation from physicians who have not yet invested, as well as for additional investment from current subscribers. For more information about investing in PPHP—the only physician-owned HMO start-up in Pennsylvania—or for additional copies of the stock offering materials, call (800) 671-7747.

PHYSICIAN GROUPS SUPPORT "PRUDENT LAYPERSON" BILL: The State Society and the Pennsylvania Chapter of the American College of Emergency Physicians (PaACEP) are urging Pennsylvania legislators to protect patients' access to emergency medical care by passing House Bill 1415, known as the "prudent layperson" bill. Representative John Lawless (R-Montgomery) is the bill's chief sponsor. Opposed strongly by insurance interests, House Bill 1415 is now on the House calendar. For additional information, call PaACEP at (800) 228-7823 or (717) 558-7750.

WESTERN BLUE CROSS AND PA BLUE SHIELD AGREE TO CONSOLIDATE: The 300-person corporate membership of Pennsylvania Blue Shield on November 28 voted 163-55 to approve consolidation with Blue Cross of Western Pennsylvania. The boards of directors of both companies gave their approvals earlier in the month. According to a news release issued jointly by both organizations, formal filing for regulatory review was planned for early this month, with the intention of starting to consolidate operations in early 1996. The Society's House voiced several concerns about the merger at its October meeting. For background, see page 11.

SOCIETY DUE CREDIT IN YET ANOTHER MEDICARE VICTORY: The State Society can take at least partial credit for convincing METRAHEALTH of Nanticoke, the Medicare Durable Medical Equipment Regional Carrier (DMERC) for Pennsylvania, to eliminate two newly proposed paperwork requirements. The new forms—the Physician Information Sheet and the Written Confirmation of Physician's Order—were to be implemented on January 1, 1996.

SOCIETY DROPS KEYSTONE FROM MEMBER HEALTH PLAN: The Society will no longer offer Keystone Health Plan Central HMO as part of its member health plan because of Keystone's exclusive agreement with The Reading Hospital and Medical Center. The exclusive agreement forces a number of physicians in the Reading area to either stop seeing Keystone patients or join the medical center's medical staff. The Society offers several other health plan options to members in the Capital Blue Cross region. For additional information, call the Society's Marketing Department at (800) 228-7823 or (717) 558-7750, extension 1497.

PENNSYLVANIA MEDICINE WINS TWO REGIONAL AWARDS:

PENNSYLVANIA MEDICINE won two awards from the Harrisburg Chapter of the International Association for Business Communicators, including a silver award for the writing of "Living the Oath" [December 1994] and a bronze award for overall content and design. This is the third year in a row the magazine was recognized for excellence by the association.

Finding Good in a Year of Concerns

John W. Mills, MD
Medical Editor

With only four years left in this century, the 1995 holiday season should give us cause for a different type of celebration—one of reflection and of thanksgiving.

We have much to be thankful for, not only as individuals, but as physicians, as members of a medical society, and as citizens.

While we know that our medical care is the finest in the world, we've also come to realize that much of our system needs fixed. Congress is trying to address some of the faults, with changes in Medicare and block grants for Medicaid. Doomsayers predict chaos; others predict fiscal strengthening of Medicare and an end to the escalating Medicaid "dole out." No matter our stance, as professionals we should simply be thankful that our government is finally biting the bullet to try to deal with these serious problems in a fiscally responsible manner.

As Pennsylvania Medical Society members, we should be thankful that the House of Delegates did not "let Humpty Dumpty fall off the wall," but chose to loosen the shackles of mandatory AMA membership, and to free PMSLIC to pursue other insurance business in Pennsylvania and other states. No matter how you judge those decisions, know that much soul-searching went into them. We on the Board of Trustees, and I as an individual, look for renewed State Society strength from these actions, a reversal of the membership slide, and increasing success in our "membership driven process."

World peace seems a bit closer as we end this year; for that we are truly thankful. There are still many trouble spots on our globe, but we can be grateful that our leaders are serious in trying to help mediate the issues in these areas.

As individuals, our thankfulness, as well as our problems, are unique to each. I am thankful for my reelection as Ninth District trustee and that the Board of Trustees saw fit to continue my tenure as medical editor for another year—a year of even more changes for our publications. PENNSYLVANIA MEDICINE and *Executive Report* will be amalgamated into a new publication, in an

effort to free up more of our budget for electronic communications with you—our members. We look forward to the continuing challenge of providing you with a current, readable, informative, and compelling publication.

For the lives that have touched mine—patients, office staff, family, colleagues, friends, and special confidants—and for the fulfilling experiences in my life—professional and personal—I am truly thankful.

Some of you know that my life-long wish has been to become certified as a steam locomotive engineer. Just as the art of medicine can't be learned from a book, the art of firing and running a steam locomotive is learned by experience, after becoming thoroughly familiar with the rules and mechanics in the texts.

As I mentioned last month, I did spend a few days in August learning how to fire Engine 2353 of the San Diego Museum in Campo, California. This engine, like many western engines, is an oil burner, used in place of coal burners in an effort to reduce fires along the railroad right of way caused by hot ashes, sparks, and glowing embers. Initially the oil is atomized by compressed air and ignited by a flaming ball of cotton waste (soaked in kerosene) and placed in the fire box. The draft is fully open and, as more oil is added, the fire gradually assumes a roaring, rhythmic beat as it swirls further from the burner and envelopes the whole fire box.

Watching the color of the smoke at the stack is your indication of what the fire is doing—black, too rich; white, too lean. It's a fine-tuning process as the steam pressure builds. The boiler water level must be checked frequently to keep the level between two notches on the "glass." It's much like adjusting insulin in a diabetic or monitoring a complex labor in a pre-eclamptic patient. My greatest thrill to date was signaling with the steam whistle cord—for 2353 has yet to run under its own power and needs many tests yet to be run.

For excellent health which allowed me 43 years of medical practice, and now, in retirement, the opportunity to be steam locomotive certified...I am very thankful. ☉

Now you can be just as sly about
paying your taxes as you've been
about not paying your taxes.

PAY THE TAXES YOU OWE.
call 1-800-2AMNESTY
<http://www.epix.net/homepage/parev>

Pennsylvania

So what's it gonna be?

Are you going to call us or do we have to call you?

Since October the Department of Revenue has been looking the other way so
you'd have the chance to pay your back taxes without penalty.

But Tax Amnesty ends soon.

And when it does, you'll be looking at harsher penalties and tougher enforcement.

Of course, if you come forward now, we'll give you the assistance you
need. We're here to help you.

So while you have the chance, pay what you owe without paying
any penalties and without any questions.

But don't wait too long—

We turn back around after **January 10, 1996.**

Think of it as a second chance.

Or your last.

Tax Amnesty

Policy Needed on Managed Care Referrals

The Lehigh County Medical Society Board of Trustees would ask the Society's Council on Education and Science to please consider issuing a policy statement regarding "Long-Term Postoperative Care of a Patient Between the Primary Physician and the Specialist with Regard to the Managed Care System."

It has been brought to our attention that more and more, the primary physicians are not referring the patient back to the specialist for long-term patient review, even though the primary physician has been advised by the specialist that they must see the patient on a six-month or annual basis.

This referral, if not made, puts the patient and physicians in a very awkward position. If the patient happens to develop a problem two, three, or more years down the road, is the primary physician held responsible or the specialist because they did not see the patient for routine checkups and perform the proper testing? If the primary physician is advised by the patient's insurer that they will not allow the referral to the specialists, are the insurers responsible?

We look forward to your response as this is a growing issue that we must be able to address appropriately.

*Paul H. Schenck, MD, President
Lehigh County Medical Society*

Response:

The letter from the Lehigh County Medical Society about neglected referrals of managed care patients raises not only a legal question, but an ethical question as well: Do physicians' responsibilities to personal remuneration and insurance companies take priority over their obligations to patients?

In the past it has always been a given that physicians would use their medical skills, knowledge, and competence in the best interests of their patients. Currently, however, managed care programs use financial

incentives and disincentives to influence physicians to postpone expensive tests or, as in the Lehigh Valley letter, to avoid consultations in the name of cost containment. Keep in mind that managed care is a system of care designed to shape clinical decisions on the basis of cost containment, not on the basis of patient needs.

The problem started when physicians agreed to being called health care providers. Patients then became consumers or, at best, clients. As a result, medicine became a commodity, open to market forces. The doctor-patient relationship, the soul of medicine, was thereby seriously distorted because physician self-interest was deftly promoted by the insurance industry.

Managed care, however, not only promotes, but legitimizes physician self-interest over obligations to patients' needs. This undermines the quintessential feature of the medical profession: acting in the best interest of the patient and effacing self-interest when it conflicts with patient needs. A physician must not be a double agent, pretending to act in the best interest of patients, while actually acting in the best economic interests of self and the managed care company.

When harm comes to a patient as a result of such duplicity, it must be understood that the physician is inescapably a moral accomplice to the injury. Pennsylvania Medical Society general counsel has said that the gatekeeper-physician is legally responsible if harm comes to the patient. I would add that the gatekeeper physician is also ethically responsible.

The provision of necessary and effective care to the sick is the only gatekeeping role that is not only ethical, but is also obligatory. Cost-containment gatekeeping must be viewed very carefully from the aspect of its impact on patients.

The medical profession has a moral responsibility to stress the primacy of patient needs when discussing cost containment. When any of us reviews

a managed care contract or policy proposal, we should subject it, in its details, to an analysis of what it does to our obligation to patients. We must refrain from limiting access to care, as in not referring to the specialist mentioned in the Lehigh County letter because of economics, ignoring the good of the patient.

Does this mean that physicians have no role at all in cost containment? Of course not! As clinicians, our major contribution to cost containment is the practice of effective and competent medicine. Justice, as well as beneficence, demand that we avoid unnecessary testing, consulting, and treatment.

Justice and beneficence also demand, however, that physicians provide effective, beneficial, and necessary care. This is our sacred duty. If we opt for being responsible to the managed care company rather than to our patients, we will need to confess that we are no longer members of a profession, but rather merely members of a trade association. Are we ready to do that?

*George D. Hanzel, MD
Member, Former Council on
Education and Science*

Editor's note: Members of the former Council on Education and Science agree that this issue is important and anticipate that the newly restructured Council on Health Policy and Advocacy (see page 44) will revisit the issue.

Statement of Accreditation: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education programs for physicians. The Medical College of Pennsylvania and Hahnemann University designates 1.0 credit hour of Category 1 of the Physician's Recognition Award of the American Medical Association for each hour of attendance at these continuing medical education activities.

This program is eligible for 1.0 credit hour for each hour of attendance in Category 2A of the American Osteopathic Association.

House Actions Expand Physician Choices

Compiled by Maria T. Montesano
Assistant Managing Editor

Pennsylvania physicians will have more support in the managed care arena and more choices in their professional affiliations as a result of actions of the State Society's 1995 House of Delegates. At the annual meeting, held October 27-29 in Hershey, the delegates voted to:

- eliminate the AMA membership requirement;
- allow the Pennsylvania Medical Society Liability Insurance Company (PMSLIC) to write insurance for all physicians in Pennsylvania; and
- change the name of the Hospital Medical Staff Section to the Organized Medical Staff Section, and expand its scope.

The more than 265 delegates also took action to help physicians deal with the proposed Blues' merger, managed care and HMO strategies, and other insurance matters, as well as to improve patients' health.

AMA membership

The vote to change the bylaws to eliminate the mandatory AMA membership requirement came early in the afternoon on October 28, with limited debate on the floor of the House.

In 1989, the House instituted the membership requirement primarily as a means of assuring a strong national organization to increase effective physician representation at the national level. The Society reaped several immediate benefits from that move, including additional delegates to the AMA House, financial reimbursement for lost membership, assistance in membership recruitment and retention efforts, and a stronger voice for Pennsylvania physicians at the national level.

Recent survey results prompted the Society's Board of Trustees to reconsider the 1989 action again this year. In a poll conducted for the Society's Membership Driven Process Review Panel, 71 percent of respondents stated that national and county membership should not be mandated. When asked what it would

The Society's House considered 126 reports and resolutions this year at its annual meeting. Among issues debated on the floor of the House: a proposed Blues merger, managed care strategies, and new Society structures. Pictured participating in the House (clockwise, from top left) are: Wilmo C. Light, MD, Westmoreland County, former chair of the Society's Council on Membership; Rhondo S. Renninger, York County executive secretary; William Y. Rioli, MD, Delaware County; and Charles Cutler, MD, Montgomery County.

take to encourage potential members to join the Society, 33 percent said freedom to choose membership with the AMA.

The compelling force of such sentiment was reflected by the strength of the overwhelming House vote.

Following the House vote, a Philadelphia County resolution encouraging the Society to urge physicians to join the AMA on a voluntary basis was passed. The State Society's board also acted to encourage voluntary AMA membership.

PMSLIC market expansion

When PMSLIC was created in 1976, the House of Delegates directed that "Pennsylvania Medical Society membership be stipulated for participation in the company." That requirement was revoked this year when the House voted to eliminate the membership requirement for PMSLIC insurance, allowing the

company to market insurance to all physicians in Pennsylvania.

PMSLIC requested reconsideration of the requirement earlier this year, based on the growing trend in Pennsylvania of physicians forming large groups, often made up of both members and nonmembers. The membership requirement made it difficult for PMSLIC to write insurance for such groups and placed it at a disadvantage to competitors who had no such limitations.

"By allowing PMSLIC to write policies for nonmembers, the insurance company formed and run by physicians will remain viable and strong," says David S. Masland, MD, PMSLIC chair from 1976-1989.

PMSLIC President and chief operating officer Sarah Lawhorne, JD, adds, "This...brings with it an intense challenge. We now are free to provide full liability services to all physicians and other health care professionals in Pennsylvania. The

challenge is to do so in an effective and financially prudent way." PMSLIC remains a wholly owned subsidiary of the Society, and PMSLIC Chair Betty L. Cottle, MD, assures members that PMSLIC will continue to support the goals of the State Society and the value of membership in organized medicine.

In other action, the House voted to allow PMSLIC to offer malpractice insurance coverage to physicians in other states. Resolution 606 was introduced by Philadelphia County in response to the increasing trend of physician networks to extend across state boundaries.

OMSS changes

Following the lead of the AMA House in June, State Society delegates unanimously approved bylaws language to change the name of the Hospital Medical Staff Section (HMSS) to the Organized Medical Staff Section (OMSS).

The action expands the section's representation to include organized medical staffs of other health facilities and emerging delivery systems, such as physician hospital organizations (PHOs), managed care organizations (MCOs), independent practice associations (IPAs), physician organizations (POs), staff model HMOs, and preferred provider organizations (PPOs).

New structures

In other policy moves, the House approved a new council and committee structure for the State Society (see chart and explanation, page 44); and referred for further study recommendations of the Ad Hoc Committee on House Representation that would expand section, specialty, and group practice representation in the House. Debate on the latter focused on whether added delegates would solve the representation problem, and, if so, what number of added delegates would be fair.

CAT Fund Director John H. Reed, JD, talked to delegates at the first session of the House about the 1995 emergency surcharge. Reed, new to the fund this year, says though the fund did not change in the past to meet tort system increases, "it still is the cheapest insurance mechanism for doctors and hospitals in Pennsylvania and the U.S."

Blues' merger

On November 28, the 300 corporate members of Pennsylvania Blue Shield were to consider whether to merge with Blue Cross of Western Pennsylvania.

Of major concern to physicians is the potential for such an entity to decrease competition in Pennsylvania, and the diminished role that physicians and other health care providers will play in the governance of the proposed organization.

The State Society has long advocated competition in the marketplace as being better for physicians and their patients. As for the governance issue: Currently, Blue Shield's board comprises 50 percent providers; the proposed board of the new entity is 25 percent representation—12.5 percent from Western Pennsylvania, and 12.5 percent from Central and Eastern Pennsylvania.

The House of Delegates approved three immediate State Society actions to address these and other concerns about the proposed merger:

1) send letters to the members of Blue Shield Corporation outlining our major concerns;

2) ensure that the proposed merger conforms to the requirements of the PBS Enabling Act and other pertinent legislation; and

3) seek 50-percent provider representation on the board, that the chair of the board be a physician, and that at least 50 percent of the corporate membership be elected by general ballot of participating physicians in Pennsylvania as is current Blue Shield policy.

Letters outlining our concerns were mailed on November 9. For an update of the November 28 action, see "late news at press time" on page 4.

Managed care strategies

Ever apparent in medicine is the growing trend toward managed care as more and more physicians "sign on" in an effort to survive in the changing marketplace. As reported last month in PENNSYLVANIA MEDICINE, the need to maintain physician control of medicine becomes more apparent as well. To address HMO problems that continue to arise for physicians, the House directed the Society to:

- encourage continued and increased use of uniform credentialing, and to work with PMSCO to offer credentialing assistance to members;
- support AMA efforts to modify ERISA (Employee Retirement Income Security Act) provisions regarding negligent utilization review decisions, retroactive changes to health care benefits, and lack of preventive services;
- assure that physicians cannot lose hospital privileges for not participating in a hospital's PHO;
- adopt policy to ensure that selective contracting decisions made by any health delivery or financing system are based on multiple criteria related to professional competency, quality of care, and the appropriateness of medical services provided;
- oppose HMOs assigning physicians to new products without written consent of the physicians;
- ask the AMA to petition Congress to consider a rule allowing portability from state to state of medical savings accounts;
- adopt AMA policy seeking to prohibit third-party payers from →

Society Dues Unchanged in '96

The House of Delegates voted not to increase State Society dues in 1996, making it the sixth year in a row dues are set at \$430 for the full-dues membership category. Young Physicians Section graduated dues and dues for other categories of membership remain unchanged as well. As in the past, \$10 of the assessment will be given to the Society's Educational and Scientific Trust.

paying a global fee to hospitals, which include physician fees;

- seek state and federal legislation mandating the payment of medical education funds to be "passed through" to teaching facilities, and urge a corresponding change in federal Medicare and Medicaid guidelines; and

- work with the Department of Aging to resolve the problem of nursing home patient access to physician care due to inadequate physician compensation by managed care organizations.

In other insurance matters, the Society will:

- work to prohibit Pennsylvania Blue Shield from requiring physicians who participate in Blue Shield's Par Doctor Network, but not in other Blue Shield networks, to accept the par doctor reimbursement as payment in full for treating patients in the other networks;

- ask the AMA CPT Department of Coding and Nomenclature to develop additional guidelines to address specific "unusual" situations that develop when using the evaluation and management codes; and

- request that the Department of Public Welfare include payment for services with the Explanation of Medical Benefits.

Patients' health

Patient advocacy remains a strong priority for physicians. This was manifested at the annual meeting in discussion concerning HMO restrictions on maternity hospital stays.

The Society's House voted to support the policy that discharge of mothers and babies be on the advice of their physicians and consistent with the policies of the American Academy of Pediatrics and the American College of Obstetricians and Gynecologists, which currently allow for coverage up to 48 hours following vaginal delivery and 96 hours for cesarean section delivery. Compensation by third-party payers should also be consistent with the length of stay, according to the House.

This vote follows the lead of the AMA House, which in June received national headlines for similar action. The State Society House also directed the Society to seek state legislation to insure these rights and pursue implementation of the policy through

the state Departments of Health and Insurance.

The delegates further discussed what steps to take to eradicate smoking in Pennsylvania. They decided first to develop model legislation that would ban the use of tobacco in restaurants and lobby for passage of such legislation. Many delegates testified that the Society must take a leadership position on the issue because of the recognized danger of second-hand smoke. They were encouraged that similar legislation was signed into law in New York state earlier this year.

The delegates also directed the Society to write two letters: 1) to President Clinton, supporting his efforts to address the problem of increased tobacco use among young people; and 2) to Congressional leaders, asking them to support the administration's efforts.

Other patient health-related resolutions adopted by the House call for the Society to:

- advocate needle exchanges as a means of AIDS and hepatitis control, and
- write federal legislative leaders to ask that current clean air and water legislation be maintained *at least* at its present level "to preserve the good health of our citizens."

Other action

In other action, the House directed the Society to: 1) submit a resolution to the AMA urging federal action to lift the financial burden from physicians of providing sign language interpreters for deaf patients, as directed by the American with Disabilities Act; and 2) write to the AMA Council on Ethical and Judicial Affairs requesting that the restriction prohibiting physicians from accepting medication samples from

pharmaceutical companies for their immediate families or themselves be lifted for cases where the medication is prescribed by another physician, and that such sample acceptance be considered a matter of professional courtesy.

For a complete list of resolutions and corresponding House actions, turn to page 17.

Robert J. Lilley, the Society's associate director of professional relations, contributed to this article.

FORUM EASES ANXIETY OF CHANGING TRENDS

Daily in the practice of medicine, and monthly in this publication, physicians are reminded of the changing trends of health care and the move toward managed care. But these trends are not necessarily bad, according to Roger F. Mecum, the Society's executive vice president.

"Managed care is an evolutionary process...It is not a destination, but an enduring process of defining how health care will be delivered," he told physicians at a special forum, "Localizing Health Care—Managed Care Anxiety Is Treatable," held in conjunction with the annual business meeting. And he reminded the physicians that "with this trend comes the opportunity to take the lead and bring added value to the managed care equation."

Joining Mecum as presenters were Sarah Lawhorne, JD, president and chief operating officer of the Pennsylvania Medical Society Liability Insurance Company (PMSLIC), and Michael P. Lance, chief executive officer of the PennMed Member Services Company (PMSCO). Lawhorne discussed the creation of Infinity Management

The State Society and its subsidiaries are taking steps to ease the anxiety of medicine's changing trends, as evidenced at a special forum held during the 1995 annual meeting. Fielding questions were Michael P. Lance (left), chief executive officer of the Society's newest subsidiary, PMSCO, and Sarah Lawhorne, JD (right), president and chief operating officer of PMSLIC.

Services, a subsidiary of PMSLIC created to develop new risk management products and services, to help the company stay competitive in this changing environment. Lance explained that PMSCO's main goal is to help physicians "transition" into the managed care environment.

A question-and-answer session, moderated by PMSCO Chairman of the Board Michael J. Prendergast, MD, concluded the program. Among audience concerns: antitrust issues and survival in the ever-changing market.

MANAGED CARE, TECHNOLOGY DISCUSSED BY SECTIONS

Sixty Organized Medical Staff Section (OMSS) representatives attended the section's annual meeting on October 26 to discuss such issues as the appropriate response time to ICU/CCU admissions for rural hospitals, the oversupply of specialists, mandatory managed care for the elderly, re-engineering of the medical staff, and verbal orders. Attendees also heard a presentation on CME and managed care.

The assembly considered five resolutions: Three were adopted by the section and submitted to the AMA-OMSS this month; two were referred to the section's Governing Council. The meeting concluded with a four-hour seminar, "Improving Your Practice Efficiency with Electronic Technology."

Elected officers and members of the OMSS Governing Council include: John A. Malcolm Jr., MD, secretary; Wilma C. Light, MD, delegate; George R. Green, MD, alternate delegate; and Robert S. Pyatt Jr., MD, member-at-large. Jitendra M. Desai, MD, was elected organized medical staff trustee.

Young Physicians Section

The Society's Young Physicians Section (YPS) also met during the Society's annual meeting. Thirty-five young physicians attended the Ninth Assembly of the YPS on October 26.

Jill B. Cohen, DO, Philadelphia County, was one of seven delegates speaking on behalf of Pennsylvania resident physicians at this year's annual meeting. She was newly elected secretary of the Society's Resident Physician Section at its October 27 meeting.

The day-long assembly began with a business meeting, where young physician members agreed to support the elimination of the membership requirement to purchase liability insurance from PMSLIC. Several resolutions considered dealt with managed care issues, and the section sent nine resolutions on to the House of Delegates.

The afternoon educational session, also devoted to managed care, featured a panel of five managed care experts who discussed various aspects of the current marketplace. Among the panelists: Michael P. Lance, CEO of the PennMed Member Services Company; Anthony Ardire, MD, MPH, of U.S. Healthcare; Dwaine Hartline of Hershey Foods Corporation; and Anthony Coletta, MD, and Howard Peterson of Founders Health Care, Inc.

Elected officers of the YPS Governing Council are: William J. West Jr., MD, chair; Martin D. Trichtinger, MD, vice chair; Michael S. Heinle, MD, secretary; and Robert M. McNamara, MD, trustee representative.

Also serving the section are: Mark P. Downey, MD, Stuart Gitlow, MD, Chad D. Killas, MD, and Marlon T. Maus, MD, delegates; and Carol A.

Bilinski, MD, Todd H. Goldberg, MD, Lorrie Loreman, DO, and Charles Zaleski, MD, alternate delegates.

Resident Physician Section

Marvin Gozum, MD, director of the Center for Research in Medicine and Health Care, and Patricia Hoffmeir of Gilbert Tweed Health Search, led the educational portion of the Resident Physician Section (RPS) meeting, held on October 27. The focus was the future of practice/emerging careers of medicine.

Newly elected officers are: Eric J. Gertner, MD, chair; Jerome S. Schroeder, MD, vice chair; and Jill B. Cohen, DO, secretary. Robert R. Corrato, MD, was newly elected resident trustee, and Stuart Gitlow, MD, MPH is past chair.

Also serving the section are: Jennifer E. Trottman, MD, Jonathan M. Kroser, MD, Patricia A. Graham, MD, Stephen Parker, MD, Alison J. Alexander, MD, Steven C. Thornquist, MD, John D. Paletta, MD, and Joyann A. Kroser, MD, delegates; and Maria E. Simbra, MD, Srinivas R. Nalamachu, MD, Elizabeth H. Sinz, MD, and Bradley D. Stein, MD, alternate delegates. Dr. Parker also serves the board of the Pennsylvania Medical Political Action Committee (PAMPAC).

Medical Student Section

Forty medical students attended the Medical Student Section assembly, held on October 21 at Hahnemann University in Philadelphia. Sharon Orłowski, the Society's director of managed care business strategies and special projects, spoke at the educational program, which focused on current trends in the medical marketplace.

Glen J. Barbee was elected chair of the section, and Kenneth S. Kurtz was elected student trustee. Kenneth W. Anderson is past chair. Also serving the section are: Amy K. Imro, alternate delegate; and Heather L. Orman, Christina T. DeAngelis, James R. Baer, Jean-Jacques Rajter, James T. McCormick, Aditva Arora, and Albert Peng, members-at-large.

In other business, the students established a new committee structure and assigned committee members to begin working on specific issues. For more information, contact the section at (800) 228-7823 or (717) 558-7750. →

ANNUAL MEETING STATS

The following county medical societies reported 100 percent attendance at the Society's annual meeting: Beaver, Berks, Blair, Bucks, Cambria, Chester, Clinton, Columbia, Cumberland, Delaware, Erie, Franklin, Indiana, Lackawanna, Lancaster, Lawrence, Lehigh, Montgomery, Northumberland, Philadelphia, Schuylkill, Somerset, Union, Venango, and York.

ACTIONS OF THE BOARD OF TRUSTEES

STAFFS ENCOURAGED TO USE EXCLUSIVITY LANGUAGE

With the growing trend toward managed care, more and more hospitals may be trying to sign exclusive contracts with physicians. The Society's board at its October meeting agreed to encourage medical staffs to amend their bylaws to incorporate model language developed by the Society regarding exclusive contracts.

This language ensures medical staff involvement in the hospital's decision to engage in an exclusive contract and protects the rights of physicians whose clinical privileges would be impacted by the contract. Following is the Society's model language:

Exclusivity Policy

(a) An exclusivity policy adopted by the board, including one adopted in anticipation of or pursuant to an exclusive contract, which is otherwise lawful, may limit designated clinical privileges or access to hospital resources to individuals granted exclusivity in the policy, provided the following conditions are met:

(1) The policy is reasonably necessary to ensure quality care and is the least restrictive alternative, (2) prior to adoption of the policy, there was meaningful consultation with the medical staff as to the reasons for and less restrictive alternatives to the exclusive arrangement and as to the effect of the arrangement on present and future members, and

(3) any individual whose existing clinical privileges would be affected by the adoption of the policy was given a fair and reasonable opportunity to be included in those individuals granted exclusivity.

(b) The board may implement an exclusivity policy permitted by paragraph (a) of this subsection by revoking or imposing access restrictions on the existing clinical privileges of a practitioner.

Medical necessity

The board also agreed to support the definition of "medical necessity" proposed by the Pennsylvania Academy of Family Physicians, as well as legislation that uses that definition as the basis for utilization and peer review decisions made by third-party payers.

According to the academy, "medical necessity" means, "diagnostic or therapeutic care, services, or treatment reasonably expected to improve, restore, or prevent the worsening of any illness, injury, disease, disability, defect, condition, or the functioning of any body member." The definition also qualifies who provides the treatment and how.

Other business

In other business, the board:

- approved a recommendation that the Society support legislation creating a modified formula for PACE (Pharmaceutical Assistance Contract for the Elderly), providing that formula is designed by a body in which the Society actively participates, and further directed that the process provide for exceptions to allow override of therapeutic substitution elements of the formula; and
- endorsed the recommendation of the Centers for Disease Control and

Prevention (CDC) and Pennsylvania Department of Health that HIV testing be encouraged for all pregnant women, so those testing positive can receive AZT to reduce the chances of HIV transmission to infants. The Society is preparing a statement on the issue.

Reorganization

At a reorganizational meeting following the adjournment of the 1995 House of Delegates on October 29, the board re-elected John W. Lawrence, MD, chair, and James R. Regan, MD, vice chair. Dr. Lawrence, Second District, returns as chair for his fourth term; Dr. Regan, Interspecialty Section, returns as vice chair for his second term. Also, Robert L. Lasher, MD, Eighth District, was newly elected secretary of the board, replacing Ferdinand L. Soisson Jr., MD, Eleventh District, who served in the position for six terms.

Election Results

The State Society House of Delegates elected the following new officers and delegates during its October 1995 meeting:

President: Jonathan E. Rhoads Jr., MD, York County

President Elect: Victor F. Greco, MD, Luzerne County

Vice President: Lee H. McCormick, MD, Allegheny County

Speaker of the House: Howard A. Richter, MD, Delaware County

Vice Speaker of the House: Donald H. Smith, MD, Northampton County

New Trustees:

Jitendra M. Desai, MD, Organized Medical Staff Section
Robert R. Corrado, MD, Resident Physician Section
Kenneth S. Kurtz, Medical Student Section

Delegates to the AMA:

Donald C. Brown, MD, Westmoreland
Ronald J. Clearfield, MD, Westmoreland
James L. Cristol, MD, Philadelphia
Donald G. Ferguson, MD, Allegheny
George R. Fisher III, MD, Philadelphia
Robert L. Lasher, MD, Erie
William H. Mahood, MD, Montgomery

Robert N. Moyers, MD, Crawford
Michael J. Predergast, MD, York
Robert D. Reinecke, MD, Philadelphia
Jonathan E. Rhoads Jr., MD, York

Alternate Delegates to the AMA:

Richard T. Bell, MD, Berks
David L. Cohen, MD, York
Charles Cutler, MD, Montgomery
William S. Frankl, MD, Philadelphia
Jay L. Funkhouser, MD, Beaver
Mary J. Hudak, MD, York
William W. Lander, MD, Montgomery
Lewis T. Patterson, MD, Dauphin
James G. Pitcavage, MD, Allegheny
Carol E. Rose, MD, Allegheny
Stephen L. Schwartz, MD, Philadelphia

Alternate Delegate, Resident:

Jennifer E. Trotman, MD, Montgomery

Alternate Delegate, Student:

Amy K. Imro, Philadelphia

Committee to Nominate Delegates and Alternates to the AMA:

Arthur V. Stein, MD, Lehigh

Judicial Council:

Betty L. Cottle, MD, Blair
Harry V. Armitage, MD, Delaware

Leaders Urge Action on Challenges to Medicine

Each year during the first session of the House of Delegates annual business meeting, the president and president elect offer their views on the state of medicine. In excerpts of this year's speeches, outgoing President John H. Hobart, MD, and incoming President Jonathan E. Rhoads Jr., MD, urged the Society and Pennsylvania physicians to take actions that challenge the status quo.

In his speech to the House, outgoing President John H. Hobart, MD, gave his support to elimination of mandatory AMA membership and to removal of the membership requirement for PMSLIC insurance. Both actions were passed by the House (see page 10).

But he focused on the challenges for tort reform and CAT Fund control. All Pennsylvania physicians should strongly urge passage of House Bill 2122, the Society-endorsed major tort reform measure introduced by Representative J. Scot Chadwick (R-Bradford) in October. Dr. Hobart said:

"You will have, in the weeks and months ahead, the opportunity to put your shoulder to the wheel and get tort reform moving in Pennsylvania. I urge you to respond quickly to calls from our legislative council and staff."

But first, and more importantly, go home and cultivate your state legislators like a bunch of delicate roses—and urge your colleagues to do the same. The groundwork you lay, and your future commitment to legislative action, will determine our success or failure."

He noted that:

- Forty-three cents out of every dollar spent on the health liability system goes to injured patients.
- Eighty-three percent of all Americans believe that the present liability system has problems and should be improved.

Dr. Hobart further outlined steps unanimously agreed upon by the board—to request a meeting with the governor, and publically relay our concerns about CAT Fund emergency and 1996 surcharges—and summarized the Society's stance regarding the CAT Fund and tort reform.

He said, *"When the House of Delegates meets again in 1996, I sincerely hope it will be to celebrate a*

victory for tort reform in Pennsylvania."

Provisions of the House Bill 2122 are outlined on page 20. Contact the Society's Department of Governmental Affairs at (800) 228-7823 or (717) 558-7750 for information about how to get involved.

Dr. Hobart pointed to the Society's efforts in the area of managed care as another important focus of resources.

Recommendations of the president

Incoming President Jonathan E. Rhoads Jr., MD, made several recommendations as part of his inaugural address at the annual meeting of the House of Delegates:

1) *That AMA Policy 435.968 be included in the Society's tort reform proposals—The policy states that "failure to perform a marginally useful diagnostic test in the interest of cost containment shall constitute a valid defense against suit for not performing the test." Including it in Society efforts would help eliminate the expenses of defensive medicine, according to Dr. Rhoads. He says proposed reforms are not strong enough to stop defensive medicine.*

2) *That the Society provide the members of the House with "cue cards" detailing the Society's successes and its value to members—Society membership has been essentially flat for several years, and Dr. Rhoads says, "It is incumbent upon each of us to recruit new members."*

3) *That the Pennsylvania Medical Society plan to have a modest dues increase for the 1997 year—"Dues have not been raised for six years. Sooner or later, a dues increase will be necessary," Dr. Rhoads says. He advocates small, regular dues increases to keep up with inflation, instead of large, catch-up dues increases.*

4) *That it be the position of the State Society that in a merged Blue Cross/*

→

"As we confront external forces which attempt to change how medicine is practiced, it is obvious that physicians must stand together and very badly need organizations with clout that can represent us. In Pennsylvania, that organization is the Pennsylvania Medical Society. At the national level, it is the American Medical Association."

At the same time, it is imperative that physicians set aside our petty differences and focus on the greater benefits which will accrue from achieving our common goals. Unity in the profession is of paramount importance. It is very clear that medical care in our country can currently do more for the sick and injured than ever before, but it is ironic that the hassles for physicians to do our best work are continually growing, and the emoluments for physicians are being eroded in the interest of cost containment."

—Jonathan E. Rhoads Jr., MD,

"Perhaps we sometimes take medicine for granted," according to President John H. Hobart, MD (right), receiving a presidential award from Board Chair John W. Lawrence, MD. "I think there is some value for all of us to take just a moment to acknowledge what a wonderful profession it is."

Blue Shield health insurance company, the board of directors be 50 percent providers, the corporate board be 50 percent providers, and the chairman of the board be a physician—Blue Shield is in active merger negotiation with Blue Cross of Western Pennsylvania, and the proposal calls for 25 percent providers on the board and corporate board. This is a looming change from Blue Shield's current board, made up of 50 percent providers, with a physician chairman (see page 11).

5) That the Society develop a definition of peer review which may be used in state laws and regulations affecting medicine, and that the Society work to have the costs of reconsideration of appeals paid for by parties other than physicians—The workers' compensation law continues to be a problem for a number of physicians. Dr. Rhoads says, "One orthopedic practice in my community currently has 1,000 appeals out against workers' compensation carriers regarding their utilization review and reimbursement decisions. [These physicians] find the definition of peer review in the law to be inadequate."

6) That the Commission on Continuing Medical Education study the value of stating educational objectives and of evaluations of speakers who have a single period of education in a program such as a lecture, and seek ways to reduce the paperwork required to sponsor Category 1 accredited programs—The application of guidelines has led to increasing requirements for paperwork for Category 1 continuing

education programs which are becoming burdensome, according to Dr. Rhoads.

7) That the Society ask the AMA to petition HCFA to reimburse home health agencies on the RBRVS, similar to the way physicians are reimbursed—"I am informed that payments for home care by home health agencies are large compared to payments for house calls by physicians," Dr. Rhoads says.

8) That the bylaws be amended so that appointees be nominated 60 days prior to the House of Delegates—Designed to resolve recurring timing problems. [Editor's note: The House amended and approved this recommendation that appointees be nominated 30 days prior to the House of Delegates.]

"Think of us as running interference for you, so you have the freedom and authority to make the kinds of decisions that are best for you, your practice, and your patients."

—John H. Hobart, MD

"Now is the time for physicians to seek meaningful medical tort reform with vigor and energy. It will require an extensive grassroots activity on the part of many physicians to accomplish it. The representatives and the senators must be lobbied by individual physicians, as well as by our professional lobbyists."

It will be incumbent upon every member of this [Society] not only to be in touch with their representatives and senators, but to encourage their colleagues to do so as well. Without a strong grassroots effort at tort reform, we cannot expect any relief."

—Jonathan E. Rhoads Jr., MD, in his House speech. As follow-up, he reminds physicians that communication with legislators should be professional and dispassionate—ask for help and support during this difficult time in medicine.

Resolutions Before the 1995 House of Delegates

This is an overview of actions from the October 27-29 annual meeting in Hershey.

Bylaws

- 95-101: Deunification from the AMA.** Calls for elimination of AMA membership requirement, and encourages physicians to join on a voluntary basis. *Adopted.*
- 95-102: AMA Bylaws Prohibiting Discrimination on the Basis of Sexual Orientation for Membership in the AMA or Any of its Constituent Associations.** Calls for bylaws amendment to prohibit discrimination on the basis of sexual orientation, bringing the Society in line with the AMA and other societies which already have such amendments. *Referred to the board.*

Education and Science

- 95-201: Physician Appeals Mechanism for Denial of Academic Appointment.** Calls for an appeals process to be created and stipulated in medical school or university bylaws for physicians who have lost academic appointments that serve as a prerequisite for hospital medical staff privileges. *Not adopted.*
- 95-202: AMA Policy Regarding Medication Samples for Physicians.** Would allow acceptance of samples for self and family when medication is prescribed by another physician. *Substitute resolution adopted as amended.*
- 95-203: Interpretation of the Americans with Disabilities Act.** Calls for the Society to seek clarification of requirements of the law. *Substitute resolution adopted.*
- 95-204: Financial Incentives for Autopsies.** Calls for Society to affirm importance of autopsies, and opposes the use of any financial incentives for physicians who acquire autopsy clearance. *Adopted.*
- 95-205: Physicians' Health Programs.** Calls for continued support of the PHP, especially support of the PHP committee's decision to take all necessary steps to preserve the confidentiality of the program, and to oppose efforts by the Bureau of Professional and Occupational Affairs to require disclosure of names or records of present or past participants, or any data which could result in identification of a specific participant. *Adopted.*
- 95-206: Inappropriate Functioning and Treatment of Non-Physician Providers.** Calls for public education campaign, advocacy with third-party payers, and legislation regarding nurses functioning as physicians. *Not adopted as business of the House.*

Managed Care

- 95-301: Hospital Economic Credentialing.** Supports Society's current policy. *Not adopted.*
- 95-302: Medicare/Medicaid HMO.** Calls for the AMA to study the Family Care Network and similar managed care programs, with regard to physicians receiving a fee for functioning as "gatekeepers" absent involvement of an insurer, and to oppose Congressional efforts to change Medicare and Medicaid until these studies have been analyzed. *Referred to the board.*

- 95-303: Creation of Clearinghouse for Review of Entities Representing Themselves as Multi-State Networks of Physician Providers.** Calls for the Society to play this role and petition AMA to do the same. *Substitute resolution adopted.*
- 95-304: Managed Care Organizations' Policies Regarding Medical Staff Privileges.** Calls for Society and AMA to work toward standardized policy for managed care organizations so that a full scope of privileges is not required for primary care physicians to be credentialed in a managed care organization. *Adopted as amended.*
- 95-305: Involuntary Assignment to HMO Panels.** Calls for Society to strongly oppose involuntary assignment of physicians to new HMO products, new HMO panels, and new services, without the express written consent of the physician in advance, and to oppose any coercion regarding such assignment. *Adopted as amended.*
- 95-306: Managed Care Organizations' Policies Excluding Physicians Who Practice Medicine on a Part-Time Basis.** Calls for efforts to remove the full-time, 20-hour-per-week, direct patient care requirement in managed care programs, especially for academic physicians who practice part time in research, teaching, or administration. *Adopted as amended.*
- 95-307: Prudent Layperson Definition of an Emergency.** Defines "prudent layperson"; directs the Society to incorporate the definition into its position statements regarding health care and seek legislation requiring health care insurance entities to use the definition in reimbursing for emergency services. *Adopted.*

Tort Reform/Legislation

- 95-401: Reform of Tort Inflicted upon a Physician in a Frivolous Suit.** Calls for publishing of names of the plaintiff's attorney, with statements from court about the cause of damages to the acquitted physician. *Not adopted.*
- 95-402: Medical Savings Accounts.** Calls for governing of such accounts to remain with the state in which they were established, unless the individual elects to change the state of registry, and calls for AMA adoption of same policy. *Adopted.*
- 95-403: Smoking Ban in Restaurant.** *Re-referred to the Reference Committee on Public Health as Resolution 95-707.*
- 95-404: Physician Financial Interest in Nursing Homes.** Calls for public disclosure of such interest and allowing physicians with financial interests to attend patients only in designated underserved areas. *Referred to the board.*
- 95-405: Insurance Company Reimbursement for Hospitalization.** Seeks enactment of legislation requiring insurance companies to initially reimburse for entire hospitalization and then resolve conflicts at a later time. *Not adopted.*

→

- 95-406: Managed Care Reimbursement for Nursing Home Patients.** Seeks enactment of legislation requiring that managed care organizations reimburse physicians at Medicare rates for nursing home care. *Substitute resolution adopted.*
- 95-407: Workers' Compensation Costs.** Calls for dialog with the Chamber of Commerce of Pennsylvania and the Department of Labor, Bureau of Workers' Compensation, to develop practice parameters or guidelines which will enable physicians to more effectively evaluate patient disability and return them to the workforce as soon as possible. *Referred to the board.*
- 95-408: Cost Effectiveness of Governmental Health Care Cost Containment Activities.** Calls for policy that all governmental health care cost containment activities should simultaneously evaluate and report publicly the total costs associated with their activities. *Not adopted.*
- 95-409: CAT Fund.** Calls for Society to study the advisability of increasing the basic malpractice insurance levels. *Not adopted.*
- 95-410: Increased Tobacco Use Among Young People.** *Re-referred to the Reference Committee on Public Health as Resolution 95-705.*
- 95-411: Preservation of Clean Air and Clean Water Legislation.** *Re-referred to the Reference Committee on Public Health as Resolution 95-706.*
- 95-412: Medicare Funding.** Calls for letters to majority and minority leaders of the House of Representatives and Senate, asking them to reduce the proposed \$270 billion savings in Medicare spending to a lower, more realistic figure that won't hurt low-income elderly and won't cause providers to severely ration care. *Not adopted.*
- 95-413: Medical Education Pass-Through.** Seeks state and federal legislation mandating the payment of medical education funds to be "passed through" to teaching facilities, and urges a corresponding change in federal Medicare and Medicaid guidelines. *Adopted.*
- 95-414: CAT Fund Legal Action.** Seeks to educate physicians regarding related litigation. *Substitute resolution adopted.*
- 95-415: CAT Fund Emergency Surcharge—Failure to Pay—What Happens?** Calls for the Society to support HB 2122, Periodic Payment of Future Damages. *Adopted.*

Third-Party Reimbursement

- 95-501: Physician Reimbursement Within Hospital Diagnosis Related Groups (DRGs).** Calls for opposition to any efforts by third-party payers, such as those being made currently by Blue Cross of Western Pennsylvania, to incorporate payment for physicians' patient care services as part of the hospital payment. *Adopted as amended.*
- 95-502: Department of Public Welfare Include Payments with Explanation of Medical Benefits**

(EOMBs). Would request a change in policy of the Department of Public Welfare and other insurers to include the compensation payment with the Explanation of Medical Benefits (EOMB). *Adopted.*

- 95-503: New Medicare Documentation Guidelines for Evaluation and Management (E/M) Services.** Calls for letters to HCFA, the AMA, the chair of the Pennsylvania Medical Carrier Advisory Committee, and state legislators, strongly opposing any implementation of the guidelines. *Not adopted.*
- 95-504: Blue Shield Provider Agreements.** Calls for Society to take appropriate action, through the insurance commissioner and the secretary of health, for Pennsylvania Blue Shield to abide by the Enabling Act and not extend provider agreements to non-participating physicians in specific preferred provider organizations (PPOs) or preferred physician programs (PPPs). *Substitute resolution adopted as amended.*
- 95-505: Maternity Hospital Stay.** Calls for Society endorsement and legislative action on policy that every pregnant woman have the option of up to 48 hours hospital stay following vaginal delivery and 96 hours following Cesarean section delivery. *Adopted as amended.*
- 95-506: Revision of Evaluation and Management Codes.** Calls for Society and AMA to ask CPT Department of Coding and Nomenclature to develop policy, rules, and guidelines to handle unusual situations (i.e., multiple small problems at one visit, one extraordinary component, incomplete initial visit) so they can be easily coded. *Adopted.*
- 95-507: Pennsylvania Blue Shield/Blue Cross of Western Pennsylvania Merger.** Calls for Society to send informational letters to the members of the Blue Shield Corporation which outline various concerns with the merger, and seeks an opinion from the various governmental agencies regarding the merger. *Adopted as amended.*
- 95-508: Reimbursement for Dementia.** Calls for Society and AMA to petition HCFA regarding the reduction in reimbursement for psychiatric services rendered when dementia is the diagnosis. *Substitute resolution adopted.*
- 95-509: Precertification Process.** Calls for Society to set policy and propose legislation regarding preauthorization and timely reimbursement for related services. *Adopted.*

Communications/Membership/Administration

- 95-601: Pro-Rated New Member Dues.** Calls for AMA to adopt on a pilot basis a policy similar to that of the Pennsylvania Medical Society for a monthly pro-rata dues bill for the first year of membership. *Referred to the board.*
- 95-602: Time of House of Delegates Meeting.** Calls for annual meeting of the Pennsylvania Medical Society to be held in March or April, beginning in 1997. *Referred to the board.*

- 95-603: Restructuring the Pennsylvania Medical Society Board of Trustees.** Calls for speaker of house to appoint a representative ad hoc committee to study and recommend changes on the structure of the Pennsylvania Medical Society Board of Trustees to make representation more appropriate, and report back at the next House of Delegates meeting. *Not adopted.*
- 95-604: Pennsylvania Medical Society Membership as a Requirement for PMSLIC Malpractice Insurance.** Calls for PMSLIC insurance to be given to all physicians in a large (to be defined) group practice if at least: a) 50 percent of that group are Pennsylvania Medical Society members; or b) a defined percentage in that group, depending on the number of physicians in the group, are Pennsylvania Medical Society members. *Adopted board report and recommendation of the president in lieu of Resolutions 95-604 and 95-605.*
- 95-605: Authorizing PMSLIC to Offer Malpractice Insurance Coverage to Health Care Professional Providers Other than Physicians.** Calls for same. *Adopted board report and recommendation of the president in lieu of Resolutions 95-604 and 95-605.*
- 95-606: Authorizing PMSLIC to Offer Malpractice Insurance Coverage in States Other than Pennsylvania.** Calls for offering PMSLIC insurance to members of other state medical societies. *Adopted as amended.*
- 95-607: Fiscal Note.** Calls for resolutions to the Society and the AMA to be accompanied by a fiscal note generated by staff in consultation with the author. *Adopted as amended.*
- 95-608: Conflict of Interest.** Calls for Society policy that physicians who intend to provide input regarding the formulation of policy within any organ of organized medicine precede their comments with a disclaimer (oral or written) regarding the potential for any conflict of interest they may have which could affect the recommended policy position. *Substitute resolution adopted.*
- 95-609: Employed Physicians Section.** Calls for creation of such a section and for giving a representative from this body a voting seat at the House of Delegates of the Pennsylvania Medical Society, much as the Young Physicians Section and the Organized Medical Staff Section are so organized. Calls for similar structure at AMA. *Referred to the board.*
- 95-610: Enforcement of Graduated Dues Discount.** Requests that counties not in compliance with Society policy come into compliance. *Substitute resolution adopted.*
- 95-611: New Products.** Calls for Society to develop new products—computer, insurance, training—to help physicians cope with the current marketplace. *Adopted.*
- 95-612: CAT Fund Legal Action.** *Re-referred to Reference Committee on Tort Reform/Legislation as Resolution 95-414.*
- 95-613: Electronic Participation.** Calls for the Society to study use of electronic online services for annual

meeting business, and proposes pilot project in 1996. *Referred to the board.*

- 95-614: AMA Bylaws Prohibiting Discrimination on the Basis of Sexual Orientation for Membership in the AMA or Any of its Constituent Associations.** *Re-referred to Reference Committee on Bylaws as Resolution 95-102.*

- 95-615: AMA-JCAHO Relationship.** Calls for the AMA to adopt a policy that all JCAHO policies in variance with AMA policy should be tracked and reported annually to the AMA-OMSS. *Not adopted.*

Public Health

- 95-701: Provision of Clean Needles/Syringes to Drug Addicts.** Calls for the Society and the AMA to adopt the policy that such provision is warranted as a means of AIDS control. *Adopted as amended.*

- 95-702: Candidacy for Blood Donor Status as Determined by the American Red Cross.** Calls for Society and AMA policy of exclusion if a donor is found to be polycythemic or is aware that a sex partner may have been exposed to AIDS. *Referred to the board.*

- 95-703: Mother-to-Child Transmission of the Human Immunodeficiency Virus.** Calls for Society policy supporting mandatory testing of all pregnant women, and appropriate counseling and treatment. *Not adopted.*

- 95-704: Congratulating President Clinton for Anti-Tobacco Activities.** Calls for letters from Society and AMA. *Substitute resolution adopted in lieu of Resolutions 95-704 and 95-705.*

- 95-705: Increased Tobacco Use Among Young People.** Calls for letters to President Clinton, supporting his efforts to address the problem of increased tobacco use among our young people, and to majority and minority leaders of Congress, asking that they support the administration's efforts on this issue. *Substitute resolution adopted in lieu of Resolutions 95-704 and 95-705.*

- 95-706: Preservation of Clean Air and Clean Water Legislation.** Calls for letters to majority and minority leaders of the House of Representatives and Senate, asking that the current clean air and clean water legislation be maintained at its present level to preserve the good health of America's citizens. *Adopted as amended.*

- 95-707: Smoking Ban in Restaurants.** Calls for development of model legislation and change in Society policy to ban use of tobacco products in restaurants. *Adopted.*

House Proceedings Available to Members

A bylaws change approved by the House in 1993 calls for the State Society to publish a summary of the House proceedings in the December issue of PENNSYLVANIA MEDICINE, rather than print the entire official proceedings in the January issue, as done in the past.

Delegates and county medical societies will receive copies of the full proceedings. Members who would like a copy should contact their county societies or call the State Society at (800) 228-7823 or (717) 558-7750, extension 1406.

State Society Vows: "Tort Reform Now!"

The word received on September 28 that state Insurance Commissioner Linda S. Kaiser would impose a 68 percent emergency surcharge for the Medical Catastrophe Loss Fund (CAT Fund) was the final straw. Pennsylvania physicians have recognized the need for tort reform for nearly two decades, but this latest twist has prompted an urgent need for action on the hill in Harrisburg.

The State Society has been fighting for reform for many years now, while alternately jousting with and monitoring the unpredictable CAT Fund. As Pennsylvania physicians heralded the Society's alarm this fall, Society-sponsored legislation was already being introduced.

More than 50 members of the Pennsylvania Medical Society and other physician organizations converged on the Capitol on October 26 to support medical liability tort reform legislation introduced by Representative J. Scot Chadwick (R-Bradford). House Bill 2122, a comprehensive medical liability and tort reform bill introduced at the Society's request, seeks to:

- promote periodic payment of damages in lieu of lump sum payments;
- clarify informed consent requirements;
- eliminate duplicate payment for the same injury;
- allow patients to arbitrate medical malpractice claims;
- revise the statute of limitations;
- deduct the payment of some collateral sources;
- propose sanctions to prevent frivolous lawsuits;
- revise the definition of expert witness;
- allow pre-treatment agreements to arbitrate; and
- impose an across-the-board, 10 percent rate decrease in premiums.

Representative Chadwick told media at the press conference, "Only 43 cents out of every liability dollar goes to pay the injured party; 57

[cents] goes to attorneys, experts, and insurance company executives. My bill won't solve all the problems of our liability system, but it makes a meaningful and common sense start."

John H. Hobart, MD, in his final public appearance as Society president, discussed the broad concerns of physicians. "A recent survey of all Pennsylvania physicians confirmed what we already knew—there is no other issue which causes physicians greater concern than the cost and anguish of professional liability," he said. "We're here today

as a group to say that our medical liability tort reform system is broken and needs to be fixed."

Also speaking at the news conference was Robin Scheiner, MD, a dermatologist with practices in Chester and Delaware counties, who recounted her frustrations with a frivolous lawsuit, and Arnold Sokol, MD, president of the Pennsylvania Osteopathic Medical Association, who affirmed his organization's strong support for immediate changes.

House Bill 2122, which to date has 52 legislative sponsors, has been referred to the House Judiciary committee for further study. Representative Chadwick is a member of that committee.

Your Society's strategy

- *On Capitol Hill:* The Society has requested a meeting with Governor Tom Ridge to discuss tort reform and the CAT Fund.

- *Across the State:* The Society is planning a summit on December 12 and a rally on Capitol Hill on January 23, 1996. For details, see the special insert in this issue.

- *In the Senate:* The Society also supports Senate legislation aimed at reforming the CAT Fund by shifting powers to the basic carrier, by using prevailing primary rates as the basis for surcharge calculations, and by foreclosing the need for future "emergency" surcharges by the fund. Sponsored by Senator Ed Holl (R-Montgomery),

Senate Bill 1122 was amended and reported favorably by the Senate Banking and Insurance Committee, and is now on the Senate calendar for a vote.

- *At the House of Delegates:* As part of the Society's response to recent CAT Fund surprises, the House approved three items:

- a report outlining legal rights of the Society and its entities related to the CAT Fund;
- a resolution which seeks to educate physicians regarding litigation; and
- a recommendation of Dr. Rhoads seeking elimination of defensive medicine expense related to physicians' medical liability concerns.

Physicians and their spouses filled the stage of the Capitol pressroom in support of "Tort Reform Now!" Pictured (left to right) are: John P. Judson, MD, Interspecialty Section; Ferdinand L. Soisson Jr., MD, Eleventh District trustee; Jean Greco, Pennsylvania Medical Society Alliance past president; Victor F. Greco, MD, Society president elect; Robert L. Lasher, MD, Society secretary; Representative J. Scot Chadwick; and John H. Hobart, MD, Society immediate past president.

"My bill won't solve all the problems of our liability system, but it makes a meaningful and common sense start," Representative J. Scot Chadwick told media at the Society's October 26 press conference.

TERRESTERIAL CAPITAL CORP.

(Practice Management Group)

To: Practitioners

From: Terrestrial Capital Corp.

Terrestrial Capital Corp. (TCC), a wholly owned subsidiary of Terrestrial Capital Holdings, Inc., announces the expansion of its practice management group's financial service operations.

Terrestrial Capital Corp. (TCC) will provide small to medium practitioners flexible account receivable financing in amounts of \$50,000.00 to \$150,000.00 per month, by utilizing third-party accounts as collateral on an ongoing basis.

Cost (1) (2)

rate established as "prime" plus +/- % with funding level based on prior monthly collection history.

Structure

Medicare, Medicaid;
Other third-party plans;
no self-pay.

- (1) The funding is structured as an ongoing forty-five (45) day transaction.
- (2) The "rate" quoted for the financing will be determined by Terrestrial Capital Funding, Inc.

A low-cost billing and collection service is an integral part of the financing.

It is anticipated that the expanded services provided by Terrestrial Capital Corp. (TCC) will be offered to qualified practitioners beginning in October 1995.

Society Victory Nets in Excess of \$54 Million for Providers

Elizabeth B. Metz, Esq.

Last year, the Society prevailed in litigation challenging the state Medicaid program's failure to pay the full Medicare patient cost-sharing (deductibles and coinsurance) for low-income beneficiaries—known as Qualified Medicare Beneficiaries (QMBs). Prior to the Society's court victory, the Department of Public Welfare (DPW) only made QMB cost-sharing payments to providers who participated in the Medicaid program. In addition, DPW limited its QMB cost-sharing payments to participating Medicaid providers to the excess of the Medicaid fee schedule amount over the Medicare payment.

In most cases, even participating Medicaid providers received no QMB payment once the QMB's Medicare deductible was satisfied—because the Medicaid fee schedule amount is invariably less than the Medicare payment. For example, the Medicare locality 1 participating physician fee schedule amount for an open heart valvotomy with a cardiopulmonary bypass (33422) is \$2,970. Medicare would pay \$2,376 (80 percent), leaving \$594 (20 percent) in coinsurance. However, DPW would have made no QMB coinsurance payment, as Medicare's payment exceeded the Medicaid fee schedule amount of \$1,000.

In December 1994, the court ordered DPW to pay the full QMB patient cost-sharing for all claims processed on or after September 26, 1994. After the court order and at the Society's urging, DPW also agreed to make QMB payments to non-participating Medicaid providers. The state has been working since December 1994 to implement the court's order and related agreements, and now is largely in compliance.

As of mid-November 1995, providers had been paid \$54 million for QMB patient cost-sharing because of the Society's efforts. More than \$35 million of that amount was paid to physicians.

Society efforts compel DPW to begin payments to non-participating Medicaid providers and to pay their backlogged claims, estimated to be in excess of \$24 million.

Until recently, DPW has paid QMB patient cost-sharing payments only to physicians who participate in the Medicaid program. As noted, non-participating Medicaid physicians also are eligible to receive QMB patient cost-sharing payments. However, DPW was slow to implement the system changes needed to process the payments due to non-participating Medicaid physicians.

After the Society threatened to take the state back to court, DPW agreed to complete the necessary changes by November 20, 1995, and to pay the back-logged claims for prior processing periods, which are estimated to exceed \$24 million.

The Society is taking action to secure full payment of the 50 percent coinsurance for outpatient psychiatric services.

The Medicare coinsurance for outpatient psychiatric services is effectively 50 percent of the Medicare fee schedule allowance. However, DPW has contended that it is only required to pay coinsurance of 12.5

percent. The dispute results from the complex way Medicare calculates its payment for outpatient psychiatric services. When a claim is submitted for these services, the carrier calculates Medicare's 80 percent share based upon 62.5 percent of the Medicare fee schedule allowance, rather than 100 percent of the fee schedule allowance.

As illustrated in the box below, when the beneficiary's deductible is satisfied, the coinsurance is 50 percent of the Medicare fee schedule amount. DPW's payment of only a 12.5 percent coinsurance results in a 37.5 percent coinsurance payment shortfall for physicians when they provided outpatient psychiatric services to QMBs.

The Society and DPW are in the final stages of negotiating a settlement on this issue. Legal counsel has been consulting with Pennsylvania Psychiatric Society counsel regarding the proposed settlement terms. If a settlement cannot be reached, the Society's board has authorized legal counsel to go back to court.

QMB payment schedules **Participating Medicaid providers** QMB claims for participating Medicaid providers fall into three categories:

Outpatient Psychiatric Services Coinsurance

a. Physician's charge	\$110.00
b. Medicare fee schedule	100.00†
c. Reduced allowance (62.5 percent of line b)	62.50
d. Unmet deductible	0
e. Remainder (line c - line d)	62.50
f. Medicare payment (80 percent of line e)	50.00
g. Beneficiary's actual coinsurance (line b - line f)	50.00
h. DPW's coinsurance payment (20 percent of line c)	12.50
Amount in dispute (line g - line h)	37.50

†Line b does not reflect the actual fee schedule amount for any of the covered services. \$100 was selected solely to simplify the calculations.

RALLY FOR CHANGE

ON JANUARY 23, 1996

AT THE CAPITOL

TORT REFORM NOW!

SUPPORT HOUSE BILL 2122

Why a rally?

Now is the crucial time to show legislators and the public how important their physicians believe medical malpractice liability reform is to the future of good, quality health care in Pennsylvania. The State Society's tort reform legislation—HB 2122—has been introduced. Your Society has done all it can to secure sponsors, to lobby for passage, and to convince the legislative leadership of the urgent need for reform. Now, only the voice of Pennsylvania physicians—your voice—can move it to passage. Only physicians, showing their strong support—and their real concern—can bring about true reform.

What's the State Society doing about the CAT Fund and the need for tort reform in Pennsylvania?

Everything we can! We've proposed legislation, we're building coalitions, meeting with the administration and other business and health care leaders, lobbying our legislators, educating our colleagues and the public. Read on in this special insert to understand more about the State Society's strategy and initiatives.

What can you do to help?

Join us in Harrisburg on January 23, 1996. With the legislature in session, we will march to the Capitol to show our unity and our concern that Pennsylvania urgently needs reform of its medical malpractice liability laws. Whether or not you're able to attend, encourage your colleagues, co-workers, patients, and family to attend.

Rally for Change: January 23, 1996 Watch for details

More details about the Rally for Change will be sent to all Society members in the next few weeks. Bring your patients, staff, family, friends—anyone who believes the current medical liability system is out of control. Bus and car pool transportation is being arranged by county medical societies, hospital medical staffs, and other organizations all over Pennsylvania. Ask them how to sign up.

Here is the preliminary schedule:

- Arrive at Harrisburg area hotel: 10-11 a.m.
- Pre-rally program: 11 a.m.
- Box lunch
- Rally on Capitol Hill: 1 p.m.
- Visits with your local legislators
- Buses/cars depart for home by 3:30 p.m.

KEY PROVISIONS OF MEDICAL LIABILITY/ TORT REFORM LEGISLATION: HOUSE BILL 2122

Following are key provisions of the State Society-supported legislation, sponsored by Representative J. Scot Chadwick (R-Bradford).

INFORMED CONSENT

The legislation will require that physicians obtain informed consent prior to a "major invasive procedure" except in emergency situations or where the court deems appropriate. Patients must be given a description of the procedure along with any risks and alternatives. The physician does not have to advise the patient of information that should already be known, or that the patient requested not to be revealed. Furthermore, information detrimental to the patient's health is not required to be conveyed by the physician. A written consent signed by the patient presumes informed consent was given. The information to be provided must be that which a reasonable physician would provide a patient. *Note: Expert testimony will be required to determine a "major invasive procedure," and identify the risks and alternatives to treatments.*

COLLATERAL SOURCES

Under the provisions of the bill, the court shall deduct any public or group benefits received or to be received by the claimant unless: The premium was paid by the claimant; or the benefits are from life insurance, a pension, or a profit-sharing plan. The court may also be advised of a right to subrogation. This provision does not erode a victim's ability to be compensated, but directs that the court shall deduct any duplicate payments.

PUNITIVE DAMAGES

Reasonable limits will be placed on punitive damage awards in two ways. First, punitive damages can only be accorded with clear and convincing evidence that the defendant acted with an evil motive or disregarded a high degree of risk. Secondly, punitive damages will be limited to not more than 200 percent of compensatory damages. Finally, the issue will be divided so a court must first decide that punitive damages shall be assessed before it holds a hearing to set the amount. This preserves the doctor's confidentiality with respect to assets.

STATUTE OF LIMITATIONS

Medical negligence claims must be filed within two years of discovery or four years from the act which caused the injury, whichever is earlier. The four-year limit does not apply to injury caused by foreign objects left in the body. Cases involving injured minors under the age of eight must be filed within four years after the parent/guardian knew or should have known of the injury, or within four years of the minor's eighth birthday, whichever is earlier.

PERIODIC PAYMENT OF FUTURE DAMAGES

Awards with future damages which exceed \$200,000 shall be paid in periodic or installment payments.

EXPERT WITNESS

A physician testifying as an "expert" witness must be licensed and have personal experience and practical familiarity with the subject. Also, the expert must have been actively engaged in direct patient care in the same medical subject. Finally, the expert must be board certified if the defendant is board certified.

FRIVOLOUS LAWSUITS

Empowers courts to sanction attorneys who file frivolous lawsuits. Attorneys must make reasonable inquiries into the facts of the case. Sanctions may include paying defendant's reasonable expenses such as court filing fees and attorney fees. Also requires plaintiff to certify that a properly qualified expert has concluded, based on preliminary review, that the case has merit. Also requires early exchange of expert reports.

PRE-TREATMENT AGREEMENT TO ARBITRATE

By permitting voluntary use of pre-treatment agreements, the legislation would set forth safeguards to assure that patients are not coerced to sign such agreements and

would have the opportunity to reconsider after receiving treatment. The proposal would require that the CAT Fund be bound by such agreements.

EXPANSION OF COVERAGE

Redefines professional liability insurance coverage and other changes throughout the bill which make it clear that any claim brought against a health care provider under Act 111 for medical professional liability will be covered even if brought by a third party.

RISK MANAGEMENT

Mandates that institutions which qualify as health care providers under the act and medical professional liability carriers and self-insurers must develop approved risk management programs.

WHAT IS THE STATE SOCIETY DOING ABOUT TORT REFORM?

- ✗ **Hosting a Liability Leadership Summit on December 12**, inviting representatives of county societies, all specialty societies, all Society sections, medical schools, and Pennsylvania Osteopathic Medical Association leaders to participate. The meeting will focus on the importance of a coalition to achieve our goals.
- ✗ Working with a coalition to **amend Act 111** to improve the operation and function of the CAT Fund through Senate Bill 1122 introduced by Senator Edwin G. Holl.
- ✗ Requesting a **meeting with Governor Tom Ridge** and his key staff as soon as possible to tell them of the personal disaster for many physicians related to the CAT Fund surcharge and to propose solutions.
- ✗ **Meeting with CAT Fund administrators** to explore immediate changes in CAT Fund operations.
- ✗ Charging a new **Tort Reform Priority Work Group** to come up with a short-term and long-term strategic plan to achieve public awareness of the medical malpractice liability problem in Pennsylvania and to achieve meaningful reform.
- ✗ **Providing immediate responses** during crucial negotiations through a newly appointed physician Tort Reform Quick Response Committee.
- ✗ **Alerting the public** and other providers that Pennsylvania physicians face a 1996 CAT Fund surcharge of 164 percent—an overwhelming financial burden which will continue to rise throughout the decade if relief is not found.
- ✗ **Educating the public**, key legislators, the governor, and other health care providers of the potential impact on the future of quality health care which the CAT Fund and the lack of tort reform may cause in their commonwealth.
- ✗ Planning a series of **district meetings with legislators** in their home districts to educate them about the Society's concerns.
- ✗ Encouraging the creation of **Action Teams** in county medical societies and hospitals throughout the state, and encouraging specialty groups to do the same, to provide immediate response as crucial legislative negotiations proceed.
- ✗ **Alerting all State Society members** to Society strategy on tort reform and the CAT Fund through a President's Letter.
- ✗ **Working with allies** such as the Pennsylvania Association of Physician Assistants, the Pennsylvania Association of Medical Assistants, the Pennsylvania Medical Group Management Association, nursing homes, Defense Institute, business groups, and others to support our efforts.

KEY PROVISIONS OF HB 2122

- ✓ Impose sanctions on attorneys who file frivolous lawsuits.
- ✓ Eliminate duplicate payments for the same injury.
- ✓ Clarify informed consent requirements.
- ✓ Require certification that an expert has reviewed the case and is prepared to testify on the plaintiff's behalf.
- ✓ Allow patients to arbitrate medical malpractice claims.
- ✓ Require pre-trial preparations to be completed expeditiously and pre-trial conferences to be used to promote settlement.

TORT REFORM NOW! HB 2122

SOME QUESTIONS ABOUT THE CAT FUND (OR HOW WE GOT TO WHERE WE ARE)

Q: Why was the CAT Fund established?

The legislature established the CAT Fund in 1976 to address three problems:

- (a) The difficulty of insuring against a string of very large verdicts given the comparatively small size of Pennsylvania's malpractice insurance carriers—The solution was to spread the risk of these catastrophic losses among all the carriers by having a fund to cover claims above \$200,000 up to \$1.2 million.
- (b) The difficulty of establishing adequate reserves for claims that may be settled on an average six or more years in the future—The solution was to again spread the risk by having the CAT Fund pay for claims that took a particularly long time to be reported. The fund pays for claims filed four years or more after the occurrence that gave rise to the claim.
- (c) The claim that the crisis of the mid-1970s was caused by the greediness of the insurers—A particularly effective tactic of the trial bar was to claim that there was no malpractice crisis but simply exorbitant profits by the insurance companies. The CAT Fund thus is funded on a pay-as-you-go basis. There are no reserves, no actuaries, no profits, no shareholders.

Q: How does the CAT Fund operate?

The CAT Fund operates on a "pay as you go" principle. It is fundamentally **unlike** an insurance company. An insurance company, for example, will collect premiums in 1980 for occurrences in 1990, put that money in reserves, and pay the money out in a claim settlement in, let's say, 1990. The CAT Fund would collect no money in 1980—instead it would collect the money in 1990 when the claim is paid. An insurance company that promised to pay for 1990 claims but collected no premium for 1980 would go bankrupt; it could not collect premium in 1990. In insurance parlance it would have "unfunded liability." Insurance people have applied this insurance parlance to the fund. The fund, however, works on a different premise—it makes no early promise to pay awards and can collect money at the time the claim is settled. In any event, the "unfunded liability" is substantial: \$1.9 billion. To continue with the example, the fund would calculate the 1990 surcharge as follows: First it would calculate what it spent in claims payment and administrative expenses in 1989. It would then add a buffer of \$15 million, collect that amount early in 1990, and use it to settle claims in 1990. If the amount were too little, the fund collects the shortfall through an emergency surcharge; if it collects too much, the excess goes to reduce the surcharge for the next year.

Q: How did the present CAT Fund crisis come about?

The fund surcharge is based on what the fund spent the previous year, so any rapid increase in claims payouts can create the need for an emergency surcharge. That happened in 1995 due to the Day Backward Program in Philadelphia, the discounting of primary insurers, and other causes. The Day Backward Program was the court's response to the substantial delays in resolving cases in Philadelphia. The program was successful: Several years' worth of cases began to be settled in a single year. In addition, the professional liability market among the primary carriers is at the moment extremely competitive. The surcharge is calculated as a percentage of premium. Some insurers were discounting heavily from premium with the result that the fund collected less than anticipated.

Q: Is the CAT Fund more or less expensive than traditional insurance?

Less expensive. The fund makes no profits, pays no premium taxes, and incurs minimal administrative expenses. In addition, the deferral of payment means that, in the example above, the physician is paying 1980 rates in 1990. While this is true over time, in a specific year the fund could be more expensive because of the bunching of claims. More clearly, the fund cannot be replaced with a traditional insurance system without paying off the unfunded liability.

Q: Is the fund audited?

Yes, the fund is audited as part of the annual audit of state government. From time to time the fund is audited by the watchdog auditor general and occasionally by others.

Q: Why does the Society support SB 1122?

Senate Bill 1122 does not and is not intended to address the underlying problem of increasing CAT Fund payouts. Tort reform is needed to do that. Instead, SB 1122 has the more pedestrian objective of improving CAT Fund operation. The Society supports SB 1122 in part because other proposals to address the problems would be far more costly and because the changes should bring improvements in the fund.

- *Claims received after system re-configured (Category 1)*—DPW's system has been re-configured to make QMB payments to participating Medicaid providers since January 1995. Claims received since that time have been processed under the new policy on an ongoing basis. Physicians began to receive payments for these claims in February 1995.

- *Claims processed under old system (Category 2)*—DPW processed claims under its prior policy from September 26 through November 15, 1994. DPW must reprocess these claims and pay any underpayments. DPW will automatically reprocess the claims. No action is needed by physicians. DPW also owes interest on underpaid Category 2 claims.*

- *Held claims (Category 3)*—DPW held claims received after November 15, 1994, until it completed the necessary system changes. These claims were processed and paid in batches in early 1995. DPW still owes interest on Category 3 claims.*

Non-participating providers

DPW's system should be re-configured to make QMB payments

to non-participating Medicaid providers by November 20, 1995. Claims received after the system changes will be processed on an ongoing basis. The back-logged claims—which cover the claims processing periods back to September 26, 1994—will be processed and paid in batches soon thereafter. DPW also must pay interest on these claims.*

** Interest generally accrues beginning 45 days after claims submission or January 1, 1995, whichever is later.*

Physicians can help the outreach effort to QMBs.

It is estimated that only about 50 percent of the eligible Pennsylvania QMBs are actually enrolled in the program. The Society has been working closely with DPW, the state Department of Aging, and Xact Medicare Services to increase QMB enrollment. Our combined efforts have resulted in new measures to improve QMB outreach efforts.

An informational brochure that physicians can distribute to their Medicare patients will soon be available free of charge. Watch State Society publications for information.

The future of the QMB program.

At the writing of this article, the future of the QMB program is uncertain. Changes to the program are part of the Medicaid reform debate ongoing in Congress. Our court victory was based upon the current federal laws which mandate states to pay the full Medicare patient cost-sharing. If payment of the full patient cost-sharing becomes optional, Pennsylvania may revert to its prior policies. The reforms also may make it more difficult for low-income Medicare beneficiaries to qualify for the QMB program.

Ms. Metz is the Society's counsel for health law and policy.

Questions?

Call the Society's Department of Medical Economics at:

(800) 228-7823

or

(717) 558-7750

Obtaining QMB Cost-Sharing Payments

In most cases, the physician only needs to submit one claim to Medicare on the HCFA 1500. DPW automatically makes QMB patient cost-sharing payments based upon the Medicare claims data tapes—except in limited cases where documentation is required to support the claim (e.g., a sterilization consent). When documentation is required, the physician must submit a separate claim to DPW, after Medicare pays its share.

When submitting a QMB claim to Medicaid using the HCFA 1500:

- Attach the required documentation and the Medicare Explanation of Medical Benefits (EOMB); enter the number of attachments and attachment code 05 in block 19.
- Enter DC in block 24C if the service is not otherwise covered under the Medicaid program.
- Do not include non-covered Medicare services on the claim.

When submitting a QMB claim to Medicaid using the MA 319 or a MA 319A adjustment:

- Enter DC in block 29H if the service is not otherwise covered under the Medicaid program.
- Enter the Medicare-approved amounts in block 29O.
- Enter the deductible and coinsurance amounts in blocks 34 and 35 respectively.
- Attach the required documentation.
- Do not include non-covered Medicare services on the claim.

Non-participating Medicaid physicians are now assigned a Medicaid provider number.

DPW now assigns a Medicaid provider number to non-participating Medicaid physicians who care for QMBs, and notifies physicians of their number by letter. The assignment of a Medicaid provider number does not transform non-participating Medicaid physicians into participating Medicaid physicians or require them to see Medicaid patients. The number will be used solely to track and reconcile QMB cost-sharing and interest payments. Non-participating Medicaid physicians should maintain their provider number on file for these purposes.

QMB enrollment process and eligibility requirements.

Enrollment takes place at the local Medical Assistance office. Through discussions with the Society, DPW has agreed to have at least one individual in each office who is familiar with the program and can assist in the application process. QMBs must meet an income test and an asset test to qualify for the QMB program. Their income must be below poverty. The 1995 income limits are \$643/month for an individual and \$856/month for a couple. The 1995 asset limits are \$4,000 for an individual and \$6,000 for a couple (excluding home, car, and personal belongings). Note: These limits generally are higher than are required for Medicaid eligibility.

What POs Mean for PA Physicians

Michael P. Lance

The PennMed Member Services Company (PMSCO) continues to align physicians throughout the state into regional multispecialty physician organizations (POs). These organizations are developed to help position physicians in a managed care environment.

During my meetings with physicians over the past year, several common questions continue to be asked. This is an attempt to try to answer questions about the formation of these POs and what they will be able to accomplish for Pennsylvania physicians.

Q: Why does PMSCO support the multispecialty approach for physician organizations?

A: The multispecialty approach allows us to include as many or all of the physicians within a community. This means "marketability" for the PO. There are several key benefits of the multispecialty approach. These include:

- the highest degree of patient choice, which means a more attractive PO to payers;
- the ability for physicians to maintain their referral patterns;
- enhanced attractiveness to employers and patients;
- the complete range of care within a PO's utilization review strategies;
- the physician-patient relationship is maintained;
- as your patients change health coverage, you can still have access to them; and
- the ability to effectively manage the entire medical component and to be rewarded for this management.

Q: Wouldn't payers prefer to contract with individuals rather than with a PO?

A: PMSCO has been meeting with all of the major payers in the state on a regular basis. Six months ago, these payers were not interested in working with POs, but we have witnessed a real change in attitude among them.

Key executives within some of the largest HMOs in the state have actually said that if there was a strong PO in a community, they would first try to work through the PO. In

addition, they have admitted that they would much rather work with a PO than with a PHO. The payers realize that the greatest opportunity to reduce health care costs lies in the hospital component, and the "H" in the PHO does not have the right incentive to reduce hospital costs.

The physicians—not the hospital—manage utilization. And, in many cases, payers are looking for a way to enter a community. A well-managed PO is the perfect vehicle for them to do this.

Q: We already have a PHO in our community. Do we really need a PO too?

A: Absolutely! As we move into a mature managed care environment, the most important values physicians have are their patient base and patient contracts. For this reason, it is imperative that physicians own their own portion of the managed care contracts. By owning the professional component of the contracts, you control how the dollars are spent.

A PHO is likely to sign shared-risk contracts for the physician and hospital components and would therefore own those contracts. A separate PO creates a vehicle for physicians to negotiate cooperatively with the hospital when dealing with payers. You need to have a PO to own the professional component of the contract and to allow physicians to be represented throughout these negotiations.

Q: Is the success of the PO going to be at the expense of our hospital?

A: The success of the PO will actually benefit the hospital. As the PO continues to become more marketable, it will attract more payers to provide "at-risk" contracts which will help you develop mutually beneficial arrangements with the hospital and bring patients into your system, instead of taking them out. This will help all of the players in the system. We are working, however, to ensure that the appropriate portion of the health care premium goes to physicians and that physicians are appropriately awarded for managing medical resources.

Mr. Lance is chief executive officer of the PennMed Member Services Company.

Q: We have had an IPA for several years, and it has done nothing. How is what PMSCO is proposing any different?

A: The POs that we are developing are POs of the future, not POs of the past. These multispecialty shareholder entities are specifically designed to pursue managed care contracting opportunities, and more importantly, they are developed with the infrastructure to accept and manage the full professional component of the premium dollar.

Our PO models are flexible to meet the needs of the community in which we are working. However, all of them are designed to be the contracting entity on behalf of their shareholders. The physicians then have a participating contract with the PO. The PO, in turn, develops the methodology to pay the primary care physicians a per-member, per-month capitation, and the specialists are paid on a fee schedule, which is also developed by the PO.

In addition, the POs that we are developing will have active utilization review and quality assurance (UR/QA) programs. They will also employ their own medical directors. This allows the physicians in the PO to have control over the way in which they deliver care, by having an opportunity to serve on these UR/QA committees and actually having input into the protocols that are used.

Q: Can the PO be successful if there are a lot of specialists?

A: The specialists actually make the PO more marketable. Patients benefit from all physicians within the medical community and will only give up their option to choose if forced to do so. Once a referral is made, specialists control a large portion of the medical costs and also write half of the prescriptions that may be included in our contracts. Their ability to participate in the rewards of managing these resources will result in a far better performance in these pools than without their ability to participate.

The goal of the PO is to prepare to assume capitation. Capitated contracts will have a specialists' pool budget that cannot be exceeded and is protected by withholds. Specialists cannot consume more than their allotted portion. So, to limit the panel to receive these allocations would minimize our marketability.

For example, if we limit general surgery costs to \$100,000 per month, why does it matter if we have one or 10 general surgeons? In fact, if we have 10, aren't we more marketable? In summary, capitation

does not permit specialists to over-consume when properly managed.

It is important, however, for the board of directors or the governance to be a majority of primary care. This illustrates to the payers that the PO is prepared to place the emphasis on preventive primary care for its subscribers.

Q: Isn't it very expensive to purchase the systems to run an IPA, and where will those dollars come from?

A: Most of the POs we have worked with intend to utilize funds from their earlier membership drives and stock solicitation process to obtain experienced consulting and management services to help them become operational. As they obtain contracts, they plan to take a small percentage of the revenues to apply toward management services such as claims processing, utilization management, data management, and contracting.

Properly managed administrative services can actually generate income via proper management of expense recoveries such as stop-loss on reinsurance, third-party liability, and coordination of benefits. PMSCO does have the ability to manage POs, whether or not we have developed them.

Q: Does PMSCO have ownership in the POs that it is helping physicians to form?

A: No. Most of the POs we are working with are shareholder models, or we are assisting in their transformation to become shareholder models. Only physicians can own a share of stock, and no one physician can own more than one share of stock. This prevents any one group or interest from controlling the POs. In addition, once a share of stock is purchased, it cannot be transferred or sold. The only way additional shares can be sold, once a stock solicitation is complete, is if a PO deems it necessary to provide additional needed services.

Editor's note: With the increasing number of requests for assistance, PMSCO continues to expand its services. Recently, Earl A. Schulte, MD, was named chief operating officer for the company. Dr. Schulte, who comes to PMSCO from San Bernardino, California, has in excess of 40 years of professional training and experience in health care.

Next month, Dr. Schulte will share his thoughts on the Pennsylvania health care market and how PMSCO is making a difference for the physicians in the state. ◊

"Our PO models are flexible to meet the needs of the community in which we are working."

Integration Insider

Analysis of the emerging health care marketplace in Pennsylvania and beyond.

This ongoing column updates Pennsylvania physicians on the state of managed care in the commonwealth and nation. News, divided regionally, is derived from press reports. For more information about this topic, call the PennMed Member Services Company (PMSCO) at (800) 228-7823 or (717) 558-7750.

► Blue Cross of Western Pennsylvania in mid-October announced an affiliation with Prime Medical Group, Inc., a physician-owned primary care group with 47 physicians at 33 locations from Braddock and Brentwood south to Washington. Officials of Blue Cross and the physicians' group said the affiliation would strive to provide high-quality care and reduce health care costs. [*Pittsburgh Post-Gazette*]

• Two-thirds of the members of the region's three largest HMOs—Keystone, HealthAmerica, and U.S. Healthcare—are either completely satisfied or very satisfied with their coverage, according to a survey commissioned by the Pittsburgh Business Group on Health. The findings, released in October, showed that only about one in 10 HMO members expected to switch plans. [*Pittsburgh Post-Gazette*]

• The Federal Trade Commission has approved a 35-physician hematology/oncology network in Pittsburgh. The commission says because the non-exclusive network includes less than 30 percent of the hematologists in the area, and the network plans to market its services on a capitated basis, it falls within the antitrust safety zones. [*BNA's Health Law Reporter*][†]

► HealthAmerica of Central Pennsylvania has entered into an agreement with Wyoming Valley Physician Hospital Organization, a not-for-profit corporation jointly founded and governed by Wyoming Valley Health Care System and more than 365 area physicians. The agreement—to be effective January 1, 1996, subject to state approval—will result in HealthAmerica's managed care health insurance plans being offered initially as options to residents of Luzerne and Columbia counties. The Wyoming Valley PHO comprises the network of providers for the HealthAmerica plans.

The company has also announced the expansion of its service area into Lycoming, Northumberland, Snyder, and Union counties. [*HealthAmerica of Central Pennsylvania press releases*]

► The University of Pennsylvania Health System has signed an affiliation agreement with Community Visiting Nurse Services, Inc. (CVNS), a home health agency that provides specialized patient-care services—skilled nursing, physical therapy, maternal/child health care, and hospice care—to residents of Chester and Montgomery counties. [*University of Pennsylvania Medical Center press release*]

• St. Christopher's Hospital for Children, Philadelphia, and St. Luke's Hospital, Bethlehem, last month completed an affiliation agreement which increases the clinical linkage between the two hospitals and provides for the development of joint educational programs. [*St. Christopher's press release*]

Facts, figures, etc.

• A Johnson & Higgins Employee Benefits Services survey found that managed care is on the increase at mid-sized employers (100 to 999 employees). The survey found that in 1994, only 46 percent offered fee-for-service options, down from 57 percent in 1994. Also, the use of point-of-service plans rose from four percent in 1993 to 15 percent in 1994, and the use of PPOs rose from 24 to 30 percent in the same time period. [*The Executive Report on Managed Care*][†]

• A KPMG Peat Marwick survey found that group health premiums and claims paid by self-insured plans rose 2.1 percent between the spring of 1994 and the spring of 1995. KPMG reports that this marks the first time health care cost increases trailed behind the consumer price index, and attributed this to the increased market share of cost-efficient managed care plans and aggressive employer negotiation of health care benefits. [*Modern Healthcare*][†]

Managed care moves, state by state

• The Florida Medical Association and Florida Osteopathic Association are proceeding with plans to form a physician-owned HMO. The associations plan to raise \$60 million in start-up capital by selling shares of stock to physicians for \$5,000. Primary care physicians may purchase one share of voting stock; specialists may buy one share of voting and one share of non-voting stock, also priced at \$5,000. The HMO hopes to be operational by January 1997. [*Tampa Tribune*][†]

[†] Excerpted from "AMA Market Trends"

**WHEREVER WE SHOW UP,
RATES GO DOWN.**

Whenever we come into a state, good sense comes along, nonsense exits. Stability returns to the medical liability insurance market. In nine states 18,000 of our member-insured doctors have been enjoying the new cost climate. Protected by one of the largest medical professional liability monoline insurance companies in America. And defended by a firm of medically savvy litigators who close almost 80% of cases without payment.

And, year in and out, win nearly 90% of cases that go to trial.

For information, call 1-800-228-2335.

Responsive approaches to demanding new challenges in liability protection.

CENTER ADDS FOUR CLASSES TO DRUG RESOURCE LIST

Physicians across the state agree that they need an unbiased source of information on prescription drugs. Based on the results of a statewide survey, Pennsylvania physicians are especially interested in reliable drug cost information. In response, the State Society's *Center for Professional Drug Education and Information* has periodically published in *PENNSYLVANIA MEDICINE* cost information for medications in various drug classes. Four new classes have been added to this group:

- 1) Antidepressants: Cyclics
- 2) Antidepressants: SSRIs, MAOIs, and Miscellaneous
- 3) Beta Blockers
- 4) Antihyperlipidemics

Antidepressants are most commonly prescribed for the treatment of primary major depression. However, specific drugs may have indications for use in anxiety, obsessive compulsive disorders, chronic pain, panic

disorder, eating disorders and dermatologic disorders.

Beta blockers have been primarily prescribed for the treatment of hypertension. Angina pectoris, cardiac arrhythmias, various tachycardias, myocardial infarction, and migraines are among the several other uses for this therapeutic class.

Antihyperlipidemics are used to decrease serum levels of cholesterol and triglycerides. Lovastatin can also be used for the treatment of atherosclerosis, and cholestyramine is also indicated for use in biliary obstruction.

Physicians should base selection of these therapeutic agents on indication, clinical experience, patient convenience, side effects, and cost.

The chart below represents the average wholesale price for a 30-day regimen of antihyperlipidemics, plus a \$3.50 dispensing fee. While prices vary from pharmacy to pharmacy and region to region, these charts provide physicians with a means for making relative comparisons within their respective therapeutic classes. The drugs are listed in alphabetical order by brand name.

Other charts available to physicians compare ACE Inhibitors, Antiadrenergic Agents, Broad Spectrum Antibiotics, Calcium Channel Blockers, Diuretics, H₂ Antagonists, NSAIDs, and Quinolone Antibiotics.

For a free pocket card or wall chart version of any of the 12 classes available, call the Society's Center for Professional Drug Education and Information at (800) 228-7823 or (717) 558-7750.

Note: If you have previously requested other drug classes, you will receive this information automatically.

Q&A: DRUG UTILIZATION

The State Society's Center for Professional Drug Education and Information receives numerous inquiries from physicians about drug interactions, side effects, and other drug-utilization issues. In an effort to share this information, the Center selects a question of general interest to appear in this column each month. The response, prepared by our clinical pharmacist, Anita Fabert, RPh, is based on an abstract of the latest scientific literature that has been developed with input and knowledge of experienced clinicians. If you have a question that you think would be of general interest, please contact the Center at (800) 228-7823 or (717) 558-7750.

Q: What medication therapies are available for the treatment of hyperlipidemia?

A: The treatment modalities can be divided into three classifications: bile

ANTHYPERLIPIDEMICS

Cost Comparison of 30 Days of Therapy for an Adult Patient

BRAND NAME	GENERIC NAME	ADULT DOSING*	QUANTITY	BRAND COST	GENERIC COST
BILE ACID SEQUESTRANTS					
Colestid	Colestipol	5 GM BID			
		ONE CAN 1 scoop = 5 GM	100 doses/1 can	\$81.63	N/A
		TWO BOXES 1 packet = 5 GM	60 doses/2 boxes	\$78.46	N/A
Questran/ Questran Light	Cholestyramine	4 GM BID			
		ONE CAN 1 scoop = 4 GM	42 doses†/1 can	\$39.67	N/A
		ONE BOX 1 packet = 4 GM	60 doses/1 box	\$86.09	N/A

†21 day supply

HMG-CoA REDUCTASE INHIBITORS

Lescol	Fluvastatin	20 mg QD	30	\$35.42	N/A
		40 mg QD	30	\$39.20	N/A
Mevacor	Lovastatin	20 mg QD	30	\$66.03	N/A
		40 mg QD	30	\$116.05	N/A
Pravachol	Pravastatin	10 mg QD	30	\$54.14	N/A
		20 mg QD	30	\$58.03	N/A
		40 mg QD	30	\$99.36	N/A
Zocor	Simvastatin	5 mg QD	30	\$56.92	N/A
		10 mg QD	30	\$59.89	N/A
		20 mg QD	30	\$105.69	N/A
		40 mg QD	30	\$106.63	N/A

MISCELLANEOUS AGENTS

Atromid-S	Clofibrate	1 GM BID	120	\$105.02	\$33.69
Lopid	Gemfibrozil	600 mg BID	60	\$75.49	\$62.88
Loelco	Probucol	500 mg BID	60	\$73.12	N/A

acid sequestrants, HMG-CoA reductase inhibitors, and miscellaneous agents.

HMG-CoA reductase inhibitors ("statins"), which competitively inhibit endogenous cholesterol production, are the most widely used agents. Approved statins available are *Lescol*®, *Mevacor*®, *Pravachol*®, and *Zocor*®. They are dosed at once daily, a plus when considering patient compliance. Dosages for this class can range from 5 mg (*Zocor*®) to 80 mg (*Mevacor*®).

All agents are indicated for hypercholesterolemia and hyperlipoproteinemia. *Mevacor*® is also indicated for atherosclerosis, and *Zocor*® has recently been FDA approved for use to reduce the risk of total mortality by reducing coronary death, nonfatal myocardial infarction (MI), and revascularization procedures in coronary heart disease (CHD) in patients with hypercholesterolemia. Adverse reactions can range from headache to GI symptoms.

Colestid® and *Questran*® are the agents that embody the therapeutic class of *bile acid sequestrants*. Both agents are indicated for hypercholesterolemia, with *Questran*® also being indicated for hyperlipoproteinemia. These agents are available in bulk form or individual dose packets. Dosing is one scoop or packet, one to three times daily. The most common adverse effect of both agents is constipation. This can be relieved with the concurrent use of a bulk laxative such as *Metamucil*®.

Other medications available for use are *Atromid-S*® and *Lopid*®, which are classified as *fibrin acid derivatives*. Indications for these agents include hyperlipoproteinemia and hypertriglyceridemia. Dosing is 500 mg (*Atromid-S*®) or 600 mg (*Lopid*®), two or three times daily. GI side effects are among the most common seen with this therapy.

Lorelco® is another agent available for use for hypocholesterolemia and hyperlipoproteinemia. It is structurally unrelated to any of the other agents and is dosed at 500 mg twice daily. GI irritation is a common adverse event, as well as QT prolongation. *Nicotinic acid*, a B-complex vitamin, can be used for hyperlipoproteinemia. However, in the high doses needed for this indication, the incidence of adverse

effects (peripheral vasodilation and various GI effects) is usually high and causes noncompliance in the patient. Sustained release products can alleviate this problem somewhat. Dosing can range from one to two grams, three times daily, and is best taken with food.

If you would like to have copies of complete monographs for the above medications, please call the Center at (800) 228-7823 or (717) 558-7750.

MEDICATION UPDATE

New indications

Aredia® (*pamidronate disodium*)—This bisphosphonate is now also indicated for use in the treatment of osteolytic lesions resulting from multiple myeloma.

Claritin® (*loratadine*)—A nonsedating antihistamine newly indicated for the treatment of chronic idiopathic urticaria (hives).

Leukine® (*sargramostim*)—Updated to include for use following induction chemotherapy in older patients with acute myelogenous leukemia.

New drugs

Adenoscan® (*adenosine*)—A new in vivo diagnostic for myocardial perfusion scintigraphy testing.

DDAVP® (*desmopressin acetate*)—Antidiuretic now available in tablet form for the management of central diabetes insipidus (a rare metabolic disorder).

Flolan® (*epoprostenol*)—FDA approved for the treatment of primary pulmonary hypertension in selected patients.

Fosamax® (*alendronate*)—The first nonhormonal treatment for osteoporosis in postmenopausal women and Paget's disease of bone.

Ultane® (*sevoflurane*)—An inhalational anesthetic for use in adult and pediatric patients for inpatient and outpatient surgery.

On the horizon

Look for *Precose*® (*acarbose*), the first alpha-glucosidase inhibitor for use as an adjunct in therapy for type II diabetes, to be available in January 1996. It should be taken three times daily with the first bite at mealtime. It can be used alone as an adjunct to dietary intervention or also given with a sulfonylurea.

NOTE:

Please note that in the November 1995 issue of PENNSYLVANIA MEDICINE under the classification of New Drugs, *Valtrex*® (*valacyclovir*) was incorrectly listed for use in the treatment of herpes zoster in the immunocompromised patient. It should read as the immunocompetent patient. *Valtrex*® is **not indicated** for use in the immunocompromised patient due to the fact it could cause a thrombotic thrombocytopenic purpura/hemolytic uremic syndrome (TTP/HUS).

Meeting Notice

Cosponsored by: American Medical Association
Federation of State Medical Boards, Canadian Medical Association
Federation of Medical Licensing Authorities of Canada

"Uncertain Times: Preventing Illness, Promoting Wellness" is the theme for the 1996 International Conference on Physician Health to be held on February 7-10, 1996, at the Sheraton San Marcos Hotel, Chandler, Arizona (near Phoenix).

Presentations dealing with all aspects of physician health, including wellness of well-being, impairment, disability, treatment, and education have been requested.

Of particular interest are issues of:

- stress and physician health;
- epidemiologic data;
- the effects of violence directed at physicians;
- violence occurring within physicians' families;
- patient exploitation;
- mental illness, including substance abuse;
- physical illness and disability;
- special populations;
- comparative data across states or countries; and
- physician well-being and family functioning.

For more information: Call Elaine Tejcek at (312) 464-5073 or fax your inquiry to (312) 464-5841.

KePRO Project Sheds Light on Anticoagulation in Atrial Fibrillation

Jeffrey Whittle, MD, MPH

As part of the move toward more cooperative quality improvement programs, the Keystone Peer Review Organization (KePRO) examined the use of anticoagulation in patients with atrial fibrillation. The study found that only about half the eligible patients were discharged on anticoagulant therapy.

This project, to ensure warfarin use by Medicare patients who do not have a contraindication, is based on very clear, expert consensus that optimal care of such patients involves closely monitored anticoagulation. Moreover, experts agree that for most individuals with atrial fibrillation, warfarin is a better anticoagulant than aspirin.

Proper anticoagulation therapy with warfarin could cut by more than half the 80,000 annual strokes due to atrial fibrillation, says the Agency for Health Care Policy and Research (AHCPR).

This consensus recommendation is buttressed by numerous randomized, controlled trials which demonstrated the benefits of anticoagulation and confirmed that there does not appear to be an upper age limit to the population that would benefit. There is also evidence in the literature, and from KePRO's pilot review of randomly selected charts of patients from around the state, that many patients are not receiving anticoagulation. Indeed, a recent article in *Circulation* lamented the fact that fewer than half of patients with atrial fibrillation were being anticoagulated.

In its project, KePRO randomly identified five geographically dispersed, relatively small hospitals with at least 100 patients with atrial fibrillation during the one-year period from July 1, 1993, to June 30, 1994. Small hospitals were targeted because previous studies suggested that adoption of this recommendation had been slower in these settings. From each hospital, medical records of 65 patients

with a diagnosis of atrial fibrillation were randomly selected.

These charts were reviewed to determine:

- whether the patient actually had atrial fibrillation during the hospitalization;
- whether there were clear contraindications to warfarin use;
- whether the patient was discharged on warfarin; and
- whether the patient was discharged on aspirin.

Of the 325 charts requested, 322 were available for review. Additional records were excluded due to clear contraindications to warfarin use. The end result found 181 patients who were eligible for anticoagulant therapy. Of these cases, 41.4 percent were discharged on warfarin. The overall rate of anticoagulation (discharged on warfarin or aspirin) was 52.5 percent.

Visits to each of the hospitals involved suggested that the vast majority of physicians agreed that warfarin was the best choice for patients with atrial fibrillation who did not have contraindications. Hospitals with the highest rates of compliance with the recommended use of warfarin did not have specific protocols in place to increase compliance.

Physicians meeting with KePRO representatives suggested that even doctors who would agree that warfarin should be used for a given patient might not do so because other problems are more salient during the hospitalization. For example, a chronic condition, such as atrial fibrillation, might not easily be addressed during a hospitalization focused on a more acute condition. This may also apply to the busy clinic setting, where the patient's presenting symptoms/condition may overshadow their chronic asymptomatic atrial fibrillation.

The physicians also pointed out the limitations of the study design. Most agreed that even retrospective chart review by a

Dr. Whittle is an internist as the Pittsburgh VA Medical Center and a part-time assistant clinical coordinator at the Keystone Peer Review Organization.

board certified internist may not identify the reason for not administering anticoagulants to a given patient. Perhaps a history of noncompliance or a previously expressed wish to avoid anticoagulation was the basis for the decision, but that was not evident in the medical record.

Limitations set aside, most physicians who participated were surprised at the extent of warfarin non-use. Each of the collaborating hospitals decided to share the findings with the medical staff, both to let them draw their conclusions and to increase awareness of the recent recommendations. Additionally, one facility did establish a structured improvement plan,

which included education and guidelines for warfarin use.

KePRO is anxious to accept suggestions from physicians or other health care professionals for other projects. These ideas can be forwarded to:

Lovastatin During Warfarin Therapy Resulting in Bleeding

Elias A. Iliadis, MD
Martin F. Konwinski, MD, PhD

CASE REPORT: A 78-year-old veteran with a history of chronic atrial fibrillation, vertebral-basilar insufficiency, transient ischemic attacks, and severe coronary artery disease had been maintained on warfarin. The patient presented to the emergency department with new onset of gross hematuria, left lower quadrant pain, and darkening of urine for two days prior to admission. Exam revealed an ecchymosis over his right thumb and palpable swelling in the left lower quadrant of abdominal wall, about 6 cm in diameter, with discomfort on palpation but without visible ecchymosis. The patient noted compliance with his medications, and he had no history of liver or renal dysfunction, bleeding dyscrasias, myopathy, thyroid disease, or diabetes.

Laboratory evaluation revealed a markedly elevated prothrombin time of 42 seconds (INR = 12.3), platelets within normal limits, and no evidence of liver function abnormalities nor elevation of skeletal muscle enzymes. Medical records revealed prothrombin times elevated to between 15 and 18.5 seconds (INR = 1.9-3.1) on warfarin 4 mg daily in the two- to four-month interval before admission. Two months prior to admission the only new medication, lovastatin 20

mg twice daily, was started for the treatment of hypercholesterolemia.

Lovastatin was felt responsible for his increased anticoagulation, and it was discontinued on admission. Warfarin was held, and within 24 and 48 hours, his hematuria and ecchymosis improved. A computed tomography scan revealed an intramuscular hematoma of the abdominal wall. Complete resolution of the hematuria occurred on the fourth hospital day when prothrombin time dropped to 20 seconds (INR = 2.6), and warfarin was restarted.

DISCUSSION: This case illustrates the development of bleeding due to excessive anticoagulation in a patient on chronic warfarin therapy who recently began lovastatin. The possible mechanisms of this coagulopathy include displacement of warfarin from its protein-binding sites or competitive inhibition of warfarin metabolism in the liver by lovastatin, thereby potentiating warfarin effect by lovastatin.¹

In the lovastatin package insert, there were some cases reported of lovastatin-warfarin interactions resulting in elevated prothrombin times. The manufacturer recommended frequent monitoring of prothrombin times during lovastatin administration to patients on warfarin and during dosage adjustments.²

Subsequently, case reports of

lovastatin-warfarin^{3,4} and simvastatin-warfarin⁵ interactions have also appeared in the literature.

While hypercholesterolemia may warrant use of drugs lowering hydroxy-methylglutaryl coenzyme A (HMG-CoA) reductase activity in patients on warfarin, the interaction of these agents with warfarin has to be kept in mind. Frequent monitoring of prothrombin times and appropriate reduction of warfarin dose will help to avoid excessive anticoagulation after starting of HMG-CoA reductase inhibitor therapy in a patient on warfarin.

KEPRO ADOPTS TQM—PART I

When World War II ended, Japan's economy was in shambles. Anyone old enough to remember the days before the war can tell you that any item purchased in the United States that bore the statement "made in Japan" was considered cheap and not expected to last beyond dinnertime of the date of purchase. With much technical help from our country, Japanese factories were rebuilt according to modern-day standards, and their economy began to flourish. But technical help was only part of what they got from us.

One of the early gurus of total quality management (TQM), who had tried unsuccessfully to sell his ideas to American industry, got a warm welcome from the Japanese industrialists who knew they had to manufacture high-quality products in order to erase the stigma of the pre-war days and compete in the world market. We all know how they acquired a large share of the automobile market in a relatively short time after the war. Although much of the credit for their success was attributed to the work ethic of the

Japanese people, American industry began to realize there was more to it than that.

It is somewhat ironic that TQM, which was sort of an export because it was unwanted here, eventually became an import. It has now become the focus of many companies in this country, both large and small, as they realized that purchasers would not settle for less than a quality product for their money.

Although the basic philosophy of TQM has not changed, a variety of different versions of the original models have emerged as new proponents enter the field as consultants and adapt systems to meet the needs of the companies they serve. So it was with the Keystone Peer Review Organization (KePRO) when we employed a consultant in 1993 to help us develop a plan for continuous quality improvement (CQI).

This was at a time when we were increasing our efforts to develop new products and business opportunities to become less dependent on the Medicare PRO contract. We knew we would have to be able to demonstrate that we could provide a quality service

for our customers. We also knew that TQM required a total commitment by our board of directors, senior management, and the entire staff.

Of course, a program of this nature could not be accomplished overnight. It would be an ongoing process that would include constant evaluation, measurement of success, and continuous improvement. When we submitted our proposal for our current PRO contract, we requested funding for our TQM program. The Health Care Financing Administration granted our request, and KePRO became the first PRO in the nation to have a department singularly dedicated to TQM.

So, this is how it started. I am pleased to report that we have gotten the necessary commitment from all parties, and that the program has been up and running successfully for over two years.

Next month, the contributing author, KePRO President Donald E. Harrop, MD will describe the various components of KePRO's TQM process and how TQM fits into the newly revised PRO direction, the Health Care Quality Improvement Program.

Why Do 60,000 Doctors Trust Us With Their Professional Reputations?

In an era of "not if, but when" a doctor will be accused of malpractice, your choice of professional liability coverage is extremely important. We know that *any* allegation can be devastating to both your professional reputation and your personal assets... making the company you choose critical to your future well-being. Many factors should be taken into account when making a decision.

Consider our financial strength and stability. We are rated A+ (Superior) by A.M. Best and AA (Excellent) by Standard & Poor's. No other company with an exclusive focus on the needs of the health care community has higher financial ratings.

Look at our experience. For nearly a century we have specialized in defending and protecting doctors. No other company has **successfully defended** more than 180,000 malpractice claims.

Local service is important, too. Our General Agents and Field Claim Managers work with you on every allegation. They average more than 15 years experience working with doctors and the legal system.

Why do more than 60,000 doctors trust their professional reputation and personal assets with us? No other company combines nearly a century of experience with financial strength and the local service provided by The Medical Protective Company.

ACCREDITATION: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education for physicians. The Medical College of Pennsylvania and Hahnemann University designates this continuing medical education activity for a total of 8 hours of Category 1 of the Physician's Recognition Award of the American Medical Association.

Protect Your Business: Keep Timely Minutes

Your medical practice's meeting minutes are *legal documents*. They can keep you out of trouble—or at least mitigate trouble—if they are up to date and accurate. Or they can cause you trouble if they are inadequate or nonexistent.

If your practice does not take meeting minutes, start doing so. Update your minutes file or book after every regularly scheduled meeting (in most smaller practices, this means the annual meeting) and after each ad hoc meeting.

Annual corporate meeting minutes may include, for example, authorizing pension contributions, electing corporate officers or directors, deciding how to divide practice income, or declaring a dividend. When you add a new physician to your practice, refer to that decision in your minutes, attach the employment agreement to the minutes, and keep that agreement in your minute book.

For your ad hoc meetings, keep a contemporaneous record that reflects such issues as considering an offer to merge the practice or join a network, making shareholder loans, adopting a pension plan, or replacing a departing physician.

Meeting minutes should reflect the significant actions of your practice as a business. Address the issues raised, record the vote(s) of the board or shareholders, and register the results. The commonwealth mandates one annual shareholders' meeting, but the corporation can adjust that by making the appropriate changes in its bylaws.

Not only meetings, not only minutes

Make the proper notations—and reflect it in the corporate records—if you opt to circulate a document to obtain shareholder approval of some action, rather than scheduling an actual meeting. This device can save time, especially if the practice's shareholders are physicians working different schedules and/or at multiple offices.

If, for the convenience of your practice's shareholding physicians,

you opt to meet by phone, take the minutes of that meeting as well. Tape record the proceedings if you need to do so. Secure the written consent of all parties to the meeting in advance. You also may want to record their consent at the start of the meeting.

Someone—usually an attorney—should review your corporate agenda before a meeting to make certain that proposed actions are appropriate and review who has what authority at what level. After the meeting, the minutes should again be reviewed: Do they need to be updated to reflect any action the shareholders took?

“Your medical practice's meeting minutes are legal documents. They can keep you out of trouble...if they are up to date and accurate.”

Legal respect

Everybody knows that some documents have obvious legal power. In your medical practice, patient medical records, billing records, and your practice agreements fall into this category.

Minute files or books also demand the same respect. Just as any record, report, or other notation (paper or electronic), minutes are to be used as proof of what actually did or did not happen at a meeting. They are also your evidence of decisions that were or were not made by a practice's shareholders or directors. They are routinely reviewed during tax audits and/or corporate legal actions (e.g., mergers).

As an example, consider that your compensation—salary, benefits, and

The Health Care Group®

bonuses—should be reflected in your minutes. Why? One reason is to dissuade the IRS from the notion that you were not entitled to the level of compensation that you were paid because some of it really constituted money that should have been paid as a dividend. Or, if you are paying deferred compensation to a former member, a document and a notice of this corporate action in your minutes can help substantiate why you deducted that expense.

Is your practice really a corporation?

Not going to the expense and bother of keeping your corporate documentation could contribute to problems for the corporate shareholders, in terms of both taxation and personal liability issues, if a plaintiff can make a solid case that your practice does not entirely function as a corporation.

If a plaintiff argues successfully that your practice does not always meet all the criteria to be considered a corporation, it could be ruled that the corporation exists, but as an “alter ego” to your practice. Then, if the plaintiff can prove that your practice acted outside the corporate persona and caused the plaintiff damages, the shareholders could be personally liable.

It will take no more than a few hours—and probably, in many cases, only a few minutes—for your practice to keep its minutes file or book up to date. Keep all of your important documents here to avoid confusion later. Consider this time and effort to be at least an exercise in corporate necessity, and, if your practice's corporate status does come under attack, insurance against losing significant amounts of money.

The contributing author, Sandra E. D. McGraw, JD, MBA, is a principal attorney and consultant with The Health Care Group® and Health Care Law Associates, PC, based in Plymouth Meeting.

3A SYNDROME

Edwin Lee, MD; Larry N. Merkle, MD, FACP; Chris C. N. Chang, MD

INTRODUCTION: The 3A syndrome, a triad consisting of adrenal insufficiency, achalasia, and alacrima, is a rare condition. Its etiology remains unknown. We present a case of 3A Syndrome in a young male patient.

CASE PRESENTATION: Our patient is a 14-year-old male with known Addison's Disease and a lack of tearing since age two. He presented with a recent history of nocturnal coughing, dysphagia, regurgitation, and was found to have a mediastinal mass on chest x-ray. There was no past medical history of seizures. He did have a mild learning disability.

A physical examination revealed a somewhat thin-appearing, white male with normal height, Tanner Stage 3 pubertal development, normal skin pigmentation, and no neurological dysfunction. There were

no skin rashes, fissured palms, unequal pupils, or postural hypotension. His medications, prior to surgery, included hydrocortisone 15 mg in the morning and 10 mg in the evening. After a full evaluation, he was found to have achalasia by means of a barium swallow.

Achalasia is a motor disorder of the esophageal smooth muscle and failure to relax the lower esophageal sphincter with swallowing. The barium swallow above has the classic findings of esophageal dilation with beak-like narrowing representing the non-relaxing lower esophageal sphincter (LES).

The patient underwent corrective surgery for his achalasia. He also recently had a positive Schirmer's test to document alacrima. He has no neurologic abnormalities at this time.

DISCUSSION: The 3A Syndrome was first reported in 1978 by Allgrove, et al¹ and has been found to be

associated with neurological abnormalities, including hyperreflexia, muscle weakness, dysarthria, ataxia, impaired intelligence, and abnormal autonomic function especially postural hypotension. Grant, et al. published a recent review on 20 patients with 3A Syndrome and noted a significant association with neurological, especially autonomic function abnormalities. The achalasia, alacrima, and neurologic abnormalities may have a common origin, for example, deletion of an autosomal DNA or autoimmune mechanism associated with Addison's Disease.²

IT'S A FAMILY AFFAIR... THE 1996 LEADERSHIP CONFERENCE

Mark your calendar now...

APRIL 19-21, 1996...

and plan to attend the Pennsylvania Medical Society's Leadership Conference at the Lancaster Host Resort and Conference Center. This year's conference has something for everyone in the family...

- New weekend dates...Friday through Sunday
- Outstanding speakers discussing the latest issues affecting health care
- Hands-on workshops, such as public speaking, on-line computer services, leadership development, stress management, ethics of managed care, and more
- Educational programs for the kids
- Time to enjoy golf, tennis, swimming, or Lancaster's many attractions and shopping outlets

Hold the dates...More details will be coming soon!

Dr. Soisson

Ferdinand L. Soisson Jr., MD, a Johnstown gynecologist and member of the State Society's board of trustees, was elected to the Cambria County Board of Commissioners.

The State Senate has unanimously confirmed **Soloman Luo, MD**, a Pottsville ophthalmologist, as a member of the State Board of Medicine.

Peter Pizzutillo, MD, was appointed co-chief of the Section of Orthopedic Surgery, St. Christopher's Hospital for Children, and professor of orthopedic surgery and pediatrics, Medical College of Pennsylvania and Hahnemann University School of Medicine, Philadelphia.

C. McCollister Evarts, MD, senior vice president for health affairs and dean of the College of Medicine, Penn State's Milton S. Hershey Medical Center, was appointed chairman of the board of directors of the Association of Academic Health Centers.

William A. Buchheit, MD, vice chairman, Department of Neurosurgery, Thomas Jefferson University Hospital, Philadelphia, was named vice president of the American Association of Neurological Surgeons.

Dr. Savard

Marie Savard, MD, director, Center for Women's Health, Medical College of Pennsylvania and Hahnemann University, Philadelphia, was selected from a nationwide pool of applicants as a

contributing editor for *Woman's Day* magazine.

Joseph A. Marasco Jr., MD, chairman emeritus of radiology, St. Francis Medical Center, Forbes Health System, and Ohio Valley General Hospital, Pittsburgh, was awarded the American College of Radiology Gold Medal.

The College of Physicians of Philadelphia has appointed **Marc S. Micozzi, MD, PhD**, executive director.

Ronald B. Herberman, MD, director, University of Pittsburgh Cancer Institute, was appointed associate vice chancellor for research, Health Sciences, University of Pittsburgh.

Philadelphia College of Osteopathic Medicine has appointed **Harry Morris, DO**, chairman, Department of Family Medicine.

Daniel B. Rustalis, MD, was named chief, Division of Urology, Department of Surgery, and associate professor of surgery and of pathology and laboratory medicine, Medical College of Pennsylvania Hospital and Hahnemann University, Philadelphia.

Stuart I. Myers, MD, was appointed chairman, Department of Surgery, Temple University Health Sciences Center, Philadelphia.

Dr. Naccarelli

Penn State's Milton S. Hershey Medical Center has appointed **Gerald V. Naccarelli, MD**, as chief of the Division of Cardiology, director of the Penn State Cardiovascular

Center, and professor of medicine.

Carlo M. Croce, MD, director, Jefferson Cancer Center, professor of microbiology and immunology, Jefferson Medical College, and chairman of the department for Thomas Jefferson University, Philadelphia, received the 1995 Robert J. and Claire Pasarow Foundation Medical Research Award.

The Philadelphia Association for Health and Physical Education, Recreation, and Dance awarded its Community Service Award to **Pekka Antero Mooar, MD**, assistant professor of orthopedics and rehabilitation surgery, Medical College of Pennsylvania and Hahnemann University, Philadelphia.

Audrey Evans, MD, pediatric oncology, The Children's Hospital of Philadelphia, was honored with a Sara Lee Corporation 1995 Frontrunner Award for the humanities. The Frontrunner Awards recognize exceptional women in business, the arts, government, and the humanities.

The family of **Victoria S. Gaspar, MD**, has established a memorial fund to underwrite medical education activities at Magee Rehabilitation. Dr. Gaspar, a resident of Center City, died June 1995 after a long battle with cancer.

BITUARIES

Ralph N. Dougherty, MD, McKeesport University of Pittsburgh School of Medicine, 1936; age 87, died September 28, 1995. Dr. Dougherty was a general surgeon.

Edward D. Holfelner, MD, Haddonfield, NJ Hahnemann University School of Medicine, 1946; age 78, died August 25, 1995. Dr. Holfelner was a urologist.

F. Wayne Jarvis, MD, Palm Harbor, FL Hahnemann University School of Medicine, 1930; age 89, died September 27, 1995. Dr. Jarvis was a general practitioner.

Franklin M. Kern, MD, Kingston University of Pennsylvania School of Medicine, 1934; age 85. Dr. Kern was an obstetrician/gynecologist.

Thomas E. Seifert, MD, Johnstown University of Pittsburgh School of Medicine, 1951; age 71, died September 26, 1995. Dr. Seifert was an obstetrician/gynecologist.

John J. Young, MD, Glenside Temple University School of Medicine, 1964; age 56, died September 14, 1995. Dr. Young specialized in radiation oncology.

Charles R. Nader, MD, New Kensington Age 87; died October 16, 1995. Dr. Nader was a general practitioner.

James H. Spillane, MD, Phillipsburg New York Medical College, 1950; age 68, died September 24, 1995. Dr. Spillane was an otolaryngologist.

• Denotes membership in the Pennsylvania Medical Society at the time of death.

The Educational and Scientific Trust of the Pennsylvania Medical Society provides you with a way to make a significant statement honoring the memory of and paying tribute to your colleagues who are deceased.

Send your tax-deductible memorial gift to The Educational and Scientific Trust of the Pennsylvania Medical Society, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Effective Date, November 10, 1995

DELEGATION SUBMITTING 10 RESOLUTIONS TO AMA

The Pennsylvania Delegation to the AMA has submitted 10 resolutions to the national organization's House of Delegates for consideration at its interim meeting this month in Washington, DC. The resolutions call for the AMA to:

- analyze the relationship between crime, violence, and the distribution and use of illicit drugs, and to study the potential effects of decriminalization of illicit drugs on that relationship;
- study the use for heterologous transfusions of unused blood collected for auto-transfusion;
- reexamine its position on employment-based health insurance and the tax provisions that promote it;
- study a system of competitive bidding for substandard underwriting risks by health insurers as a condition of their being permitted to sell standard policies, along with consideration of other mechanisms for sharing the costs of insuring such substandard risks;
- urge federal action to lift from physicians the financial burden of providing signing interpreters at physician encounters with deaf patients;
- urge legislation or regulation assuring the portability from state to state of medical savings accounts;
- support legislation to mandate the "pass through" of capitation rate money designated for graduate medical education expense or support alternative methods of financing graduate medical education, and urge the federal government to change Medicare and Medicaid reimbursement guidelines to include non-hospital ambulatory surgical centers and other outpatient clinics in their medical graduate education funding;
- adopt policies that assure the availability of non-confidential medical staff committee meeting minutes for all medical staff members, and assure the approval and communication of peer review issues which affect medical staff members;
- not require that recipients of its Medal of Valor be U.S. citizens; and
- amend current policy to require all resolutions include a fiscal note generated by AMA staff in consultation with the author.

Look for results of these resolutions in upcoming issues of PENNSYLVANIA MEDICINE and *Executive Report*.

PROMOTING THE HEALTH OF OLDER PENNSYLVANIANS

Are your elderly patients familiar with PrimeTime Health? The program, administered by the Pennsylvania Department of Aging through the Area Agencies on Aging, began in 1993 and continues to offer activities to promote the health of older Pennsylvanians.

Federally funded through the Older Americans Act, the program focuses on seven priority areas, including exercise and nutrition; chronic conditions such as diabetes, heart disease, and emphysema; incontinence; injury prevention;

mental health; medication management; and alcoholism.

Here's how the program works: Each Area Agency on Aging assesses the health risks and interests of the older adults in their area, and then—with a local advisory board made up of representatives of health-related services and other community agencies—designs the PrimeTime Health programs to be initiated.

If you have older adults in your practice who could benefit from PrimeTime Health, direct them to the PrimeTime Health coordinator at your local Area Agency on Aging, listed in the blue pages of your telephone directory. Physicians may also call the area program coordinator to order PrimeTime Health brochures for their waiting rooms or offer their services to the program.

A Special Message to AMA Members

The historic headline in the *Washington Post* says it all: **Doctors Emerge as Big Winners in GOP Plan!**

What I want you to know is the story behind that headline, because the tremendous gains the AMA is winning for medicine are the result of a long, deliberate, strategic effort to do the absolute best we can for patients and our physician members.

Over the past 10 years, thanks to your membership support, the AMA House of Delegates built a tremendous policy base aimed at getting Medicare on solid footing. Last December we set our agenda and this year, when the time came, we were ready with a 100-page plan that made sense, saved money, and served both patients and their physicians. Leaders of the House of Representatives were so impressed, they used the AMA plan as a model for their own proposal.

At the same time, on your behalf, we carried out a parallel "outside" campaign to aggressively deliver medicine's message in meetings with virtually every member of the House and Senate; through intense discussions with House and Senate leadership; in speeches all over America; and in meetings with editorial writers, reporters, and broadcasters in key media markets.

The results are stunning. The House leadership advanced an extraordinary array of positive changes for patients and physicians that the AMA, advocating for physicians like you, has long sought:

- improvements in the security of traditional Medicare;
- new choices for patients, including medical savings accounts;
- patient protections;
- physician-sponsored networks and antitrust relief;
- liability reforms, with a \$250,000 cap on non-economic damages;
- reform of Stark I and II laws, and easing of CLIA rules; and
- a new graduate medical education trust fund.

The AMA also convinced House leaders of the need to fix Medicare's flawed physician reimbursement formula, along with gradual increases in a single conversion factor over the next seven years. That means our patients are assured continued access to care.

This has been a tremendous effort. But our work for you and your patients is far from over. We need your help. I am convinced that with your continued support, we will be successful.

Lonnie R. Bristow, MD
President, American Medical Association

Hahnemann University Hospital

Presents

ADDICTION MEDICINE

GRAND ROUNDS, WORKSHOP, AND CLINICAL CASE DISCUSSIONS

Wednesday, January 17, 1996
8:30 AM to 12:00 Noon

- Drugs in the Street
- Cocaine and Heart Disease
- Alcohol Addiction
- Cost of Addictive Disorders
- Impaired Physician
- Impaired Student
- The Multi-Admission Addicted Patient

PROGRAM CO-DIRECTORS:

Vincent Zarro, M.D., Ph.D.
Allan B. Schwartz, M.D.

CO-MODERATORS:

Trevor Price, M.D.
Barbara A. Schindler, M.D.
Vincent Zarro, M.D., Ph.D.

CASE PRESENTERS:

Mary Ellen Bradley, MSW, CAC
Barbara A. Schindler, M.D.
Vincent Zarro, M.D., Ph.D.
Penelope P. Ziegler, M.D.

VISITING PROFESSOR:

David E. Smith, M.D.
President, American Society of Addiction Medicine
Associate Clinical Professor of Occupational Medicine
and Clinical Toxicology
University of San Francisco
San Francisco, CA

LOCATION:

Alumni Hall, 2nd floor
15th Street between Vine and Race
Philadelphia, PA

For information, phone: 215-762-8695

ACCREDITATION: The Medical College of Pennsylvania and Hahnemann University is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to sponsor continuing medical education for physicians. The Medical College of Pennsylvania and Hahnemann University designates this continuing medical education activity for 3.5 hours of Category 1 of the Physician's Recognition Award of the American Medical Association.

MANAGED CARE

Associate Medical Director

Blue Cross of Western Pennsylvania, the region's leading managed care and health insurance corporation is seeking a Board Certified Primary Care Physician who is interested in working in partnership with hospitals and physicians to come up with creative/innovative solutions to create efficient ways to streamline healthcare operations and reduce unnecessary administrative costs. We are seeking an enthusiastic, hardworking physician who has the ability to make difficult decisions and solve difficult problems and is willing to devote their full time attention to making an impact in improving our health care delivery system and patient outcomes and customer satisfaction. Someone who has the ability to analyze data and uncover trends, who embraces CQI principals and is willing to implement corrective action plans. We are in need of a creative individual who is not afraid to discover and implement new concepts which support the organizations mission and objectives, someone who can influence other physicians, medical groups and hospital personnel to adhere to jointly developed guidelines and policies and can develop positive physician/hospital relations. There are positions available in Pittsburgh, Erie and Johnstown.

Additional responsibilities will include:

- Physician oversight of Keystone Health Plan West. Blue Cross Point of Service and other managed care responsibilities of Blue Cross of Western Pennsylvania/ Keystone Health Plan West, including indemnity and Medicare.
- Coordination of activities with staff for multidisciplinary health care networks in geographically defined regional location.
- On-call availability of administrative only functions will be necessary, including weekends.
- Travel to physician offices and hospital sites will be required.

The Successful Candidate Will Possess the Following Qualifications:

- Board certification in a primary medical specialty and current licensure is required.
- Demonstrated clinical excellence in their specialty along with current knowledge of clinical practice concerns and issues.
- Excellent communication skills, the ability to speak in public, well developed interpersonal skills.
- Demonstrated experience in working with physicians in a close collaborative fashion to effectively modify practice patterns.
- Must have demonstrated commitment to the managed care philosophy.

For consideration send resume to:

New Openings Daily! FP, IM, PEDS, OB—Call now for details on Allentown, Lancaster, York, Cincinnati, Boston, Kansas City, Houston, St. Louis, Indianapolis, Columbus, Richmond, Rochester, Syracuse, Tampa, Miami, Cleveland, Detroit, Milwaukee, Chicago, Buffalo plus over 2,000 rural communities. We track every community in the country. The Curare Group, Inc. (800) 880-2028. ID #C150MAB.

Cardiologist—Non-invasive BC/BE sought to join 12-member, private practicing cardiology group in Southcentral Pennsylvania. Personnel Director, Suite 3, 1000 North Front Street, Wormleysburg, PA 17043.

BC Family Practitioner wanted to join pleasant internal medicine practice in S.E. Pennsylvania. Minutes from Philadelphia. Competitive salary and benefits package. Send CV to Box 415, PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820.

Part-time Position available, day, evening, or weekends. Modern urgent care center, suburb of N.E. Philadelphia. Excellent opportunity for resident or practitioner seeking to supplement income. Contact Dr. Kravitz (215) 638-0666.

Family Medicine/Internal Medicine—Procedure-oriented, comprehensive, and stimulating multispecialty outpatient medical practice in attractive suburb of northeast Philadelphia, desires additional full-time staff physician. Ultramodern facility with full on-site diagnostic and therapeutic support. Attractive salary, full benefits package, and long-term security potential makes this an opportunity that is most desirable for the stable, career-oriented applicant. Contact Dr. Kravitz (215) 638-0666.

Pittsburgh, PA—IM/FP. An outstanding group, consisting of seven internists, is seeking a BE/BC internist or family practitioner to join their well-established and growing practice. This group, which has been together for more than 11 years, admits patients to a major tertiary care teaching facility (containing an internal medicine residency program). An opportunity exists for the new associate to practice in the northern or eastern sections of Pittsburgh. Enjoy living and working in a city which provides professional sports teams, a world-renowned symphony, excellent school systems, and quality, affordable housing. For information, please contact Kristin Ferguson at: Daniel Stern and Associates, The Medical Center East, 211 N. Whitfield Street, Pittsburgh, PA 15206. Call (800) 438-2476 or fax (800) 892-2781.

Family Practice—Eastern Great Lakes. Thriving practice in a beautiful, small, college town, overlooking a pristine lake. Competitively salaried up to \$130K. Call of 1:4. Tertiary hospital with 489 beds. Close to three major metro areas. For details, contact Bernie Wieseemann at (800) 546-0954, ext. 3814, or fax CV to: (314) 726-3009.

IM AND FP—Pittsburgh Area: Secure, well-established group, four locations—suburban or semi-rural, good call groups, excellent salary, bonus, and benefits. Call Melissa McMurray at (800) 765-3055.

Academic Geriatrician—Third full-time geriatrician sought for expanding division in teaching hospital. Major responsibilities include inpatient and outpatient services, education, and research. Salary and benefits are competitive and commensurate with qualifications. Candidates should be board certified in internal medicine, and be eligible or have passed the qualifying examination in geriatric medicine. Respond with CV to: John Brungo, MD, Chairman, Department of Medicine, Mercy Hospital, 1400 Locust Street, Pittsburgh, PA 15219-5166.

Board Certified Pediatrician for Western Pennsylvania University Town. Join two successful, well-respected pediatricians who offer a competitive financial package and partnership within reasonable time. Excellent office facility within 10 minutes of the hospital. This so-

phisticated, friendly area is one hour to a major city. Call or fax your CV to: Lois Quinn, Quinn Executive Search, Inc. (800) 466-2060 or fax (216) 758-8957.

Pittsburgh, PA—(IM/FP). Excellent opportunity for family practitioner or internist to join well-established, busy practice. Enjoy two beautiful, modern offices located within close proximity to admitting hospitals. Join the staff of a major tertiary-care teaching institution with a highly regarded internal medicine residency program. Competitive compensation/benefits leading to partnership. For more information, please call Daniel Stern & Associates at (800) 438-2476 or fax (800) 892-2781.

Pittsburgh, PA (IM/FP). A prominent, well-trained internist is seeking an associate for his busy practice located in the beautiful South Hills area. Enjoy practicing in two modern offices located on the campuses of the admitting hospitals. A very attractive call schedule is being offered, in addition to an excellent compensation/benefits package. Opportunity to live and work in a community providing quality, affordable housing, excellent school districts, and access to a variety of cultural and sporting events. For more information, please forward curriculum vitae to: Daniel Stern & Associates, The Medical Center East, 211 N. Street, Pittsburgh, PA 15206. Call (800) 438-2476 or fax (800) 892-2781.

POSITION WANTED

Seeking position in gastroenterology/internal medicine. Available now. Board certified in internal medicine. Board eligible in gastroenterology. British and U.S. trained. Licensed in Pennsylvania. Contact S.P. Nathan, South Baltimore General Hospital, 3001 South Hanover Street, Baltimore, MD 21230, (410) 787-2728.

MISCELLANEOUS

Vacation Rentals—Marlins Leap Ventura Beach House. The enchanting Pacific stretches out before you, and the majestic channel islands appear within arm's reach. This exclusive gated community on Ventura's spectacular Rincon Beach offers the ultimate in privacy and tranquility. Santa Barbara's superb cuisine, from sushi to southwest, is within 20 minutes. Four-bedroom, two-bath, large fireplace, \$1,200/week. Selected weekly rentals are now being offered. Brochures available. Call Louisa: (805) 643-6500.

CLASSIFIED ADVERTISING

Rates: \$45 per insertion (\$28 for Society members) for the first 30 words or part thereof; \$1.50 for each additional word; \$6 per insertion for a box number. Payment should be in advance. No agency commission is paid on classified advertising.

Submissions: Copy must be submitted in writing to PENNSYLVANIA MEDICINE, 777 East Park Drive, P.O. Box 8820, Harrisburg, PA 17105-8820. For more information, call (717) 558-7843.

Box Numbers: Advertisers using box numbers forbid disclosure of their identity. Written inquiries are forwarded to such advertisers, but no information can be revealed by the publisher.

Word Count: Count as one word all single words, two initials of a name, single numbers or groups of numbers, hyphenated words, and abbreviations.

Do you know someone who needs nursing care in their home?

We have a special person to take care of your special person.

Are your patients entitled and/or eligible for Medicare benefits? If you are not sure call **MEDICAL PERSONNEL POOL** and we will help you get the answer. Bear in mind that a person need not be a Social Security recipient or over 65 to receive Medicare services. People who are disabled for 2 years or more are eligible as are people who are in dialysis for 6 months or longer. **MEDICAL PERSONNEL POOL** provides a full range of **HOME HEALTH SERVICES**, as well as private duty nursing. We provide most of these services in the home as well as in the hospital and nursing home.

New Structure Offers New Flexibility and New Focus

As part of the State Society's Membership Driven Process instituted last year, a new internal structure has been created and is outlined below.

Your House of Delegates in October adopted a series of recommendations that changes the structure of Society councils and committees, making the structure more flexible so the Society can more effectively and efficiently manage its priorities and resources. The recommendations were made by the Committee to Study Council and Committee Structure, formed last year in conjunction with implementation of the Society's new membership driven process.

Structural changes reflected in this chart include:

- combining five administrative councils (Education and Science, Governmental Relations, Medical Economics, Medical Practice, and Membership) into two councils (Health Policy and Advocacy, and Membership and Services);

- appointing new Priority Work Groups based on priorities identified by the board and House;
- transferring the functions of the committees on Aid to Education and Medical Benevolence to the Board of Trustees Executive Committee; and
- eliminating and/or redesignating several committees and task forces of the board to streamline efforts.

Once implemented, these changes will:

- ✓ create opportunities for more practicing physicians to become involved in addressing high-priority issues on a short-term, focused basis, while *not* decreasing the number of participation opportunities or "slots" available;

- ✓ provide for a balance of participation opportunities that 1) serve as a training ground for future Society leadership, and 2) are most attractive to practicing physicians, particularly those who are younger and seek short-term, focused activities;

- ✓ achieve full coordination between *policy-making* and *implementation* functions; and

- ✓ improve the councils' ability to focus on key issues important to the membership.

Next month in PENNSYLVANIA MEDICINE: Look for a listing of council and committee appointments made by newly inaugurated President Jonathan E. Rhoads Jr., MD. ☺

TWO POSITIVE ASPECTS ABOUT PHYSICIANS IN THIS COUNTRY never cease to encourage me: 1) our willingness to share scientific ideas with our colleagues, and 2) our unanimity in the belief that we should do what is best for our patients. I believe that this issue of *Current Concepts in Ophthalmology* will help to fulfill both endeavors in that it relates information useful to the clinician to help provide the highest quality of care for his or her patient.

Physicians in the United States have been exemplary in the scientific arena. There is little doubt that physicians in other countries use our technology, our procedures, our ideas, our data, and our drugs. If emulation is the greatest form of flattery, we should indeed be pleased with our scientific achievements. Nevertheless, we have been less than successful in our political endeavors in promoting what is best for our patients. This became very evident during the formulation of the Clinton healthcare agenda, in which physicians were, to an extent, viewed as a special interest group.

Prior to World War II, many physicians took a more active role in the community and political affairs. It is of note that six of the 55 signers of the Declaration of Independence were physicians. While 239 of 535 members of the 1994 Congress were lawyers, there were only a handful of physicians. Fortunately, or unfortunately, the knowledge base for modern medicine has become so large that it envelops almost all we do.

Why make these points? Because concentrating on the scientific aspects of medicine alone is not enough in this era. Organized medicine has worked hard for the physician and the patient, but the task is overwhelming. Unless we, as practicing physicians, become more involved in the nonmedical aspects of the medical system (educating legislators, becoming legislators, playing a major role in financial decisions made by insurers and hospital administrators, etc.), the finest medical system in the world may suffer, as may the care of our patients. Teaching, research, the advancement of knowledge, and the ultimate goal, the highest quality of care for our patients, may all fall by the wayside if we don't each become personally involved and make our voices known.

This is a time of great change in medicine. Rather than view it as an era of despair for physicians, it should be looked upon as an opportunity for those who are willing to actively make their voices known, for those who take the initiative to formulate and institute new ideas to improve our system. The era of complacency is over for physicians unless they believe their appropriate role is that of a nine to five job, working under a nonphysician who could ultimately have a great deal more to say in patient management decisions than the medical experts.

Can the AMA do it alone? State medical societies? County medical societies? Specialty groups? IPAs? MSOs? Other acronyms? The answer is no. Only by all physicians working together, with the unanimity we've had in our scientific endeavors, can we effect change in the direction we believe is most positive for our patients—for ultimately, what is most positive for our patients will be most positive for us.

Gary C. Brown, MD
Medical Editor

Serious Systemic Complications of Commonly Used Ophthalmic Drugs

Topically administered ophthalmic medications are capable of producing measurable serum concentrations which can cause serious systemic complications. The topical medications most often associated with adverse reactions are those used in the treatment of glaucoma.

Glaucoma is an insidious disease that results in blindness if left untreated. The goal of medical therapy is to control the intraocular pressure, thereby reducing visual loss caused by damage to the optic nerve. Glaucoma is the second most frequent cause of blindness in whites, and the leading cause of blindness in African-Americans, in the United States. Two million Americans have glaucoma, yet only about half are aware of it. Eighty thousand people are blind from glaucoma. Each year 95,000 patients will lose some degree of sight and an additional 5,000 will progress to blindness. African-Americans are four to five times more likely to develop this disease and are six times more likely to be blinded from it.¹ The development of safe, effective optical medications is being pursued since they can stabilize the disease in 75% of cases.

Although there are many acceptable glaucoma drugs in our armamentarium, they all have potentially serious side effects. Eighty percent of the fluid volume instilled in the eye drains into the nasolacrimal duct within 15-30 seconds.² The drops quickly pass through the puncta and are readily absorbed via the nasopharyngeal mucosa, bypassing the liver as a detoxifying organ. This may lead to unacceptable and sometimes fatal side effects.³

An effective way to decrease absorption of medication within the nasolacrimal system is with punctal occlusion. By having the patient close both eyes and placing an index finger over the puncta for one to two minutes, systemic absorption is reduced by 66%.^{4,5} This not only improves drug efficacy, but studies have shown that punctal occlusion allows for maximal drug effect with half of the concentration of prescribed medications.

Commonly used medications include beta blockers, cholinergic and sympathomimetic agents and oral carbonic anhydrase inhibitors. Adverse systemic effects have been identified with all of these medications but are often overlooked as the cause of systemic problems.⁶

Beta-Adrenergic Blocking Agents

Well over 75% of patients taking glaucoma medications in this country are treated with topical beta blockers. The first, timolol (Timoptic, Merck, Sharp & Dohme) was introduced in 1978. Since then, other topical beta blockers have been made available. They fall into two categories: first, nonselective beta blockers—timolol (Timoptic), levobunolol (Betagan), metipranolol (Optipranolol) and carteolol hydrochloride (Ocupress). These drugs bind to both β_1 and β_2 receptors with equal affinity and lower intraocular pressure by suppressing aqueous flow.⁷ In contrast, betaxolol (Betoptic S) is a β_1 specific blocker. In this second category—the β_1 —receptors are mainly blocked, allowing for less inhibition of the β_2 receptors in the lung.

Brain

As clinical experience with topical beta blockers increases, their ability to alter CNS function is more frequently recognized.⁸ The CNS side effects from topical beta blocker therapy include depression, fatigue, hallucinations, lethargy, dizziness, memory loss, bizarre dreams, insomnia, confusion, psychosis and suicide. The National Drug Registry for Drug-Induced Ocular Side Effects reports 3-10% of patients on topical beta blockers may have CNS side effects, and 20 cases of acute suicidal depression have been noted.⁹ Most CNS effects are reversible upon cessation of therapy. Sexual dysfunction and decreased libido are being noted more frequently in patients using topical beta blockers.¹⁰ The cause of the dysfunction can often go unrecognized, since both the patient and physician may dismiss the small dose of topical medication as not significant enough to cause such devastating effects. In most cases symptoms improve with discontinuation of drops. Through patient and physician awareness, these side effects may be identified and dealt with properly.¹¹

Marlene R. Moster, MD

*Attending Surgeon
Wills Eye Hospital*

*Clinical Assistant
Professor
Thomas Jefferson
University*

Lung

The most serious complication of topical beta blockers has been the exacerbation of both restrictive and obstructive pulmonary disease. Blockade of the β_2 receptors produces contraction of bronchial smooth muscle leading to airway obstruction, especially in asthmatics. By 1986, 13 cases of death from status asthmaticus following topical timolol therapy were reported.¹² This may be more common in young children, and caution must be taken in nursing mothers since high levels of timolol were found in breast milk.¹³

The nonselective beta blockers are contraindicated in patients with significant pulmonary disease. Wheezing, dyspnea, apneic spells and respiratory arrest have been documented even after one drop of 0.5% timolol.¹⁴

Betaxolol 0.5%, 1% (Betoptic), a β_1 specific blocker, minimizes the risk of respiratory effects, and causes less decrease in airflow. Betaxolol can be used cautiously in selected patients with pulmonary disease, but it may not be cardioselective enough to avoid respiratory difficulties entirely.

Heart

Topical beta blockers have been implicated in decreasing the pulse rate, causing sinus bradycardia, and aggravating congestive heart failure.¹⁵ Reports of syncope, heart block, fibrillation and infarction have provoked caution about the use of timolol in patients at risk for these conditions.

All the nonselective beta blockers have similar effects on the cardiovascular system: decreased resting pulse and blood pressure, reduced cardiac sympathetic tone, and reduced oxygen consumption during exercise. Betaxolol has somewhat less pronounced adverse cardiac effects, but it has only one-tenth the beta blocking potency of timolol and levobunolol.⁸ This suggests that betaxolol may be a better choice for patients with cardiovascular compromise.

Other Reactions

Topical beta blockers can mask symptoms of acute hypoglycemia in labile diabetics since they are mediated by catecholamines. Male pattern baldness, diarrhea, rashes and worsening of myasthenia gravis have been reported with topical beta blockers.

Oral and topical beta blockers are known to adversely affect plasma lipid profiles. They cause a decrease in high density lipoprotein cholesterol (HDL-C) levels which theoretically may increase the risk of myocardial infarction. Carteolol (Ocupress), a nonspecific beta blocker, appears to reduce HDL-C less than the other topical drugs. It has intrinsic sympathomimetic activity (ISA) which acts as a partial beta agonist to limit the adverse lipid effects.¹⁶

Sympathomimetic Agents

Both epinephrine 1%, 2% (Epifrin, Glaucon) and dipivefrin 0.1% (Propine) have alpha and β_1 agonistic activity. Epinephrine was first introduced in 1900. It lowers intraocular pressure by increasing aqueous outflow from the trabecular meshwork. Dipivefrin (Propine) is a prodrug which penetrates the cornea 17 times better than epinephrine and is hydrolyzed to epinephrine once inside the eye. It is common to place one drop in each eye twice daily. Assuming a drop size of 50 microliters, two drops of epinephrine 1% is a dose of 1mg, approximately twice the dose given subcutaneously for the treatment of asthma.^{17,18} Surprisingly, systemic side effects are relatively uncommon. Headache, thought to be due to sudden vasoconstriction, elevated blood pressure and cardiac arrhythmias have been reported in susceptible patients. Systemic side effects from dipivefrin (Propine) are rare since the drug is inactive until it passes through the cornea. Alpha adrenergic compounds should be used with caution in patients with hypertensive cardiovascular disease, coronary artery disease or patients prone to cardiac arrhythmia. In those patients, dipivefrin (Propine) is the drug of choice.

Apraclonidine

Apraclonidine 0.5%, 1% (Iopidine) is an alpha agonist used to lower intraocular pressure. It does not cross the blood brain barrier and has little effect on blood pressure or heart rate. To date, adverse systemic effects are rare.³

Phenylephrine HCL

Phenylephrine 2.5% is used topically to dilate the pupil during an ocular examination. It has predominantly α -adrenergic effects and readily causes mydriasis and vasoconstriction. Serious cardiovascular reactions including ventricular arrhythmias and myocardial infarctions have been described, especially in the elderly.¹⁹ Caution is recommended in patients with known advanced arteriosclerotic changes, hypertensives on reserpine or guanethidine, cardiac diseases, aneurysms, and insulin-dependent diabetics.

Parasympathomimetic Agents

In 1875, pilocarpine was introduced as a revolutionary drug to treat glaucoma. We are still using the same preparation today, although many newer miotic drugs have been introduced. Toxic nerve gases used in World War II led to the development of the anticholinesterase agents. Miotic medications fall into two groups. The first group, pilocarpine 1/2%-10% and carbachol 0.75%-

3%, are direct cholinergic stimulators that resemble acetylcholine in structure and action. The second group, physostigmine 0.25%-0.5% (Eserine), echothiophate 0.3-0.25%, demecarium 0.125, 0.25% (Humorsol), and isofluorophate 0.025% (Floropryl), are anticholinesterases which potentiate the action of acetylcholine. Since cholinesterase is necessary to inactivate acetylcholine, these drugs have a prolonged effect. All of the miotic medications work by increasing outflow of aqueous through the trabecular meshwork. In general, miotics when applied correctly rarely give systemic effects. Poisoning occurs with increasing dosage and frequency.²⁰ Cholinergic side effects include diarrhea, salivation, bradycardia, diaphoresis, bronchial constriction, nausea and vomiting. Severe overdose can lead to coma with loss of reflexes. The anticholinesterase drugs which are derivatives of insecticides and war gases are absorbed rapidly and are very potent. The contents of a single bottle of isofluorophate (Floropryl) can easily kill a small child.²¹

Glaucoma patients treated with anticholinesterase may require prolonged ventilation if given succinylcholine to induce general anesthesia. These potent drugs can reduce the amount of plasma pseudocholinesterase needed to reverse the succinylcholine, causing prolonged apnea. This potentially fatal situation can be avoided by stopping the medication four to six weeks before surgery.²²

Parasympatholytic Agents (Cycloplegia)

Atropine (0.5%, 1%) drops are commonly used for cycloplegic refraction, to treat chronic inflammation and after glaucoma surgery. The fatal dose of atropine is 100mg for adults and 10mg for children. Since a drop of 1% atropine contains 0.5mg of drug, a single bottle contains enough atropine to kill several small children. Fortunately, humans excrete 50% of the normal atropine dose with 24 hours and most of the instilled drop is washed harmlessly away by reflex tearing.²¹

Central nervous system effects include hallucinations, excitement, and agitation. Atropine stimulation of the cardiovascular system may result in initial bradycardia (vagal stimulation) and then tachycardia. Flushing, dry mouth, skin rash, fever, bladder distention and dysarthria are noted with increasing toxicity. Severe reactions are manifested by hypotension with progressive respiratory depression, coma and death.¹⁹

Carbonic Anhydrase Inhibitors (CAI)

Carbonic anhydrase inhibitors such as acetazolamide (Diamox) and methazolamide (Neptazane) are used in conjunction with

topical eye drops to control glaucoma. They are related to sulfa drugs and lower intraocular pressure by suppressing aqueous formation. Methazolamide is less effective than acetazolamide in controlling IOP, but also has fewer side effects.

Multiple serious systemic side effects arise from the fact that acetazolamide (Diamox), and to a somewhat lesser degree methazolamide (Neptazane), cause a metabolic acidosis that may lead to anorexia, dyspepsia, fatigue and paresthesias. Symptoms of depression, adult failure to thrive and sexual dysfunction have been reported.⁷

Renal stones can form as a result of using a CAI with an incidence 10 to 15 times over the expected rate.²³ The urine becomes more alkaline with less citrate and magnesium excreted, predisposing to calcium phosphate and calcium oxalate stones.

If therapy is continued, the chance of recurrence of urolithiasis is 50%.²⁴ Potassium loss, especially in those patients using simultaneous diuretics, corticosteroids, or hyperosmotic agents are commonly seen with the CAI therapy. The hypokalemia may be severe and both dietary and potassium supplementation may be necessary to prevent cardiac effects. Extra care must be taken to monitor potassium levels in patients on cardiac glycosides.

The most feared systemic complications of CAI therapy are idiosyncratic aplastic anemia, thrombocytopenic purpura, hemolytic anemia and agranulocytosis. Fortunately these occurrences are rare (0.01%) and usually occur 30-60 days after beginning therapy. Monitoring routine CBCs does not predict who will develop the disease.²⁵ Communication between patient and physician is essential to explain the earliest symptoms, which include sore throat, fever, epistaxis, easy bruisability, purpura or jaundice. The mortality rate is 50%, even after immediately stopping the drug. Most patients who have known allergy to sulfa preparations may develop allergy to CAIs. The most common are skin eruptions. Severe hives, edema, papular rash, erythema multiforme and exfoliative dermatitis have all been reported.²⁶ While some skin reactions can be dose related, the medication should be discontinued if allergy is suspected.

Although the topical and oral medications reviewed can produce serious systemic effects, when used properly, the risk of blindness is greatly reduced. It is likely that many thousands of patients would have otherwise gone blind if not for these drugs.²⁵ Good communication between physicians and patients is essential to assure that adverse reactions are identified early and dealt with appropriately. □

The Red Eye

A red eye is one of the more common problems that brings a patient to the physician. In some instances the abnormality is benign, whereas in others it is an indicator of serious ocular and/or systemic disease. The purpose of this article is to help the clinician differentiate among the more frequent causes of the red eye.

It is important for the physician to ascertain whether the patient with a red eye has pain, since the more serious diseases that cause injection are associated with pain. These include acute glaucoma, uveitis, scleritis, and corneal damage. Corneal damage often produces an acute, stabbing pain that is exacerbated with opening and closure of the lids, while acute glaucoma, uveitis and scleritis typically cause a dull ache.

The history is important. Patients with corneal epithelial damage often relate an inciting event in their history. For example, a chemical burn, foreign body in the eye, or contact lens overwear can all often be elicited by questioning. Systemic diseases such as syphilis, sarcoidosis and tuberculosis can be associated with iritis and a red eye, while collagen vascular diseases are frequently seen in conjunction with scleritis.

A list of the more commonly encountered causes of the red eye follows. The entities will be dealt with in corresponding order:

Infections

- acute conjunctivitis*
 - bacterial
 - viral
 - allergic
- blepharitis/meibomianitis*
- corneal infection/ulcer*

Inflammations

- episcleritis*
- scleritis*
- uveitis/iritis*

Trauma

- corneal abrasion*
- foreign body*
- contact lens overwear*
- subconjunctival hemorrhage*

Glaucoma

Infections

Conjunctivitis

Conjunctivitis can be acute or chronic, depending upon the time course. Those cases that are classified as acute usually arise within a period of hours to days. In general, pain is not a prominent feature of conjunctivitis. Nevertheless, there are always exceptions, and acute gonococcal conjunctivitis can sometimes cause marked discomfort. It can be unilateral or bilateral, although unilaterality is more common.

Bacterial conjunctivitis can be caused by any number of organisms, but staphylococcal and streptococcal species are among the most common offenders in the adult population. Hemophilus species should also be considered in children. There is usually a purulent discharge from the lids and marked crusting of the lids upon awakening in the morning. Injection of the conjunctival tissues can range from mild to severe (Figure 1). In marked cases, there is also chemosis

Figure 1: Bacterial conjunctivitis. Marked injection of the conjunctival and episcleral tissues is present, as is chemosis (swelling of the conjunctiva) and purulence.

(swelling of the conjunctival tissues). Mild to moderate cases can be treated with 10% sodium sulfacetamide topical drops QID for one week. A culture is generally not necessary unless severe purulence is present. Even without antibiotic therapy, many cases are self-limited.

If the patient is sexually active and there is severe purulence, the possibility of gonococcal conjunctivitis should be considered. Cultures should be taken and a smear obtained to look for intracellular gram negative diplococci (Figure 2). In this instance, treatment with ceftriaxone, 1gm intramuscularly, in a single dose, as well as aggressive topical erythromycin or bacitracin ointment QID for a two to three week period should be under-

University*

Figure 2: Gonococcal conjunctival smear. The gram stain reveals numerous polymorphonuclear leukocytes with gram negative intracellular diplococci.

taken. Treatment for concomitant chlamydia infection with systemic tetracycline or erythromycin should be considered. Chlamydial conjunctivitis should also be in the differential diagnosis in the younger, sexually active population. A conjunctival scraping can reveal intracellular inclusion bodies. Treatment includes topical erythromycin, as well as systemic erythromycin or tetracycline therapy for three weeks to the patient and their sexual partners.¹

Viral conjunctivitis is often bilateral and may accompany a systemic viral illness. It is typically self-limited, lasts for days to two weeks, and does not require treatment. The purulence is generally minimal. One notable exception, in which there may be severe purulence and foreign body sensation is epidemic keratoconjunctivitis (EKC), a highly contagious infection most often caused by the adeno-8 virus. Preauricular lymph node tenderness often accompanies this variant, as well as itching, but not most other forms of conjunctivitis.

The degree of involvement can vary from moderate discomfort with a watery redness (Figure 3), to severe lid swelling (Figure 4), the presence of pseudomembranes (Figure 5) and severe pain with multiple punctate epithelial defects.

Because of the highly contagious nature of the disease, physicians and other healthcare personnel should always wash their hands and office area after contact with the patient (a 10% bleach solution may be used to clean office equipment and doorknobs). It is spread

Figure 3: Epidemic keratoconjunctivitis of the right eye. A watery discharge is present.

Figure 4: Severe bilateral epidemic keratoconjunctivitis. In addition to marked conjunctival injection and chemosis, severe swelling and periorbital ecchymoses are present.

via the tears, and only about 5% of the population demonstrate antibodies. Treatment of EKC includes topical lubrication with artificial tears. Cycloplegia with scopolamine 1/4% and Celluvisc may help reduce pain from corneal epithelial irregularities. Occasionally topical corticosteroids may be needed if visual acuity is compromised by corneal stromal changes (Figure 6).

The course generally lasts 10 days to two weeks, during which time the patient can be quite incapacitated.²

Allergic conjunctivitis is most often bilateral. Itching is a prominent symptom, and a mucoid discharge is often present. A history of atopy is often elicited. This may also be seen in contact lens wearers, incited by the foreign proteins and/or solutions. Management includes mild topical vasoconstrictors, such as naphazoline four times a day. In severe cases, topical corticosteroids and/or lodoxamide tromethamine 0.1% (e.g., Alo-mide), a mast cell stabilizer, may be indicated.

Blepharitis

Blepharitis is a relatively benign condition which occurs secondary to bacterial growth on the lids, particularly in the region of the lashes. Staphylococcal species are often involved. The meibomian glands may become infected and inspissated (Figure 7). There is often chronic crusting of the lids. Treatment with daily hygiene (lid washing)

Figure 5: Yellow-white pseudomembrane on the lower lid occurring secondary to epidemic keratoconjunctivitis.

is of benefit. In more severe cases, bacitracin ophthalmic ointment at bedtime for two weeks can be effective. Acne rosacea is a prominent cause of blepharitis in the older population, and is usually associated with the typical erythematous lesions. Treatment in this specific instance includes oral tetracycline (250mg PO QID) or doxycycline (100 PO BID) for six weeks. Erythromycin may be used instead for pregnant or nursing women.

Figure 6: Epidemic keratoconjunctivitis. Prominent, subepithelial corneal infiltrates that typically appear during the second week of infection can be seen.

Figure 7: Blepharitis. An infected meibomian gland, manifesting as a yellow pustule, is seen in the center of the lower lid.

Corneal Infection/Ulcer

Corneal infections can be either bacterial or viral. Bacterial infections typically produce corneal ulcers. A corneal ulcer appears as a white infiltrate (Figure 8) and is generally associated with marked pain and injection. A hypopyon may be present. In some instances, the ulcers are multiple. Treatment consists of culture and intensive, topical antibiotic therapy.

Both herpes simplex and herpes zoster can infect the cornea, typically causing dendrites (Figure 9). Zoster infection is often associated with unilateral skin lesions. If the tip of the nose is involved (an area supplied by the nasociliary, as is the globe), there is an increased chance the patient will have a concomitant uveitis.

Herpes simplex corneal epithelial disease is treated with antiviral agents such as trifluorothymidine 1% eyedrops (e.g., Viroptic) nine times a day or vidarabine 3% ointment (e.g., Vira-A) five times per day. Topical corticosteroid use in these cases is generally contraindicated and may contribute to worsening of the epithelial defects. In contrast, with herpes zoster and a concomitant uveitis, topical corticosteroids are indicated. Gentle debridement of the infected corneal epithelium may also be necessary in cases of herpes simplex keratitis.³

Inflammations

Episcleritis

Episcleritis, or inflammation of the episclera, typically presents as unilateral, sec-

toral or diffuse injection of the episclera and overlying conjunctival tissues (Figure 10). It typically occurs in young adults and often in a recurrent manner. Discomfort can be present, but is generally mild. In contrast to the purplish hue encountered with scleritis, the injection seen with episcleritis is most often bright red.

An investigation of underlying causes is usually negative, although associations have been made with collagen-vascular disease, syphilis, gout, herpes zoster, and others (Lyme disease, Crohn's disease).

Treatment can be given with a topical vasoconstrictor/antihistamine (naphazoline/pheniramine) or topical prednisolone 1/8% four times a day for mild problems. For a more severe

problem, oral nonsteroidal anti-inflammatory drugs (e.g., ibuprofen 200-600mg three times a day or aspirin 325-1000mg three times a day with food/antacid).

Scleritis

Scleritis is a much more serious abnormality than episcleritis. It may cause severe pain and can be sectoral or involve the whole eye. The pain is often described as severe boring pain which awakens one during sleep. The discoloration is more purple in color (Figure 11), rather than the bright red seen with episcleritis. Unlike episcleritis, 50% of patients with scleritis have an associated serious systemic disease, commonly rheumatoid or collagen vascular in nature as well as syphilis, gout, and post-herpetic ophthalmicus; less commonly tuberculosis, Lyme disease and sarcoidosis are associated. Treatment with nonsteroidal agents, systemic corticosteroids or immunosuppressants may be necessary.

Figure 9: Fluorescein staining of three herpes simplex dendrites in a case of keratitis. An inferior round area of geographic keratitis is also present and connected to the dendrites.

Figure 10: Diffuse episcleritis, characterized by marked scarlet injection of the episclera and overlying conjunctiva.

Uveitis/Iritis

The uvea consists of the iris, ciliary body and choroid. Inflammation of one or more of these tissues is called uveitis. Iritis is a subgroup of uveitis in which predominantly the iris is inflamed, although the ciliary body is also often involved. In this latter instance, the entity is called iridocyclitis.

The symptoms of iritis include pain, decreased vision, and photophobia. The pain is a prominent feature, arising from spasm in the iris musculature, but can additionally come from ciliary body muscle spasm when this structure is involved. Photophobia, or severe light sensitivity, is not generally seen with conjunctivitis. It can be associated with trauma to the cornea, since traumatic iritis can also accompany corneal tissue damage.

A major sign of iritis is a ciliary flush, injection of the conjunctiva and episclera in

Figure 11: Nodular scleritis. Diffuse injection with a bluish hue is seen in this eye of a patient with a rheumatic disorder.

the vicinity of the peripheral cornea. The pupil may be abnormally small due to scars that have developed from the iris to the underlying lens. The most definitive way to make the diagnosis is to observe white blood cells and proteinaceous exudate (cell and flare) in the anterior chamber with slit lamp biomicroscopy. In severe cases the ciliary flush can be generalized and a hypopyon is present (Figure 12).

ure 12).

The vision can be mildly or markedly decreased with iritis due to cells in the anterior chamber or from macular edema that can accompany the process.

Posterior uveitis (inflammation of the choroid) may or may not be associated with a red eye. The symptoms and signs of posterior uveitis are beyond the scope of this chapter.

Topical corticosteroid drops, usually prednisolone 1%, are used in eyes with iritis and iridocyclitis to quiet the inflammation. In addition, the eyes are usually cyclopleged (e.g., cyclopentolate 1-2% or scopolamine 1/4% three times a day) to alleviate pain and prevent posterior synechiae (adhesions from the iris to the underlying lens).

A workup for underlying systemic disease should also be undertaken in patients who present with iritis or iridocyclitis. While many cases are idiopathic, the most commonly associated abnormalities include syphilis, tuberculosis, sarcoidosis and Reiter's disease.⁴

Trauma

Corneal Abrasion

Patients with corneal abrasion usually present with pain, a severe foreign body sensation, photophobia and blepharospasm.

While a visual acuity should routinely be the first step for any ocular evaluation, abrasions are an exception since the patient often has a great deal of difficulty opening the eye. When a corneal abrasion is suspected by history, a drop of topical proparacaine or tetracaine can be placed in the eye first so that the visual acuity can then be evaluated.

The diagnosis is best made by observing a corneal epithelial defect on slit lamp biomicroscopic evaluation. To facilitate in the diagnosis, a drop of proparacaine or another topical ocular anesthetic agent can be placed in the eye in conjunction with touching a sodium

Figure 12: Severe uveitis. Diffuse injection of episcleral and conjunctival tissues is present, as is a hypopyon (an accumulation of white blood cells in the inferior anterior chamber angle). The pupil was originally constricted, and has been pharmacologically dilated in this photograph.

Figure 13: Fluorescein staining of the corneal epithelial defect in an eye with a large corneal abrasion.

fluorescein strip to the conjunctiva. A prepared liquid combination of anesthetic and fluorescein (Fluress) can alternatively be used. The fluorescein in the tear film pools in areas where the corneal epithelium is absent and fluoresces with a bright green color when cobalt blue light is shined on the area (Figure 13).

Management of corneal abrasions includes treatment with a cycloplegic agent such as cyclopentolate 2% to decrease the ciliary spasm and pain, as well as topical antibiotic ointment (erythromycin) in conjunction with a pressure patch. The double patch should be sufficiently firm to prevent ocular movement under the closed lids. If severe pain is present, oral narcotic agents may be necessary. With larger abrasions, the patch should be changed daily. The corneal epithelium heals at a rate of 1-2mm per day. Thus, a 5mm abrasion could be expected to take approximately three days to heal.

Some special situations preclude treatment with a pressure patch. Corneal abrasions at high risk for infection (contact wearers, scratches from vegetable matter or false fingernails) should receive topical tobramycin drops four times a day, and cycloplegia only. These patients should be examined daily until the epithelial defect is healed.⁵

Foreign Body

Patients with a corneal foreign body experience a picking sensation each time the lids are opened or closed. Corneal foreign bodies are most commonly metallic (Figure

14), but can be glass, organic or any other material. In some instances the foreign matter can be seen with the naked eye, but in some cases slit lamp biomicroscopy may be required to visualize it. As is the case with corneal abrasions, a topical anesthetic agent may first have to be applied to obtain a visual acuity and reduce blepharospasm so that an adequate examination can be performed.

In patients with the sudden onset of a foreign body sensation and no obvious corneal foreign body or corneal abrasion, the possibility of a foreign body under the upper lid must be considered (Figure 15). Superior, linear corneal staining defects can often be seen on slit lamp examination, but the upper lid must be

everted in most cases to see the foreign body. This can be readily accomplished by placing a cotton-tipped applicator at the superior lid crease and pushing down with gentle pressure at the same time the lid margin is pulled out and up with the thumb and forefinger of the other hand. The patient should be asked to look down throughout the procedure.

A corneal foreign body should be removed using the slit lamp for magnification. A drop of topical anesthetic is placed in the eye and a 25 gauge or smaller needle on a syringe can be used to gently flick the foreign body from its resting place in the corneal epithelium. In general, they are displaced quite readily. The eye is pressure patched for 24 hours following the installation of antibiotic ointment (e.g., erythromycin or Polysporin) in the eye. The patient should be examined the next day because of the possibility of developing a corneal ulcer.

Figure 14: Metallic corneal foreign body located centrally.

Figure 15: Metallic foreign body seen with upper lid eversion. The foreign body had caused linear vertical abrasions on the superior cornea.

Contact Lens Overwear

Contact lens overwear damages the corneal epithelium and produces many tiny defects (SPK-superficial punctate keratitis) (Figure 16). Typically, the symptoms become most pronounced several hours after the lenses are removed. Extreme foreign body sensation, lid swelling and photophobia are all prominent features.

The entity strongly resembles "welder's flash," in which ultraviolet light from the arc produces SPK on the cornea several hours after the insult.

Treatment includes the administration of topical anesthetic drops to obtain a vision. Cycloplegia with cyclopentolate 1% and antibiotic ointment (erythromycin/bacitracin) are usually administered. Oral narcotic agents may be necessary for relief of the severe pain.

An important point to be made is that topical anesthetic agents should not be prescribed or given to the patient to take home for any corneal abnormality. Prolonged use of topical anesthetic agents delays corneal epithelial healing and can lead to corneal ulcer formation with perforation.

Subconjunctival Hemorrhage

Subconjunctival hemorrhages are alarming in their appearance, but generally benign (Figure 17). They occur secondary to rupture of small vessels within the conjunctival tissues and form a variably sized area of red overlying the sclera. They may occur secondary to localized trauma, such as rubbing, a Valsalva maneuver, or be associated with systemic arterial hypertension. Nevertheless, in most instances no underlying cause is found.

Figure 16: Innumerable corneal epithelial defects (SPK) seen with fluorescein staining in the eye of a patient with contact lens overwear.

Figure 17: Large subconjunctival hemorrhage.

Subconjunctival hemorrhages usually resolve within two to three weeks. Treatment is generally not necessary, when chemosis (conjunctival edema) is present. Topical artificial tears every two hours, or as needed, may help relieve the minor degree of local discomfort that is occasionally present.

Glaucoma

Glaucoma is damage to the optic nerve, usually occurring secondary to increased intraocular pressure. The intraocular pressure can vary diurnally, but in most instances it is < 20mm Hg.

The most common variant of glaucoma is primary open-angle glaucoma, an entity in which outflow of aqueous through the trabecular meshwork in the anterior chamber of the eye is impaired. This type of glaucoma is painless and can cause progressive and irreversible visual field loss over a period of months to years. It can be detected by yearly ocular examinations in patients over the age of 40 years. Those under the age of 40 years are generally at low risk of having primary open-angle glaucoma. It is a particularly aggressive disease in African-American individuals.

Acute angle-closure glaucoma presents very differently from primary open-angle glaucoma. There is usually severe unilateral pain accompanied by visual loss due to corneal edema. The patient may have recurrent transient episodes of pain and blurred vision with accompanying halos around lights occurring as precursors to a final severe attack. The halos themselves occur as a

manifestation of corneal edema. Conjunctival and episcleral injection is present and the pupil is often mid-dilated since neither the iris sphincter nor dilator muscles function effectively at high intraocular pressures. The ocular pain and/or headache may be so severe that the patient experiences nausea and vomiting, occasionally to the point of dehydration.⁶

A small subgroup of the population (people with hyperopia, or farsightedness) has eyes with a shallow anterior chamber (the anterior chamber is the region located between the cornea and the iris). During life, the normal lens behind the iris increases in size and can push forward, further narrowing the anterior chamber. In some instances the peripheral iris becomes juxtaposed anteriorly against the cornea, completely blocking the outflow of aqueous from the eye and resulting in acute angle-closure glaucoma. This is more likely to happen in dark areas when the pupil is partially dilated.

Therapy for acute angle-closure glaucoma is directed toward urgently re-establishing

the outflow of aqueous from the anterior chamber. Topical hypotensive agents such as timolol maleate 1/2% and apraclonidine 0.1% are administered acutely, as is acetazolamide (500mg), IV or PO, to help lower the intraocular pressure. Topical corticosteroid (e.g., prednisolone acetate 1%) every 15-30 minutes for four doses is also given. After the intraocular pressure has lowered to 30mm Hg or less pilocarpine 2% can be given every 15 minutes for two doses to help constrict the pupil and reopen the anterior chamber angle. Pilocarpine is contraindicated if the angle closure is due to mechanical closure or aphakic/pseudophakic pupillary block. A laser peripheral iridectomy is more definitive, allowing aqueous from the posterior chamber (the area between the posterior iris and the lens) to escape into the anterior chamber and force the iris posteriorly, away from the cornea. □

Diseases of the Cornea

Introduction

The cornea is a highly specialized tissue designed to refract and transmit light. The cornea is 0.5mm thick centrally and 1.0mm thick peripherally and consists of five layers: the epithelium, Bowman's layer, the stroma, Descemet's membrane, and the endothelium. The stroma alone accounts for approximately 90% of corneal thickness.

Despite its thinness, the cornea is a remarkably resilient structure. Normal barriers such as the tear film, the eyelids, and the conjunctiva help provide protection for the cornea. All five layers must be healthy in order to maintain corneal transparency. A large variety of conditions can affect the cornea and interfere with vision. Only the most common corneal diseases will be included here.

Superficial Punctate Keratitis

Superficial punctate keratitis, or SPK, describes non-specific pinpoint corneal epithelial defects that stain with fluorescein. Patients may complain of foreign body sensation, dryness, burning, photophobia, and decreased vision. The etiology of SPK is variable and includes:^{1,2}

Dry Eye Syndrome

Patients with dry eyes have a deficient tear film with abnormal wetting of the corneal

surface. Their symptoms are often exacerbated by wind, heat, smoke, or prolonged use of the eyes. The SPK are characteristically located in the interpalpebral zone not protected by the eyelids (Figure 1). Although dry eye syndrome is usually idiopathic, underlying collagen vascular disease should be considered as a possible etiology in the more severe cases. Certain medications (antihistamines, phenothiazines, oral contraceptives) can also cause dryness. Treatment consists of topical lubricant drops and ointment, temporary or permanent punctal occlusion, and as a last resort, a lateral tarsorrhaphy.

Exposure Keratopathy

Exposure keratopathy is caused by improper closure of the eyelids or an inadequate blink which leads to corneal dryness. Underlying conditions include seventh cranial nerve palsy, lid deformities, proptosis (such as in thyroid eye disease), and nocturnal lagophthalmos (failure to close the eyes during sleep). Clinical findings include inferior SPK, chronic ulceration and vascularization, and corneal perforation. Treatment of the underlying condition is important. Lubrication, taping of the eyelid, and tarsorrhaphy are also beneficial.

Neurotrophic Keratopathy

Neurotrophic keratopathy occurs in corneas with abnormally diminished or absent sensation. Normal corneal sensation is essential in maintaining the health of the corneal epithelium. Acquired cases are caused by damage to the trigeminal nerve, herpes simplex or herpes zoster infection, diabetes, or tumor such as acoustic neuroma. Congenital cases of Riley-Day familial dysautonomia are extremely rare. Treatment involves lubrication, patching, and tarsorrhaphy.

Band Keratopathy

Band keratopathy^{1,2} is a fairly common condition which is caused by deposition of calcium in the subepithelial space and in the anterior portion of Bowman's layer. Its clinical appearance

and location are quite characteristic. The opacification tends to be restricted to the interpalpebral portion of the cornea, beginning in the nasal and temporal periphery and extending centrally thereafter (Figure 2). On slit lamp examination, the calcium plaques appear to have holes, described as "swiss cheese" in appearance.

Etiology is varied and most commonly includes chronic uveitis, especially juvenile rheumatoid arthritis, chronic eye disease such as long-standing glaucoma, and phthisis bulbi. Less common causes of band keratopathy include hypercalcemia (i.e., in hyperparathyroidism, Paget's disease, sarcoidosis), renal failure, chronic exposure to irritants, and idiopathic in the elderly.

Patients may be asymptomatic or may develop a foreign body sensation if the corneal epithelium breaks down over the calcium. Conservative treatment consists of various topical lubricant drops and ointments. Calcium chelation with disodium EDTA (Endrate) may be indicated in cases with refractory irritation or with obstruction of the visual axis. The band keratopathy may recur, and can be chelated as needed. Rarely, the calcium is too dense for chelation and requires surgical excision (superficial keratectomy).

Pingueculum/Pterygium

A pingueculum is a very common lesion which consists of a yellow-white deposit on the conjunctiva at the nasal or temporal aspect of the limbus and represents an area of elastotic degeneration. Pinguecula are usually asymptomatic.

Pterygia, on the other hand, have been a documented source of chronic eye irritation and visual loss throughout history. Associated with sunny and hot climates, the precise etiology of pterygia is still unclear. Derived from the Greek word *pterygion*, or "wing," a pterygium is a growth of hypertrophic conjunctival tissue, subepithelial fibrous tissue, and blood vessels that advances onto the cornea in a triangular fashion (Figure 3). The lesion can become periodically inflamed, can cause irregular astigmatism, and can extend across the cornea to obstruct the visual axis. Surgical excision is indicated when vision is reduced or the patient is sufficiently bothered by

irritation or cosmetic appearance. Simple excision has a relatively high recurrence rate (5-30%), which can be reduced by combining excision with conjunctival autograft and/or supplemental topical Mitomycin.³

Corneal Trauma

Corneal Abrasion

A corneal abrasion is an epithelial defect on the surface of the cornea. Typically caused by minor trauma to the eye, corneal abrasions are very common. Patients present with pain, photophobia, tearing, and foreign body sensation after being poked or scratched in the eye. Clinically, the conjunctiva is injected and the epithelial defect stains with fluorescein, which can be easily seen as a bright yellow-green area with a cobalt blue light (Figure 4). The conjunctiva should be carefully inspected, including eversion of the upper lid, to rule out the presence of a foreign body.

Treatment consists of a topical antibiotic ointment, a cycloplegic agent, and pressure patching for 24 hours. If the abrasion is large, patients should be followed up the next day. Antibiotic ointment is continued for two to three days after the patch is removed. A pressure patch is not applied when the abrasion is at significant risk of infection, such as in contact lens wearers and trauma with vegetable matter or other contaminated substances. Patients should be monitored closely for the development of a corneal ulcer.

Abrasions usually heal without complications. Occasionally recurrent corneal erosions can develop months to years after the abrasion heals.

Figure 5: Corneal foreign body with a foreign body spud.

Recurrent Corneal Erosion

Recurrent corneal erosions are characterized by recurrent attacks of pain, photophobia, and tearing, usually upon awakening. The symptoms typically resolve over several hours. A prior history of a corneal abrasion can often be elicited, but various corneal dystrophies may also predispose the patient to recurrent corneal erosions.

The corneal epithelium may be irregular or an abrasion may be present. Slit lamp examination usually reveals fine corneal epithelial basement membrane changes in the form of map-dot-fingerprint opacities.

Acutely, treatment is similar to the management of corneal abrasions. Once healed, conservative treatment with nightly lubricating ointment or hypertonic saline ointment for several months to years will frequently control the problem. For refractory cases, therapeutic alternatives include bandage contact lens, corneal epithelial debridement, anterior stromal puncture to create scarring of the epithelium to the underlying stroma, and excimer laser phototherapeutic keratectomy which also enhances the adhesion of epithelium to stroma.⁴

Corneal Foreign Body

Patients with a foreign body embedded in the cornea usually present with symptoms similar to a corneal abrasion, which start after something has flown into the eye. It is important to determine the circumstances surrounding the injury. If the injury involved metal forcibly striking metal, such as hammering a nail, the presence of an intraocular foreign body must be ruled out.

The corneal foreign body should be removed at the slit lamp with topical anesthetic and a foreign body spud or a fine gauge needle (Figure 5). A residual rust ring can

often be lifted out of the cornea, but sometimes requires drilling with a small burr. The residual epithelial defect is treated as a corneal abrasion. An infected corneal ulcer can develop at any time in association with a corneal foreign body.

Corneal Laceration

If a corneal laceration is suspected, precautionary measures should be taken to

avoid applying any pressure to the globe that might precipitate extrusion of intraocular contents. The eye should be protected with a shield, and the patient referred immediately for ophthalmologic evaluation. The patient should be instructed not to eat or drink in anticipation of surgical repair. A computed tomography (CT) scan can help determine the extent of injury and locate intraocular and intraorbital foreign bodies.

As with all ocular injuries, it is important to establish the mechanism of injury, since it will often provide valuable information in determining the extent of injury. A partial thickness corneal laceration by definition does not penetrate the globe. If the laceration is small, it can be managed conservatively with antibiotics, cycloplegia, patching and/or a bandage contact lens. If any wound gape is present, it is best to suture the partial thickness laceration.

A full-thickness corneal laceration requires urgent surgical repair (Figure 6). Signs that are suggestive of a perforating corneal injury include an irregular pupil, shallow or

Figure 6a: Corneal laceration with uveal prolapse.

Figure 6b: Same patient after repair of corneal laceration.

flat anterior chamber, hyphema, and prolapse of intraocular contents.⁵

Chemical Injuries

Chemical injuries to the eyes are potentially devastating, and may lead to blindness.

Alkaline agents typically lead to more severe tissue destruction than acids. Alkaline agents (ammonia, lye, and lime) penetrate the eye rapidly by causing saponification of cell membranes. Acids (sulfuric battery acid, hydrofluoric acid) coagulate and precipitate proteins in the cornea, thus limiting ocular penetration.

Immediate, copious irrigation of the eye is indicated in order to remove the offending chemical and neutralize the pH of the ocular surface. Any non-toxic, readily available fluid will suffice. Patients who call from home for advice should be instructed to begin irrigation with water immediately. Once patients arrive for treatment, irrigation should be instituted without delay, even prior to measuring visual acuity. A lid speculum, topical anesthetic, and intravenous tubing connected to an irrigation solution, such as normal saline, will facilitate treatment. Particulate matter should be removed from the fornices. Irrigation should be continued for at least 30 minutes, and even longer if the pH has not returned to neutral.⁵

Mild to moderate chemical burns may cause corneal epithelial defects, conjunctival chemosis and hyperemia, and lid swelling. After irrigation, treatment consists of topical antibiotics, a cycloplegic agent, and pressure patching. Daily examinations are indicated until reepithelialization occurs. Close monitoring is essential to watch for development of infection or corneal ulceration.

Severe chemical injuries can cause corneal opacification and edema, perilimbal blanching, profound chemosis, elevated intraocular pressure, and surrounding skin burns (Figure 7). Acute treatment includes gentle removal of necrotic tissue. Topical antibiotics, a cycloplegic agent, topical citrate and ascorbate, and pressure patching are used. Topical steroids are indicated to reduce inflammation of the ocular surface and anterior chamber, but should be tapered after seven days of use, since they may promote corneal melting and perforation if used longer. Daily examinations, and sometimes

Figure 7: Alkaline chemical burn with corneal opacification and perilimbal blanching.

Figure 8: Bacterial corneal ulcer with hypopyon.

admission to the hospital, are necessary to closely monitor the patient. If corneal perforation occurs during the acute post-injury period, an emergent corneal transplant may be required.

Long-term treatment for severe chemical injuries can include use of artificial lubrication, a tarsorrhaphy, a conjunctival flap, mucous membrane grafting, conjunctival transplantation, corneal transplantation, and keratoprosthesis, although the prognosis for such intervention is poor. Despite all efforts, many patients who suffer severe chemical injuries are left permanently blind.¹

Corneal Ulcer

A corneal ulcer (ulcerative keratitis) is a stromal infiltrate with an overlying epithelial defect. It is a sight-threatening condition that requires urgent diagnosis and treatment. Contact lens wear and/or trauma are frequent predisposing factors.

Clinically, a dense, white opacity appears on the cornea, in the setting of a red eye with tearing and a foreign body sensation. Important findings can include mucopurulent discharge, conjunctival injection, corneal thinning, stromal edema surrounding the infiltrate, anterior chamber reaction, and hypopyon. Corneal scrapings are obtained for smears and cultures. Bacterial infection is the most common etiology of an acute corneal ulcer. Fungal and acanthamoeba infections are less common etiologies.

Bacterial Keratitis

Bacterial keratitis (Figure 8) is commonly caused by Gram positive staphylococcal and streptococcal species as well as Gram

Figure 9: Fungal corneal ulcer.

Figure 10: Advanced acanthamoeba keratitis with typical stromal ring infiltrate.

negative organisms such as pseudomonas. Less common organisms include moraxella, serratia, proteus, and haemophilus species.

Because bacteria are the most common cause of corneal ulcers, and progress more rapidly than fungal or acanthamoeba infections, initial treatment is begun with frequent (i.e., every 30 minutes) topical administration of broad-spectrum, fortified antibiotics such as a combination of cefazolin 50mg/ml and tobramycin 15mg/ml prepared by the pharmacy. Smaller ulcers are often treated with hourly topical fluoroquinolones that are commercially available, i.e., ciprofloxacin (Ciloxan).⁶

Daily examination to evaluate the progression of the ulcer is critical in managing these patients. Hospitalization is indicated in severe sight-threatening infections and in non-compliant patients. Medications are modified according to the clinical response and the culture and sensitivity results. Occasionally, repeat cultures or even a corneal biopsy are needed to identify the causative organism in cases that are not responding to treatment.

Fungal Keratitis

Fungal keratitis, typically seen after trauma with vegetable matter or in immunocompromised hosts, is rare in temperate climates, but much more common in tropical climates. Fungal infiltrates often have feathery borders and are surrounded by satellite lesions (Figure 9). *Fusarium*, *aspergillus* and *candida* are the most common fungal organisms associated with corneal ulcers. Treatment consists of frequent administration of topical anti-fungal agents as well as sys-

temic anti-fungal agents. Fungal ulcers tend to be more resistant to treatment than bacterial ulcers.

Acanthamoeba Keratitis

Acanthamoeba organisms are small, free-living protozoa frequently isolated from water, dust, and air. The diagnosis of *acanthamoeba* keratitis is often delayed since it can be easily confused with herpetic or fungal keratitis. History is important in establishing a diagnosis because contact lens wearers with poor lens hygiene are at particular risk, especially if tap water is used to store or rinse the lenses.

Acanthamoeba keratitis is a relentlessly progressive condition that is characterized by pain out of proportion to the clinical findings (due to perineural involvement), limbitis, lack of response to routine fortified topical antibiotics, and in advanced stages a stromal ring infiltrate (Figure 10). Diagnosis can sometimes be confirmed by identifying *acanthamoeba* cysts on giemsa or calcofluor white stain from corneal scrapings. The organism can be cultured on non-nutrient agar with *E.coli* overlay, but frequently requires corneal biopsy for definitive diagnosis. Treatment consists of prolonged treatment with one or more of the following: topical propamidine isethionate (Brolene), topical polymixin B-neomycin-gramicidin (Neosporin), topical clotrimazole, topical miconazole, topical polyhexamethylene biguanide (Baqacil), and oral ketoconazole or itraconazole.^{7,8}

Surgical Treatment of Corneal Ulcers

Most ulcers respond to appropriate treatment, but the infectious process can progress to involve the entire cornea, even extending into the sclera. Rarely, the cornea can perforate due to advanced ulceration and thinning. Urgent treatment with cyanoacrylate tissue adhesive, and/or a corneal transplant is indicated for perforated corneas in order to preserve the integrity of the eye. Visual outcome is generally determined by the location and severity of the ulcer. Significant stromal scarring involving the visual axis may require a corneal transplant for visual rehabilitation.

Viral Keratitis

Adenoviral Keratoconjunctivitis

Adenovirus types 8 and 19 are usually associated with epidemic keratoconjunctivitis (EKC). Infection can range from a mild follicular conjunctivitis to a severe keratoconjunctivitis with persistent corneal opacities.

Patients usually present with photophobia and a unilateral painful, tearing, red eye. Preauricular lymphadenopathy, follicular conjunctivitis and non-specific punctate keratitis are characteristic, with the second eye soon becoming involved. Pseudomembranes on the tarsal conjunctiva can form during the acute phase and contribute to irritation. Subepithelial corneal infiltrates may appear one to three weeks after onset of the infection (Figure 11).⁹

There is no effective treatment for EKC. Conservative and supportive treatment with lubricant drops and ointment is indicated. Topical corticosteroids may provide temporary relief and aid in resolution of the corneal infiltrates, however, once the corticosteroids are discontinued, the corneal infiltrates may reappear and become refractory to treatment.

EKC is highly contagious and meticulous hygiene is needed to avoid transmission to others.

Herpes Simplex Keratitis (HSV)

Most corneal herpes infections are caused by HSV type 1 and tend to be unilateral. HSV is characterized by periodic recurrences of clinically evident disease. Mechanisms that trigger active viral replication from a latent infection are not completely understood. Commonly recognized stimuli include stress, sunlight, poor health, fever, menstruation, and immunosuppression.

HSV epithelial keratitis is caused by active replication of the virus in the epithelium. Symptoms include redness, pain, foreign body sensation, photophobia, tearing, and blurred vision. The hallmark of epithelial keratitis is the linear, branching dendrite with characteristic "terminal end bulbs" (Figure 12). The edges of dendritic lesions stain with rose bengal, while the central portion of the ulceration stains better with fluorescein.

Treatment of epithelial keratitis includes topical antiviral agents +/- debridement of the infected epithelial cells. Trifluorothymidine (Viroptic) drops or vidarabine (Vira A) ointment used for one to two weeks typically results in uneventful resolution of the epithelial keratitis. Topical corticosteroid therapy promotes proliferation of the herpes simplex virus in the corneal epithelium and is contraindicated in the treatment of epithelial keratitis.^{1,9}

HSV stromal keratitis is thought to be due to the host immune response to viral antigen rather than active viral replication. Disciform keratitis is a distinct type of stromal

Figure 11a: Acute presentation of epidemic keratoconjunctivitis (EKC).

Figure 11b: Typical subepithelial infiltrates occurring one to three weeks after onset of EKC.

Figure 12: HSV epithelial dendrite stained with rose bengal.

keratitis that presents as localized disc-shaped stromal and epithelial edema, an intact epithelium, and associated iritis (Figure 13). A necrotizing interstitial keratitis with stromal infiltrates, ulceration, vascularization, and thinning can be more difficult to manage. Superimposed bacterial infection can further complicate management. Neurotrophic keratitis secondary to HSV induced corneal hypesthesia may also be associated with stromal melting and perforation. Treatment of stromal keratitis may require the use of topical corticosteroids in combination with topical antiviral agents. Oral acyclovir may be beneficial in decreasing recurrences of HSV keratouveitis. Corneal transplantation may be required to repair a corneal perforation or visually rehabilitate a scarred cornea. HSV can recur in the graft.

Herpes Zoster Keratitis

Herpes zoster involving the ophthalmic division of the trigeminal nerve may result in serious ocular sequelae in at least 50% of cases. The characteristic vesicular rash can

Figure 13: HSV disciform stromal keratitis.

involve one or all three branches of the ophthalmic nerve (frontal, lacrimal, and nasociliary) (Figure 14). Potential ocular complications are variable and may include conjunctivitis, episcleritis, keratitis, uveitis, optic neuritis, cranial nerve palsies, ptosis, and post-herpetic neuralgia.

The keratitis seen with herpes zoster can occur soon after the appearance of the rash. Initially, only punctate epithelial changes may be evident. Plaque-like epithelial lesions resembling HSV dendrites may appear acutely or months after the skin rash has resolved. Stromal keratitis characteristically occurs later, and may persist and recur for many years. The keratitis associated with herpes zoster is not sensitive to topical antiviral agents, but usually responds well to topical corticosteroids. Corticosteroids must be tapered very slowly, since a flare may occur if they are stopped abruptly. Neurotrophic keratitis is another potential late complication of herpes zoster ophthalmicus (HZO).

Treatment of acute HZO is with oral acyclovir, 800mg five times daily, for seven days. In order to be effective, treatment should be initiated within a week of onset. Acyclovir shortens the course of the acute eruption, reduces the incidence of subsequent ophthalmic complications, and may reduce post-herpetic neuralgia.^{10,11}

Marginal Keratitis

Marginal keratitis is a term used to describe non-infectious ulceration, thinning, and vascularization of the peripheral cornea. It can be caused by a variety of conditions such as:

Staphylococcal Hypersensitivity

Staphylococcal marginal hypersensitivity is an extremely common condition, especially in patients with chronic blepharitis, as in ocular acne rosacea. It is thought to be due to a hypersensitivity reaction to toxins produced by staphy-

Figure 15: Staphylococcal marginal hypersensitivity with peripheral subepithelial infiltrates.

Figure 14: Vesicular rash of herpes zoster involving the ophthalmic branch of the trigeminal nerve.

lococcal organisms infecting the lid margin. Multiple peripheral subepithelial infiltrates are separated from the limbus by a clear zone (Figure 15). The infiltrates occur most commonly along the inferior cornea presumably because the staphylococcal toxins pool across the lower lid margin.

The epithelium overlying the infiltrates frequently breaks down with resultant fluorescein staining.

Patients typically have chronically inflamed eyelids and experience recurrent episodes of ocular irritation and photophobia. Warm compresses, lid scrubs, and antibiotic ointment should be used once or twice a day on a regular basis to treat the underlying blepharitis and to prevent recurrent flare ups of corneal inflammation. A short course of topical corticosteroids and antibiotics results in quick resolution of the marginal infiltrates. Systemic doxycycline or tetracycline can be used in resistant or recalcitrant cases.⁶

Peripheral Ulcerative Keratitis

The presence of severe, progressive peripheral corneal thinning and ulceration should raise the suspicion of an underlying systemic collagen vascular disease. Often, the ocular disease can precede the clinical manifestations of the systemic disease. The most common collagen vascular diseases to cause peripheral ulcerative keratitis are rheumatoid arthritis, systemic lupus erythematosus, polyarteritis nodosa, and Wegener's granulomatosis. Systemic treatment of the underlying disorder with immunosuppressive agents is indicated. Topical steroids are used with caution. Patient management should be coordinated with a rheumatologist or internist.

Keratoconus

Keratoconus (conical cornea)^{1,2} is a condition in which abnormal thinning and distortion of the cornea causes progressive, irregular astigmatism. The condition usually

starts at puberty, is typically bilateral, though asymmetric, and gradually progresses over many years before stabilizing. An early presenting sign is distorted vision in one eye due to irregular astigmatism. With recent advances in computerized corneal topography, early cases can be easily identified by the presence of classic inferior-nasal steepening of the cornea, before any slit lamp findings are evident.

Slit lamp evidence of keratoconus includes thinning, scarring, and fine vertical folds in Descemet's membrane (Vogt's striae) at the apex of the cone, which is characteristically located below the center of the cornea (Figure 16). A round or oval iron line in the epithelium usually outlines the base of the cone (Fleischer's ring). In advanced cases, the cone may cause a bulge in the lower eyelid when the patient looks down (Munson's sign).

A sudden rupture in Descemet's membrane can cause acute corneal hydrops. The cornea becomes edematous and cloudy. The patient may experience decreased vision and irritation. Treatment is supportive until the break in Descemet's membrane heals over a two-to-three month period. Variable residual stromal scarring may develop.

There are many systemic and ocular associations with keratoconus including Down's syndrome, atopic disease, Marfan's syndrome, Ehlers-Danlos syndrome, vernal keratoconjunctivitis, floppy eyelid syndrome, and aniridia.

Rigid gas permeable (RGP) contact lenses offer significant improvement in visual acuity over spectacles, but do not alter the progression of the disease. Patients with keratoconus are not candidates for refractive surgery. Patients who cannot be successfully fit with RGP lenses are candidates for corneal transplantation with success rates approximating 90%.

Drug Induced Corneal Changes

Vortex keratopathy (corneal verticillata) is characterized by bilateral, symmetrical, golden deposits in the corneal epithelium, which start below the pupil and swirl outwards. This pattern is seen in Fabry's disease as well as in patients taking various systemic drugs such as amiodarone (Figure 17), chloroquine, indomethacin, and chlorpromazine. The deposits are usually asymptomatic and are reversible once therapy is discontinued.¹ □

The Acute Glaucomas: Diagnosis and Management

Introduction

The acute glaucomas are a group of conditions characterized by a sudden rise of intraocular pressure (IOP). This acute elevation of IOP may be secondary to a large number of different causes (Table 1). The acute glaucomas are of special importance to all physicians, as they may be triggered by medications ordered by the patient or by the physician, by examination (dilation of the pupil), and by procedures (renal dialysis). They also are important because the damage caused by a sudden rise of IOP may occur rapidly, within a period of several hours, and may cause permanent blindness. Consequently, recognition of the individual at risk for developing an acute glaucoma is critically important—important to the patient and to all physicians. This chapter will discuss the symptoms and signs of the acute glaucomas, the fundamental aspects of the examination, the differential diagnosis, and the different clinical entities, including gonioscopic evaluation and treatments. Risk factors will be stressed.

Definition of Acute Glaucoma

“Glaucoma” is a condition in which tissue of the eye becomes damaged, at least partially due to pressure which is higher than the tissue can tolerate.

“Acute” is used in contradistinction to the word “chronic”—acute meaning something that occurs suddenly which is usually attended with severe symptoms. An acute glaucoma, then, is a condition in which tissue in the eye becomes rapidly damaged related to pressure higher than the tissue can tolerate.

Classification

The acute glaucomas can be divided into four different types according to the course for the pressure elevation. The first, which I have called “relative pupillary block angle closure,” is a condition in which iris apposition to the trabecular tissues occurs due to a combination of a narrowing of the anterior chamber angle and a slight or marked bowing anteriorly of the iris due to relative pupillary block. Relative pupillary block results from the apposition of the iris to the lens. This causes the pressure in the posterior chamber (posterior to the iris) to be higher than the pressure in the anterior chamber (anterior to the iris). Consequently, the iris is

pushed forward. The thinner and the more flaccid the iris, the more the iris will bow forward in response to the difference in pressure in the posterior and anterior chambers. The various subdivisions of acute glaucoma caused by relative pupillary block are shown in Table 1.

A second type of acute glaucoma is also due to iris apposition against the trabecular meshwork related to a narrow anterior chamber angle. However, here the cause for the angle closure is not the pupillary block. Consequently, I have called this “narrow angle without pupillary block.” (Table 1). An example of this is the closure of the angle that occurs when a cataract becomes so large that it actually pushes the iris up against the posterior surface of the cornea, causing an angle-closure glaucoma. A subdivision of this nonpupillary block glaucoma occurs when the anterior chamber angle is closed due to adhesions developing between the peripheral iris and the trabecular meshwork in the absence of a shallow anterior chamber. These adhesions occur due to a membrane or inflammation, or swelling of the ciliary body, and are not secondary to a narrow anterior chamber angle or to pupillary block. One variant is a very rare condition, the plateau iris syndrome, which is characterized by a deep chamber and a narrow angle unrelated to pupillary block. This type of acute glaucoma can be classified as angle closure not caused by a shallow chamber or pupillary block.

A third type of acute glaucoma is caused by anything that suddenly and completely blocks the flow of aqueous humor from the anterior to the posterior chambers. This is “pupillary block glaucoma.” Here the block is complete, and the pressure elevation is due to the block itself. Frequently, pupillary block glaucoma is complicated by secondary angle closure (an iris apposition type of glaucoma) (Type 1) especially in patients with anterior iris insertions or anatomic narrow angles.

The fourth and final general cause for acute glaucoma is a miscellaneous group of conditions unrelated to angle closure, though this is uncommon. The IOP can rise acutely even with open angles. This type of acute glaucoma is called “acute open-angle glaucoma.” (Table 1).

Table 1

Classification of the Acute Glaucomas	
Clinical Entity	Depth of Anterior Chamber
I. Angle Closure with Relative Pupillary Black*	Shallow
A. Genetic	
1. Small anterior segment	
a. Hyperopia	
b. Nanophthalmos	
2. Anterior iris insertion	
a. Asian race	
3. Spherophakia	
4. Retinopathy of prematurity	
B. Acquired	
1. Large lens	
2. Dislocated lens	
3. Secondary to pupillary block	
II. Angle Closure Without Pupillary Black**	
A. With narrow angle	Varies Usually Shallow
1. Plateau iris syndrome	
2. Large lens	
3. Dislocated lens	
4. Increased pressure in posterior segment	Varies
a. Expanding gas	
b. Suprachoroidal expulsive hemorrhage	
c. Necrotizing tumor	
5. Ciliary body swelling	Shallow
6. Ciliary body rotation	Shallow
B. Without narrow angle	
1. Chandler's syndrome, essential iris atrophy, etc.	Deep
2. Inflammation	
a. Sarcoid, etc.	
3. Neovascularization	
4. Post traumatic angle recession	
III. Complete Pupillary Black Glaucoma	Usually Shallow
A. Iris-lens adhesion	
B. Iris-vitreous adhesion	
C. Iris-pseudophakos adhesion	
D. Iris-capsule adhesion	
IV. Open-angle acute glaucoma***	Deep
A. Following renal dialysis	
B. Trauma	
1. Blood in anterior chamber	
C. Pigmentary glaucoma	
D. Exfoliation syndrome glaucoma	
* Anterior chamber is initially deep, but becomes shallower; secondary angle-closure is common.	
** Angle-closure due to peripheral anterior adhesions not caused by pupillary block or an anatomic narrow anterior chamber angle.	
*** Acute elevation of IOP unrelated to angle-closure.	

Symptoms

The classic symptoms of acute glaucoma are severe pain in the eye in association with blurred or smoky vision. When the IOP rise is marked, the pain can be excruciating, resembling in intensity the pain caused by passage of a ureteral stone. When the rapidity and amount of elevation of IOP are less marked, the pain may be moderate or even minimal, resembling a low grade headache. The pain is related to the rapidity of pressure rise, and not to the absolute level of IOP. Furthermore, the intensity of pain is vastly greater with the first elevation of IOP, and becomes less with each subsequent episode of elevation of IOP. In some cases IOPs may be markedly elevated without any pain. Where the IOP rises slowly, especially after the initial attack, pain may be totally absent.

Therefore, it is not inconsistent for a patient to have an IOP of 50 or 60mm Hg, and yet be entirely comfortable. In contrast, where a person's IOP was 10mm Hg to start with and the IOP rises for the first time to 35 or 40mm Hg, the patient may develop intolerable pain.

The amount of pain that is present appears to be due to three factors: stretching of the nerves, the amount of inflammation, and in some cases ischemia. Where elevated IOP is associated with marked inflammation, pain is almost always present.

Signs of Acute Glaucoma

The classic signs that go along with a sudden, clinically significant increase in IOP are a red eye, dilation of the pupil, and corneal epithelial edema; the cornea loses its lustrous sheen. These signs are by no means diagnostic. Most importantly, they do not allow a sufficiently accurate diagnosis to permit treatment to be directed at the appropriate cause; however, they do suggest acute glaucoma. (Figure 1 is a typical appearance of an eye with a sudden marked rise of intraocular pressure.)

Examination of the Patient

History

A full history is essential. This must include systemic and ocular considerations. Questions that need to be answered include the following: Was there any prior ocular disease known? When did the episode start? Has it gotten worse or abated? What is the effect on vision? If there is pain, how severe is the pain and what has the nature of the pain been? Prior to the episode were there earlier similar episodes? Is there history of recurrent headaches? Have there been episodes of seeing rings around lights or noticing that vision was misty? If there have been headaches or episodes of misty vision, what triggered them? Did they occur after reading, in association with anxiety or anger, or when going into a dark place such as a movie theater? The patient should be questioned whether he or she has any type of glaucoma or has been told in the past that he or she had narrow anterior chamber angles.

Primary angle-closure glaucoma is strongly familial and approximately 50% of siblings or offspring of individuals who have had an attack of primary angle-closure glaucoma will have occludable anterior chamber angles. Consequently, it is essential to obtain a careful family history, specially directed towards the occurrence of attacks of glaucoma in the relatives.

The treatment of acute glaucoma may involve medications or treatments which may cause problems with individuals who are on

Figure 1a: Classic appearance of a patient with acute glaucoma, showing a red eye, with a hazy cornea and a dilated fixed pupil. This acute glaucoma could be due to relative pupillary block, absolute pupillary block, acute neovascularization related to diabetes mellitus, secondary to renal dialysis, or a variety of other causes.

Figure 1b: Slit lamp view showing shallow anterior chamber.

other medications or who have problems with their general health. Since beta-blockers are frequently used in the treatment of acute glaucoma, it is essential to know whether or not the patient has a condition which would contraindicate such use, i.e., asthma, chronic obstructive pulmonary disease, certain types of cardiovascular disease, etc. The epinephrine compounds should be used cautiously in patients predisposed to cardiac arrhythmias. Osmotic agents should be used with caution if at all in individuals who are predisposed to congestive heart failure or have urinary obstruction. The carbonic anhydrase inhibitors are not contraindicated, but should be used with caution in individuals with a history of allergy to sulfa drugs and certain types of renal disease. Patients with S-hemoglobinopathies should probably not be treated with osmotic agents or the carbonic anhydrase inhibitors.

Because acute neovascular glaucoma is a fairly common cause for an acute glaucoma, questions must be asked about a prior history of diabetes mellitus, the symptoms of diabetes mellitus, a central retinal vein obstruction (or a loss of vision which could indicate a central retinal obstruction), a central retinal artery obstruction (or the sudden type of visual signs that could indicate a central retinal artery obstruction), systemic hypertension, and cardiovascular disease.

In addition to the usual questions asked in a social history, the patient also should be queried whether the episode was preceded by an unusual amount of anxiety or anger.

Factors that can trigger an acute attack of glaucoma should specifically be sought out, and are listed in Table 2. Acute primary angle-closure glaucoma can occasionally be triggered by dilation of the pupil, either from topical or systemic medications. The sympathomimetic agents are more likely to be offenders in this regard than are anticholinergics. The sympathomimetics simulate the dilator of the pupil, which pulls against the residual tone of the sphincter of the pupil, increasing the degree of pupillary block and predisposing to the type of angle closure that

occurs in association with relative pupillary block. The anticholinergic medications also can induce an angle-closure glaucoma by dilating the pupil, but since they cause relaxation of the sphincter of the pupil, causing the iris to relax, rather than putting it on stretch, the anticholinergics are less likely to be responsible for inducing angle closure than

are the sympathomimetic agents. Patients who have open-angle glaucoma are not at risk for developing acute angle-closure glaucomas, and consequently topical and systemic agents which dilate the pupil are not contraindicated in patients with known open angle glaucoma. Unfortunately, the informational material provided with medications and in the lay press routinely cautions against the use in "patients with glaucoma" of topical or systemic medications which may dilate the pupil. This is unfortunate, because patients who know they have glaucoma almost invariably have a type of glaucoma which will not be harmfully affected by pupillary dilation. If the patient has been diagnosed as having a glaucoma in association with a narrow anterior chamber angle, usually the patient will have had an iridotomy, and therefore will no longer be at risk for developing angle closure. If the patient has not had an iridotomy, then usually the patient is treated with a topical miotic, which is usually strong enough to prevent pupillary dilation caused by systemic agents such as many types of tranquilizers.

These agents are, then, not contraindicated in patients with "glaucoma." In contrast, some patients do have narrow anterior chamber angles, and most are unaware of such a condition. A narrow anterior chamber is an asymptomatic condition until it develops into frank angle closure. Patients with

unrecognized narrow anterior chamber angles are at risk for the development of acute angle-closure glaucoma in response to pupillary dilation, either with topical or systemic agents. It is these patients in whom agents that may dilate the pupil are either contraindicated or should be used with caution; unfortunately however, these patients with asymptomatic narrow anterior chamber angles are usually not identified as those individuals at risk for developing angle-closure glaucoma.

Table 3 lists some of the risk factors for the development of acute angle-closure glaucoma. A positive family history for acute angle-closure glaucoma is highly significant because narrowness in the anterior chamber angle is inherited as an autosomal dominant. Factors that increase the likelihood that the anterior chamber will be narrow are hyperopia (being farsighted) and age. As the individual becomes older the anterior chamber angle becomes increasingly narrow; occludable angles occur in less than 1% of the population of middle-aged individuals, but in 10% of those over 80 years, and the percentage increases with age. Asians have an anterior insertion of the iris and are more likely to develop angle-closure glaucoma than

are caucasians. Black patients also have a slightly more anterior insertion of the iris than most individuals. Chronic angle-closure glaucoma, which is usually relatively asymptomatic, is common in blacks, but acute angle-closure glaucoma in association with pain and inflammation is rare in black patients. As cataracts become more mature they become increasingly large and cause mechanical narrowing of the anterior chamber angle; thus, increasing cataract is an additional risk factor for the development of angle-closure glaucoma.

A routine review of systems should be obtained as part of the history.

Physical Examination

The examination of the patient should start with a general assessment of the well-being of the individual. Diabetic patients with acute neovascular glaucoma may be seriously ill and in need of immediate care for their systemic problem. The nausea and vomiting often associated with the pain may lead the patient to become hypoglycemic. Elderly patients frequently do not seek care promptly, and may have become severely dehydrated or be in poor health from the severe pain and associated prob-

Figure 2: Blood vessels on the iris surface are a sign of neovascularization, often caused by diabetes mellitus. Other causes include prior central retinal artery or central retinal vein obstruction, chronic inflammation, and intraocular tumors.

lems. Patients with acute glaucoma, especially the elderly, frequently do not localize the source of the pain well; their treatment is often directed at their symptoms of nausea and vomiting, and the eye may be overlooked as a possible cause. A rough estimate of the patient's cardiovascular and pulmonary status is appropriate. While attention to the patient's acute glaucoma is obviously appropriate, and will eventually lead to resolution of the systemic symptoms, the severity of the systemic problems may be such that they take precedence in the immediate management of the patient.

The ocular examination should be done quickly, but thoroughly, so that a tentative diagnosis can be arrived at rapidly and appropriate treatment instituted.

The examination should include evaluation of both eyes, as a comparison between the two eyes is often helpful. The condition of the fellow, uninvolved eye may give important clues regarding the diagnosis. The examination should include an estimate of visual acuity, measurement of intraocular pressure, an estimate of the corneal diameters, and the corneal clarity. The pupillary reactions and the size of the pupil should be

Figure 3: As cataracts develop they become increasingly thick. The enlargement of the cataract can mechanically displace the iris anteriorly, narrowing the anterior chamber angle and predisposing to a relative pupillary block type of glaucoma. In some cases the cataract becomes so large that the iris is actually pressed against the cornea, in which case cataract extraction is necessary to relieve the glaucoma.

Figure 4: The usual cause for a dislocated lens is trauma to the eye. Where a lens becomes dislocated it may predispose to a pupillary block, with a subsequent angle closure glaucoma. Traumatized eyes may also develop acute glaucomas due to trauma to the trabecular meshwork, or blockage of the trabecular meshwork by red blood cells.

determined. Is the pupil in the involved eye dilated and fixed? The iris should be examined for the presence of neovascularization (especially along the pupillary margin), hyperemia, atrophy, or other abnormalities (Figure 2). Are posterior synechiae present? The depth of the anterior chamber should be meticulously evaluated and the two eyes compared in this regard. Is the iris bowed anteriorly? The presence of inflammation or blood, or hyphema in the anterior chamber should be noted. Is the lens clear or cataractous (Figure 3)? Is the lens firmly in position, or does it jiggle with motion of the eye? Is the lens frankly dislocated (Figure 4)? Is there vitreous coming through the pupil in the anterior chamber?

An accurate estimate of the depth of the anterior chamber is essential; this should be made for both eyes. This is best done with a biomicroscope (slit lamp) or with specialized equipment such as the biomicroscopic ultrasound. However, a good evaluation can be obtained merely by using a pen light (Figure 5). The pen light is held at the side of the face (just anterior to the ear) and the light directed toward the bridge of the nose so that the beam of light from the pen light falls on the eye at a right angle to the visual axis. The light, then, should be parallel to the surface of the iris. If the iris is flat, as in normal individuals, then it will not cast a shadow. If,

however, the iris bows anteriorly then the light will illuminate the temporal portion of the iris, but will cast a shadow on the nasal portion of the iris near the pupil, demonstrating the anterior bowing of the iris; the extent of this bowing can be estimated fairly accurately, and gives a fair indication as to the narrowness of the anterior chamber angle itself. Gonioscopy, however, is required to determine with certainty whether or not the angle is open or closed.

The anterior chamber angle should be evaluated gonioscopically, preferably with a lens such as the Zeiss lens which does not require gonioscopic fluid. The avoidance of gonioscopic fluid eliminates the blurring effect of this fluid, and will permit a better view of the fundus later. The configuration of the angle is noted.

Does the iris cover the trabecular meshwork? Is there a hyphema? Are peripheral anterior synechiae noted? Is there a deposition of pigment on the endothelial surface of the cornea which mirrors a positive pigment on the anterior surface of the iris? The angle may be difficult to see due to corneal edema, and where this is present the cornea should be cleared with topical glycerin. The angle should be described according to an accepted gonioscopic grading system. Such a system is shown in Figures 6 through 10. The need to use indentation gonioscopy is shown in Figure 11. Figures 12a and 12b show an anterior chamber angle that appears closed with routine gonioscopy but which can be opened with indentation gonioscopy. In such a case an iridectomy alone is usually adequate treatment. It is important at the time of the initial episode to evaluate the fundus of

Figure 5a, 5b, 5c: Patients with shallow anterior chamber angles are predisposed to developing angle closure. Relative pupillary block causes the anatomic narrow angle to close completely, with elevation of intraocular pressure. Recognition of a shallow anterior chamber angle, therefore, is critically important. Figure 5a shows a normal deep anterior chamber with no shadow on the iris. Figures 5b and 5c show how holding a pen light from the side permits recognizing a shallow anterior chamber. In the shallow anterior chamber the iris casts a shadow, so that the nasal portion of the iris is dark.

(Acknowledgment: *Principles and Practice of Emergency Medicine*. George Schwartz, ed. WB Saunders, 1986.)

Figure 6a and 6b: A gonioscopic grading system must take into account where the iris inserts on the internal surface of the globe. An A insertion is one in which the iris is adherent to the cornea anterior to Schwalbe's line; this is always pathologic, and is typical of neovascular glaucomas or glaucomas associated with conditions such as developmental abnormalities or Chandler's syndrome. A B insertion describes the condition in which the iris inserts behind Schwalbe's line, into the area of the trabecular meshwork. The posterior trabecular meshwork is not visible in such cases and the angle is functionally closed. This is also always a pathologic angle and may have a variety of causes.

When the iris inserts just posterior to the scleral spur so that the scleral spur is visible but the ciliary body is not able to be seen, the angle is designated as a C angle; a C angle may be normal or pathologic. C angles are common in Asians and not infrequent in blacks or patients with dark brown irides. A D type of iris insertion is the most common normal iris insertion, especially in caucasians. D means that the angle is deep and the ciliary body is visible. An E insertion designates an extremely deep anterior chamber angle in which an extensive portion of the ciliary body is visible; E angles are typical of myopes and are more common in young blue-eyed individuals.

Figure 7: A second component of the anterior chamber that needs to be estimated is the angularity. This can be done in two ways: one, using the Von Herick system, in which the width of the space in the peripheral cornea is estimated; or two, shown here, by estimating the angularity between the anterior surface of the iris and the posterior surface of the cornea. Both systems have their advantages and disadvantages. The measurement should be made in the far periphery of the anterior chamber, in the region of Schwalbe's line.

(Acknowledgment: Early Primary Open-Angle Glaucoma: Diagnosis and Management. Little, Brown & Co., vol. 19, no. 1, Spring 1979.)

Figure 8: The third aspect of the anterior chamber angle configuration that needs to be described is the shape of the peripheral curvature of the iris. Where the iris bends anteriorly from its iris route, and then takes a sudden bend to become flatter the iris is described as an s iris. The s stands for sudden. This plateau type of iris configuration is usually not due to relative pupillary block and is not relieved by peripheral iridotomy. A q iris is the opposite of an s iris, in that the iris bends posteriorly, forming a peripheral concavity. The q iris is seen typically in myopes, and is most important to recognize in patients with the pigment dispersion syndrome, where it may be an indication for a peripheral iridotomy to relieve the reverse pupillary block. An r configuration describes a regular curvature of the iris, in which there is neither an anterior or posterior bend. There is little iris bowing in association with an r configuration. An s configuration is a variant of an r, but is used to describe the angle in which the iris slopes steeply anteriorly, forming a slit like angle.

(Acknowledgment: Early Primary Open-Angle Glaucoma: Diagnosis and Management. Little, Brown & Co., vol. 19, no. 1, Spring 1979.)

Figure 9: The angle illustrated here can be called a D40r as the iris inserts into the anterior ciliary body, the angular approach is 40°, and the iris configuration is regular. This would be a normal anterior chamber angle.

(Acknowledgment: Early Primary Open-Angle Glaucoma: Diagnosis and Management. Little, Brown & Co., vol. 19, no. 1, Spring 1979.)

Figure 10: This is the type of angle seen in neovascular glaucoma, in which the iris has become adherent anterior to the trabecular meshwork, closing the angle completely. This angle would be graded as an A40r. Thus, though the anterior chamber is deep, the angle is functionally closed.

both eyes. In the anxiety of caring for the sick patient, and in an effort to break the angle closure attack, sometimes the fundus is not examined, especially where the cornea is hazy. However, a drop of topical glycerin on the cornea will usually clear the corneal edema markedly, permitting an adequate evaluation of the ocular fundus. The nature of the disc of both eyes should be evaluated. This is of critical importance as it effects therapy markedly. If the disc of the affected eye is healthy in appearance, then it indicates that the patient probably has not had a preexisting glaucoma. In such a case the urgency about getting the pressure down is much less marked than in an individual who already has glaucomatous nerve damage. Furthermore, where the optic nerve is healthy, almost invariably treatment with drops or with a peripheral iridotomy will be adequate. In contrast, where the disc already shows advanced cupping (Figure 13), the most appropriate form of treatment in a patient whose angle closure is due to narrowness of the anterior chamber angle or non-inflammatory adhesions is a guarded filtration procedure. In patients with sudden marked elevation of intraocular pressure it is not unusual for the disc to become slightly edematous with hemorrhages on the disc or on the peripapillary retina (Figure 14).

The presence of signs of a central retinal vein occlusion (Figure 15a) point towards a neovascular membrane closing the anterior chamber angle (Figure 15b), and require that the presence of a neovascular glaucoma be ruled out (Figure 2). The retinal signs of diabetes should also be specifically sought. If the patient has diabetes it is also possible that the patient may have developed an acute neovascular glaucoma (Figure 16). The peripheral retina should be examined to see if there is a choroidal elevation. The angle may be closed by ciliary body rotation caused by a suprachoroidal hemorrhage or a choroidal effusion. Intraocular tumors may have similar effects, and may themselves cause a severe secondary glaucoma (Figure 17).

Figure 11: Shows that indentation gonioscopy allows determining adhesions are present. (Acknowledgment: *Ophthalmic Surgery: Principles & Practice*. WB Saunders, 1990.)

Figure 12a: Gonioscopic view of a narrow anterior chamber angle in which no angle structures can be seen. It cannot be determined whether or not this angle is functionally open or closed without indentation gonioscopy.

Figure 12b: The same anterior chamber angle during indentation gonioscopy. The angle can be deepened so that the anterior ciliary body can be easily seen. Knowing this, this anterior chamber angle would be characterized as a (B)D10r.

Figure 13: Advanced glaucomatous cupping is present in this eye. Note the pseudopit inferiorly. This amount of damage would indicate that the glaucoma is chronic.

Figure 14: Edema of the optic nerve is not infrequent in patients with acute glaucomas. There may also be hemorrhages on and around the disc.

Figure 15: Central retinal vein occlusions frequently lead to the development of neovascularization of the iris in the anterior chamber, and a serious acute glaucoma. This glaucoma is best treated with anti-inflammatory agents such as atropine and topical steroids and directing the attention of the neovascularization. Iridotomy is not of help.

Figure 16: Patients with diabetes mellitus may develop neovascularization and acute neovascular glaucomas. The evaluation of a patient with acute glaucoma must include considerations to rule out the presence of diabetes mellitus. Evaluation of the other eye may frequently be helpful in this regard, as in this patient who had an acute glaucoma with diabetic retinopathy in the fellow eye.

Identification of the Specific Clinical Entity Causing the Acute Glaucoma

A differential diagnosis of acute glaucoma has already been provided in Table 1. In most cases the diagnosis will be immediately apparent following a careful history and a thorough examination. For example, the child with a history of prematurity, poor vision since infancy, and a small eye will almost certainly be having an angle closure attack related to the shallowness of the anterior chamber, which is a part of retinopathy of prematurity. The 80-year-old woman who has been farsighted all her life and whose husband recently died will almost certainly be having an attack of angle-closure glaucoma related to relative pupillary block. The 40-year-old man with a 20-year history of diabetes mellitus, deep anterior

chamber angles, and neovascularization of the iris will almost certainly be having an attack of acute neovascular glaucoma. The 60-year-old man from Jakarta with no previous history of ocular or systemic problem is probably having an attack of angle-closure glaucoma related to relative pupillary block.

In some cases, however, differentiation between the various entities that may lead to acute glaucoma is difficult. The importance of "taking the next step" to be sure about the diagnosis, however, should not be underestimated. For example, a patient with severe diabetic nephropathy who presents with severe ocular pain should not be assumed to have either neovascular or relative pupillary block glaucoma. Such a patient must be questioned whether he or she has recently had renal dialysis. Just as an osmotic load in the blood stream can pull water out of the eye and result in a sudden decrease of intraocular pressure, so the elimination of an osmotic load in the blood may allow water to pass rapidly into the eye, causing an acute glaucoma. A patient with an acute elevation of intraocular pressure secondary to renal dialysis obviously should not be

treated with an iridotomy or cyclodestructive procedure; a paracentesis temporarily may lower the pressure sufficiently, and no further treatment may be necessary.

The major goal of the evaluation of the patient is to try to determine the mechanism by which the pressure elevation has occurred. It is for this reason that the classification of the acute glaucomas shown in Table 1 was utilized.

Treatment

In the following discussion it is assumed that the examiner has ascertained the presence of allergy or specific contraindication to medication or treatment. Consequently, where medications are suggested in the following paragraphs they obviously should not

be employed if there is a specific contraindication to their use, such as an allergy. Some of these problems have already been discussed in the section on history. Some reiteration is justified, however: beta-blockers should be avoided in patients with asthma, chronic obstructive pulmonary disease, and certain types of cardiovascular disease; osmotic agents should be avoided in patients with congestive heart failure, urinary obstruction, S-hemoglobinopathy, and should be used with caution in patients with diabetes; carbonic anhydrase inhibitors should be used with caution in patients with renal disease and S-hemoglobinopathy; apraclonidine should be used with caution in patients with advanced optic disc damage; epinephrine compounds should be used with caution in patients predisposed to cardiac arrhythmias; and the miotics should be avoided if possible in patients with a history of retinal tear, retinal detachment or high myopia.

The general principle is to try to break the pupillary block in patients whose glaucoma is due to relative or absolute pupillary block; once the pupillary block has been relieved the intraocular pressure usually will rapidly return to normal, unless the angle has been permanently occluded during the period of iris apposition. In patients who do not have a pupillary block mechanism of their acute glaucoma, the treatment is aimed at lowering intraocular pressure by: decreasing aqueous inflow with medications; decreasing neovas-

Figure 17: This eye has an acute glaucoma related to a necrotic melanoma. Clearly the treatment would be vastly different for this eye than an eye with an acute glaucoma caused by relative pupillary block or neovascularization secondary to diabetes mellitus.

cularization with panretinal photocoagulation, peripheral cryoablation, and anti-inflammatory compounds; decreasing aqueous production by destruction of the ciliary body with transcleral cyclophotocoagulation with a neodymium YAG laser; or in patients with non-inflammatory closure of the anterior chamber angle (i.e., with late stage of pupillary block glaucoma in which the angle has become occluded permanently or with Chandler's syndrome), by developing a draining fistula, such as with a guarded filtration procedure.

It should be obvious that accurate diagnosis is important. The performance of an iridotomy in a patient with neovascular glaucoma will only

make the eye more inflamed. The performance of a cyclodestructive procedure in a patient with early onset relative pupillary block glaucoma would be egregiously excessive therapy. The treatment of acute glaucoma secondary to renal dialysis may involve only watchful waiting, or perhaps a paracentesis caused by blunt trauma in a black patient with sickle cell disease may urgently require a guarded filtration procedure urgently.

Appropriate treatment is based on accurate diagnosis. Because patients with acute glaucomas are frequently seriously ill there's a temptation to rush into treatment before an accurate diagnosis is established. Indeed, supportive measures may need to be instituted immediately, such as rehydration, treatment of hypoglycemia, etc. In most cases, however, the diagnosis can be arrived at quite rapidly, and then treatment may be appropriately directed. If a patient has a glaucoma caused by relative pupillary block, then a low dose of a miotic is appropriate, such as pilocarpine 1% instilled every five minutes for four doses. If the glaucoma is due to an inflammatory type of mechanism, such as in a neovascular glaucoma, then a drop of topical atropine is appropriate, though this is not urgent.

Administration of a carbonic anhydrase inhibitor intravenously is often effective and appropriate. It takes far less time and is safer for most patients to administer 500mgs of acetazolamide intravenously than it is to give intravenous osmotic agents. The intravenous acetazolamide can be given immediately where pressure lowering is urgent, though obviously should be avoided in patients with a history of allergy to acetazolamide, and should be used in caution with patients with a history of allergy to sulfa drugs.

Where the intraocular pressure is high enough that vision is threatened, the intraoc-

Nonspecific Therapy

For Pain

For Inflammation

ular pressure needs to be lowered urgently, literally within a period of minutes. In such cases performing a paracentesis may be appropriate. The eye is anesthetized with a topical anesthetic agent, flushed well to remove excess bacteria, and the patient securely positioned in the biomicroscope. A disposable 30 gauge needle is placed on a syringe from which the plunger has been removed. The needle is cautiously introduced through the cornea, making absolutely sure that the plane of the needle is parallel with the plane of the iris. The needle must never be directed towards the iris or the lens. If the anterior chamber angle is too shallow to allow the needle to be directed in the proper plane then the paracentesis is probably contraindicated.

The degree of urgency of lowering the intraocular pressure is related to the likelihood that the eye will lose vision rapidly and the need to relieve pain. Where the intraocular pressure is around the systolic retinal artery pressure (60mm Hg or higher), blindness can occur rapidly. Pressure needs to be lowered as promptly as feasible. A paracentesis may be appropriate, but in many individuals is too risky. A drop of a topical beta-blocker such as Timoptic, Betoptic, Ocupress, Optipranolol, or Betagan should be immediately instilled.

In patients with relative pupillary block glaucomas the definitive treatment is peripheral iridotomy. However, this is often not the most appropriate immediate treatment. Where the cornea is hazy, the iris hyperemic and close to the cornea, and the patient in pain, a peripheral iridotomy is not an

Table 5

easy procedure and is usually not appropriate. It is better to lower the pressure medically, allow the eye to quiet, and then perform the peripheral iridotomy at that time, usually a day to a week following the acute episode. Attention must be given to the other eye of patients with relative pupillary block glaucomas, and it is often appropriate to perform a neodymium:YAG laser iridotomy on the asymptomatic fellow eye while the symptomatic involved eye is quieting. One reason for waiting for the iridotomy is that performing an iridotomy in an eye with a dilated pupil is far more difficult and hazardous than in an eye with a small pupil. Preferably the pupil should be made markedly miotic, usually with pilocarpine, prior to the iridotomy. This puts the iris on stretch, and allows performing the iridotomy far more peripherally than would be the case where the pupil is not small. The iridotomy should be performed between the 11 and 1 o'clock positions in order to make sure that the iridotomy has the greatest chance of being underneath the lid. If the iridotomy is placed elsewhere it is likely to predispose to postoperative monocular diplopia.

The most critical aspect of performing an iridotomy is meticulous focus. The surgeon must remember to adjust the oculars to his or her own refractive correction in order to make sure that the instrument is properly par focal. Where the focus is accurate it is usually possible to develop a complete and satisfactory iridotomy with one burst of power. Suggested settings are indicated in Table 5. □

Traumatic Hyphema Management

Numerous articles and chapters have been written on the management of traumatic hyphema. Various recommendations and comparisons of therapy have been discussed, including the controversy of admitting or treating patients in home surroundings. Most practitioners lean toward outpatient care. Future managed care may force the ophthalmologist to admit only "disasters"—after the fact!

Terminology

Blood in the anterior chamber (AC) as a result of a severe contusion injury may be described as either traumatic microhyphema or hyphema. The distinction between the two is the former may be diagnosed only with the slit lamp whereas the latter may be seen as gross circulating red blood cells, layering of blood, or clot formation during a penlight exam. It is important to estimate the amount of blood in the anterior chamber either by percent or millimeters documented by a drawing for daily monitoring (Figure 1).

When a gross hyphema is seen, a distinction should be made as to whether it is a "total" hyphema—when the AC is packed with a blood clot—compared to the "100%" hyphema (Figure 2)—when the AC is "full" of circulating red blood cells (with settling the cells assume a certain percentage or level of blood or clot). The term "8-ball" hyphema (Figure 3) is reserved for the black colored clot (this is also a total hyphema). A darker clot usually suggests a non-acute occurrence. Acute injury will usually be manifested by bright red blood (+ clot) whereas, as the clot ages, it darkens and with time will hemolyze (bright red color but usually liquid) and/or areas will show a whitening (fibrinous) change.

The mechanism of injury that results in a traumatic hyphema/microhyphema has

been well described in previous publications. This paper primarily will be concerned with the management recommended for the Wills Eye Hospital patient population.

Past Ocular/Medical History

Pertinent ocular history includes prior best corrected visual acuity (correction being worn at the time of injury), or prior trauma or ocular surgery that may weaken ocular tissues and potentially result in more severe damage. Glasses, frames or lens fragments may result in more severe injury.

Note whether there is a history of any bleeding or clotting problems, hepatic or kidney disorders, cardiovascular or cerebrovascular disease, or possible pregnancy. Therapy may be modified if any of these conditions is present. Each case is considered individually as to what medicines, procedures, and testing needs to be done.

Examination/Studies

The routine evaluation of the patient consists of measuring the best corrected visual acuity and an external exam including motility and confrontation fields. A careful slit lamp examination is essential to determine the degree of AC hemorrhage, damage to the cornea, iris and/or lens. The intraocular pressure (IOP) is measured by applanation

Emergency Services
Wills Eye Hospital*

Figure 1a: Ten to 15 percent hyphema in the anterior chamber.

Figure 1b: At four days after the injury, most of the blood has reabsorbed.

Figure 2a: One-hundred percent hyphema. The anterior chamber is filled with circulating red blood cells.

Figure 2b: By four days after the injury, most of the blood has reabsorbed.

Figure 3: "Eight ball" or near total hyphema. Ninety-eight percent of the anterior chamber is filled with a clot.

tonometry. A dilated fundus exam should be performed in both eyes and, if the media is hazy enough to obliterate an adequate view, a B-scan ultrasound is indicated.

Imaging may be indicated to rule out orbital fractures, the potential of a ruptured globe or intraocular foreign body. CT scans performed at most general hospitals do not include coronal views and should be specifically requested.

All black patients should be screened for sickle cell trait. When an elevated intraocular pressure persists despite adequate therapy in a black patient with a negative sickle screening test, a hemoglobin electrophoresis test should be ordered. Routine blood work is not necessary unless surgery is planned. With a positive history of previous significant systemic abnormality elicited in the history, appropriate studies should be initiated before any systemic medication is given.

Management

The controversy is ongoing whether patients with traumatic hyphema are handled

as inpatients or outpatients. In the majority of cases no difference has been noted in the outcome (i.e., rebleed). Most practitioners do not admit.

We routinely treat patients with gross hyphema as inpatients, and microhyphemas on an outpatient basis. Traumatic microhyphema cases that are high risk such as sickle cell or sickle trait positive patients, or a patient suffering a severe trauma with serious damage to other ocular/orbital tissues, are admitted. When non-compliance by a patient is anticipated or daily travel is inconvenient (distance) we may recommend admission.

The advantages of admitting patients are twice daily exams, early detection of complications (i.e., rebleed) and the possibility for early intervention (medical and surgical). The major disadvantage is that the hospital is not the cost effective environment for any healthcare system.

If patients are followed on an outpatient basis they must be seen daily for four days following the injury. Our highest incidence of rebleed has been between 18 and 48 hours (Figure 4). When following a patient outside the hospital, if a rebleed or uncontrollable increase in IOP develops, immediate hospitalization is indicated.

Our inpatients are placed at bedrest with the head elevated 15-30° (at home one to two pillows) with bathroom privileges. The injured eye should be covered with a hard (plastic or metal) shield without an eye patch. The reason for no patching is to determine when the patient's vision has changed with a rebleed. In our opinion bilateral patching is "cruel and unusual punishment"!

Table 1

Outpatient Management	
Follow for 4 consecutive days: (VA, slit lamp, IOP, funduscopy)	
Activity:	
• Bedrest with head elevated (one to two pillows) • Limited ambulation (bathroom privileges) • Shield eye full time (no patch); may wear glasses to read/watch TV	
Medication:	
• Atropine 1% TID • +/- Topical steroid—prednisolone acetate 1% (depends on patient compliance/potential misuse) • Topical antibiotics QID (epithelial defects); +/- ointment hs. • No aspirin or NSAID—choice is acetaminophen	

Figure 4a: Traumatic hyphema at one day after the injury. An iridodialysis (disinsertion of the iris from the ciliary body) can be seen at the nine o'clock position on the peripheral iris.

Figure 4b: At two days after the injury, the patient has had a rebleed.

Table 2

Inpatient Management	
Fallow BID for 4-5 days: (VA, slit lamp, IOP, funduscopy)	
Routine vital signs	
Activity:	
• Bedrest with head elevated 15-30° • Bathroom privileges (with assistance first 24 hrs. PRN) • Sleep medication PRN • Loxotie of choice • Post-admission day 3: increase activity gradually (walk hall/shower) • Shield eye full time (na patch); NO BILATERAL PATCHING! May wear glasses to read/do homework/watch TV	
Medication:	
<i>Topical =</i>	
• Atropine 1% TID to QID • Steraid: prednisolone acetate (1%) QID to Q2H (awake) • Antibiotic QID to Q2H (awake)—salution day/ointment HS • Antiglaucoma (beto-blacker)=i.e., timolol moleate 0.5% BID/hx asthma—betaxalol HCl 0.25% BID)	
<i>Systemic =</i>	
• Aminocaproic acid (Amicar®) (50mg/kg liquid Q4H around the clock—not divided doses—maximum=30gm/24H Post-admission day 3, if stable, reduce dose to 25mg/kg Q4H Post-admission day 4, if stable, stop Amicar (small clot—early discharge?) Post admission day 5, if stable—discharge (follow-up next day PRN or in a few days—depends an amount of clot or IOP) • Antibiotic for orbital fractures (no nose blowing/nasal decongestant) • Antiglaucoma Carbonic onhydrase inhibitor (acetazolamide=500mg sequel BID/methazolamide=50 mg BID in sickle positive patient) IV mannitol=20% salution, 2ml/kg aver 45 minutes (consider probable need for evocution at this point) • Na aspirin or NSAID—choice is acetaminaphen • Prefer no sedation	

Treatment: Activity

Management in the home setting is an acceptable approach unless we are dealing with a high risk patient and as long as the patient is examined (VA, slit lamp exam, IOP measurement) on a daily basis for at least four days post-trauma (or post first day exam). If the patient is non-compliant (not using medication/not limiting activity), which is typical of many of our patients, admission should be a serious consideration. Limited activity, i.e., sitting in a chair, short walks either in home or hospital floor probably do not exacerbate the condition. An important consideration regarding activity is when the patient is given aminocaproic acid. Careful ambulation (may need assistance)

to the bathroom should be enforced for the first 24 hours. Postural hypotension is the only major potential side effect of this antifibrinolytic therapy. Nausea and vomiting do not commonly occur, however, an antiemetic is routinely ordered on a PRN basis. The potential side effects only last 24 hours.

Patients are allowed to use the uninjured eye for reading, school work, games or to watch television. This is found to be very beneficial to help relieve boredom.

Treatment: Medications

Minimum therapy includes atropine 1% drops at least TID. Without significant corneal epithelial defects prednisolone acetate 1% may be utilized in all inpatients and compliant outpatients. When the corneal epithelium has been severely damaged topical antibiotic drops QID to Q2H (awake) are used. As soon as the defects have healed sufficiently, the topical corticosteroids are ordered QID to Q2H while awake (depending upon the degree of anterior chamber reaction). Topical corticosteroids are definitely helpful at post-trauma day two to three when symptoms of iritis are manifested with an increase in ciliary flush and photophobia (adults will complain "the eye itches").

Systemic medication consists of aminocaproic acid liquid (if not contraindicated) along with an antiemetic as necessary for nausea and vomiting. The dose is 50mg/kg Q4H (around the clock—not divided doses) to a maximum of 30gm in any

Table 3

Aminocaproic Acid (Amicar®) Contraindications

Definite:

- Pregnancy, renal or hepatic disease
- Intravascular clotting problems

Relative:

- History of MI/CVA
- Other systemic conditions evaluated on an individual basis

Exception:

- May withhold its use but if rebleed occurs consult with primary physician as to initiation of therapy with close monitoring

24 hour period. On the third day of hospitalization, if the patient is stable (i.e., no rebleed), we reduce the dose of the antifibrinolytic to one-half (25mg/kg) and allow the patient to gradually increase activities (walking the hall) in the hospital and shower carefully. On day four of hospitalization we stop the aminocaproic acid and observe the patient over the next 24 hour period to estimate the effect of increasing clot breakdown on the intraocular pressure (loose red blood cells "plugging" trabecular meshwork). Discharge is planned for day five. Follow-up may be the next day or in a few days post-discharge depending on the amount of residual blood and IOP.

After the aminocaproic acid is stopped, within a period of 48-72 hours, the intraocular pressure may rise to high levels because of rapid clot breakdown. If the pressure is over 25mm of mercury, we add a beta blocker to the atropine drops and corticosteroid on discharge and recheck the IOP the next day. If, at day four, there is a small clot and we are dealing with a compliant patient (family) we may discharge the patient.

Our choice of aminocaproic acid over systemic steroids (prednisolone 40mg/day) to prevent rebleeding is because of the specific nature of the antifibrinolytic activity of the drug directly counteracting the natural fibrinolytic activity in the anterior chamber.

Secondary Glaucoma

Patients examined soon after the injury may have a slightly increased intraocular pressure (mid or high 20s). When the patient is admitted and placed at bedrest with the head elevated a re-check (30 minutes) of the IOP often reveals a lower level due to a decreased overload of the trabecular meshwork. If however the IOP is over 24mm of mercury, one might incorporate a topical beta blocker. Concern relative to IOP may be related to the age of the patient, condition of the optic nerve, or sickle status.

Inpatients are examined twice a day and if the IOP is still elevated (usually high 20s) we add a systemic carbonic anhydrase inhibitor (usually acetazolamide, 500mg sequels BID). If the IOP has not been reduced to an acceptable level by the next exam intravenous mannitol would be considered ("maximum antiglaucoma therapy"). At this point one should seriously consider the possible need for evacuation or washout of the anterior chamber.

Special Considerations: Sickle Cell

When a patient gives a history of or is tested sickle cell or trait positive, consider the potential need for early intervention (medical/surgical). It is possible for a sickle positive patient with an increasing IOP to lose light perception in a very short time. Cases of microhyphema must be followed closely for increase of the IOP that cannot be controlled with maximum antiglaucoma therapy. The critical IOP level for the sickle trait positive patient should be considered 24mm of mercury or above. Close monitoring of the IOP must be done and vigorous therapy instituted when necessary. If maxi-

Table 4

Indications for Surgery (Non-Sickle Positive)

- Blood staining cornea (surgery ASAP! May do paracentesis to prepore)
- IOP (general rules—consider each case individually—state of optic nerve)
One reading of 60mm Hg (paracentesis ASAP then evacuate)
50mm Hg for 5 days maximum (may do sooner)
35mm Hg for 7 days maximum (may do sooner)
- Duration solid clot pocked in angle (PAS potential)
No longer than 7 days
- "Eight ball" hyphema or total hyphema

Table 5

Surgical Consideration (Sickle Cell Positive)

- No light perception (high IOP)
STAT paracentesis to prepore for washout/evacuation
- IOP 24mm Hg or > on maximum antiglaucoma therapy
- Blood staining cornea (surgery ASAP!)
- Duration solid clot packed in angle (PAS potential)
No longer than 7 days
- "Eight ball" hemorrhage or total hyphema

Table 6

Surgical Procedures

- Porocentesis—only to prepare for washout/evacuation
- Washout—two incision sites, one for inflow and one for drainage
- Expression of clot with limbal incision with viscoelastic (counter pressure)
- Evacuation of clot ("hyphemectomy") with automated instrumentation

therapy is unsuccessful consider early surgical evacuation.

Special Consideration: Children

Children must be considered individually, especially in the amblyopic age group. With occlusion of the visual axis by a persistent clot, vitreous hemorrhage, or blood staining of the cornea (Figure 5), surgical intervention may be considered earlier than in an adult.

We have used aminocaproic acid in children as young as 10 months of age but it is advisable to do so in cooperation with a pediatrician.

Future

Managed eye care will likely result in the demand for outpatient care of patients with traumatic hyphema. Only the multiple system

Table 7

Rehabilitation

- No extremes of activity (work/sports/exercise) for two weeks post-trauma/post first eye exam after injury
Return to light work or school after no AC blood cells noted with slit lamp
- Gradually increase activities during third week post-trauma/first exam
No extremes of lifting, heavy work or sports activities until rest of body soft tissues in shape (danger of pulling muscles or straining ligaments)
- Recommend wearing appropriate, protective eyewear (prefer polycarbonate) when involved at work or play whenever a potential of eye injury exists
- For functionally one-eyed patient strongly recommend the wearing of polycarbonate eye protection all waking hours
- Special consideration for worker (i.e., construction, steeplejack, truck driver, etc.) with permanent visual deficit in injured eye or persistent cycloplegia (residual medication vs. traumatic mydriasis). Safe to drive, climb, etc?
Possibility of a need for change of work.

Figure 5: Corneal blood staining, as manifested by a diffuse rust color centrally, in an eye after a traumatic hyphema.

traumatized patient and/or the potentially high risk patient will be "allowed" admission.

Topical aminocaproic acid is awaiting F.D.A. approval to begin trials. If effective, this drug may very well be our (the patient's) saving grace! □

Ophthalmia Neonatorum: A Clinical Update

History

Ophthalmia neonatorum is an inflammatory disease of the ocular surface occurring in the first 28-30 days of life, classically due to neisseria gonorrhea (GC) infection.^{1,2} This clinical condition is associated with significant clinical and historical importance.¹⁻³ Crede's use of silver nitrate as prophylaxis against "ophthalmia neonatorum" in the 1880s was a remarkable medical and public health achievement, as it decreased the incidence of newborn conjunctivitis from 10% to 0.3%.²⁻⁵ Silver nitrate solution applied to the ocular surface in the immediate post-partum period became mandated by law in many states after its increasing use in the early 20th century.^{4,5}

In the years that this condition has been recognized, prophylaxed against, and treated, changes have occurred in its incidence, clinical presentation, and etiology.^{2,7-13} Several recent studies reporting these changes have recommended varying investigative procedures, laboratory testing and prophylaxis indications and treatment regimens.⁸⁻¹³ In this review, we will attempt to present a clear approach to prevention, clinical and laboratory diagnosis, and treatment regimens of ophthalmia neonatorum.

Incidence and Pathogenesis

The Center for Disease Control reported 900,000 cases of ophthalmia neonatorum in 1986.^{4,13-15} The most common etiologies reflect the infectious nature of this condition and include neisseria, chlamydia, other bacteria (staphylococci, streptococci, hemophilus species, and coliform groups), viruses (herpes simplex 1 and 2) and chemical (silver nitrate).^{1,3-16} The prevalence of all forms of ophthalmia neonatorum is reported to be as low as 0.9% in the United States, but studies of varying populations around the world report a range from 0.04% to 12%.^{2,3,7,8,13-17}

The two most common causes of ophthalmia neonatorum worldwide remain chlamydia and GC.^{1-3,7,8,13-17} The incidence of neonatal chlamydia infection ranges from 1.4 to 4.4 per 1000 live births.^{1,2,7,9} Although a dramatic decrease in gonorrheal infection (0.04% to 1.6%) has occurred in most western cultures, this remains a prevalent problem (3.6%) in some third world countries.^{1,2,7,9,16,18-26}

Reported incidence of positive cervical cultures in third trimester patients for GC is 2.3% to 3.6%, and 5% (range 2-18%) most often reported for chlamydia.^{1,3,21-27} Women infected with GC at the time of membrane rupture impart an 18-50% of neonatal infection and those positive for chlamydia impart a 10-70% chance of infection in the neonate.^{3,21-28} Those women with positive herpes virus cultures from the birth canal are at a high risk for causing ocular (16-23%) and systemic (40-60%) infection of the newborn.²⁹⁻³⁷ Although some studies have suggested a higher incidence of ophthalmia neonatorum in premature neonates, its presence has not been correlated with APGAR score, length of the second stage of labor, or mechanical intervention during delivery.^{2,8-10}

In a study of bacterial flora from the conjunctiva of 100 eyes of newborns in which 75% had positive cultures, Isenberg et al discovered 78.4% of these positive cultures to have been nonaerobic, represented largely by lactobacilli and diphtheroids.³⁸ They suggest that some culture negative (no predominant organism, e.g., bacteria, GC, chlamydia) ophthalmia neonatorum may be due to these organisms. In studies of bacterial conjunctivitis in older age children and adults, the incidence of infections attributed to anaerobes alone have been reported to be from 3.3% to 11.5%.^{1,4,8,10,13,16,27,38} In children from eight months to 14 years of age this is 16.7%. In reports of ophthalmia neonatorum since 1970, the frequency of "sterile" cultures or those due to traditional non-pathogenic organisms cultures has been reported to be 6% to 87%.^{13,27,38-40} These "sterile" infections may in fact be due to anaerobes.

Differential Diagnosis

Although ophthalmia neonatorum is traditionally due to an infectious agent, other clinical conditions may appear similar. Ocular trauma during any stage of labor or delivery may stimulate an inflammatory response in the first few hours to days after birth. This response may behave like silver nitrate toxicity with minimal hyperemia, chemosis, watery discharge, and even corneal clouding (diffuse steamy edema).⁴¹ This can be easily differentiated from ophthalmia neonatorum by obstetric history, unilateral occurrence as well as other signs of trauma such as con-

Figure 1: Neonatal birth trauma showing an intraocular hemorrhage (arrow) in the right eye and conjunctival hemorrhage (arrowhead) in the left eye simulating ophthalmia neonatorum.

Figure 2: Neonate with congenital glaucoma showing enlarged, cloudy corneas with watery discharge and mild hyperemia of the conjunctiva simulating ophthalmia neonatorum.

sions, abrasions, lacerations, and hemorrhages (Figure 1). Congenital glaucoma, if severe, can present at birth with mild conjunctival hyperemia and watery discharge. This is easily differentiated from ophthalmia neonatorum by associated enlarged eye(s), cloudy cornea(s), and increased intraocular pressure (Figure 2). Congenital lacrimal system obstruction also may present with inflammation of the ocular surface, and this can be differentiated by purulent reflux from the nasolacrimal system occasionally associated with a swollen lacrimal sac and overlying skin inflammation (dacryocystitis) beneath the medial canthal tendon (Figure 3). This acute inflammatory process is usually due to hemophilus species and streptococcus pneumonia.⁴² Treatment includes direct massage, topical and systemic antibiotics, occasional drainage of the lacrimal sac, and probing and irrigation of the nasolacrimal system to relieve the obstruction.

Silver Nitrate Toxicity

Clinical Presentation

When Crede's prophylaxis (1% silver nitrate) is properly administered, chemical conjunctivitis occurs in 50-100% of the treated eyes.⁴¹ This is a mild reaction which occurs from 24-72 hours after administration and is characterized by conjunctival hyperemia and some tearing or discharge that clears in one to two days. If higher concen-

Figure 3: Neonate with inflammation of the lacrimal sac (arrow) (acute dacryocystitis) simulating ophthalmia neonatorum.

trations of silver nitrate are used (e.g., 2%, originally used by Crede) or vials are left open for some time prior to use (increasing the concentration by evaporation), severe conjunctivitis may result. There may be pseudomembrane or membrane formation, mucopurulent or purulent exudate, severe edema of the conjunctiva and eyelids, and corneal clouding. This inflammatory reaction can result in corneal neovascularization with resultant scarring in both the conjunctiva and cornea.

Laboratory Findings

Epithelial scrapings or exudate smears from the conjunctiva show a nonspecific inflammatory reaction with a predominance of polymorphonuclear leukocytes (PMN) if there is either a true or pseudomembrane. No pathologic bacteria are seen in the smears or recovered from culture.

Treatment

Prevention of this can be almost uniformly obtained by application of 1% silver nitrate from wax ampules immediately after opening to the neonate's ocular surface, after the skin of the eyelids has been cleansed by two assistants (one holding the lids open and the other applying the solution). This can be performed either in the delivery room or the nursery. Irrigation of the silver nitrate solution from the neonate's eyes after instillation is not recommended with use of the 1% concentration. If this is accomplished, minimal conjunctival reaction is observed which needs no treatment. If severe conjunctivitis occurs then the accumulated exudate should be removed from the conjunctival sac by frequent, careful irrigations. Bulbar to palpebral conjunctival synechiae can be broken with a glass rod. Topical instillation of prophylactic broad spectrum antibiotics (e.g., trimethoprim/polymyxin) and steroids may be needed to prevent or limit damage caused by superinfection or an exuberant inflammatory response.

Neisseria Gonorrhea

Clinical Presentation

Unequivocally, in all cases of ophthalmia neonatorum, neisseria gonorrhea infection

Figure 4: Neonate with early GC infection characterized by lid edema, conjunctival hyperemia, and chemosis with a serosanguineous discharge.

Figure 5: Corneal ulceration and abscess formation (arrow) which may result from direct corneal invasion of GC bacteria.

Figure 6a and 6b: Typical "hyperacute" mucopurulent discharge associated with GC ophthalmia neonatorum.

must be ruled out. If this is not possible, then treatment for GC must be carried out in order that blindness caused by this infection be prevented. Although it can occur any time up to 28 days of life, the incubation period for this infection is usually the first three to five days after birth.^{1,3,18,19,45} Onset more than a week after birth usually indicates post-partum exposure. *Neisseria meningococcal conjunctivitis* can also occur in the newborn and appear similar, and the difference is firmly established by culture characteristics. *Neisseria gonorrhea* in neonates has a slightly milder appearance than GC conjunctivitis in adults and is characterized by three stages. The first stage (infiltrative) is characterized by edema of the lids, severe chemosis, and a watery or serosanguinous discharge (Figure 4). It is during this initial stage that corneal and intraocular invasion can take place (Figure 5). If untreated, the second stage is followed within four or five

days by increasing mucopurulent discharge (purulent) (Figure 6a and 6b). The final (healing) stage occurs after another seven to 10 days and may continue for weeks, depending on the ocular surface or intraocular damage. The inflammatory signs gradually diminish. *Neisseria gonorrhea* is one of the few organisms which can penetrate an intact corneal epithelium. The likelihood of keratitis, corneal ulceration, corneal abscess, and full thickness corneal necrosis is high if there is no treatment. Corneal involvement can lead to irreversible visual loss and even loss of the eye itself.

Laboratory Diagnosis

The organism should be cultured on chocolate blood agar or Thayer-Martin medium at reduced oxygen tension and fermentation studies carried out. Scrapings from the conjunctival epithelium show numerous polymorphonuclear leukocytes (PMN) and gram negative, bean-shaped intracellular (PMN) diplococci. The organisms are easily seen in smears hours before they can be identified by culture.

Treatment

The traditional drug of choice for treatment of GC is penicillin (100,000 units/kg/day aqueous crystalline penicillin G in four divided doses for seven days).^{4,44,46-48,54,65} Because of increased resistance to GC in urban areas, alternative systemic treatment is recommended. This is IV Ceftriaxone 28-50 mg/kg/day for seven days in divided doses every eight to 12 hours. Topical ophthalmic treatment consists of non-antibiotic ophthalmic irrigation solution followed by topical 0.5% erythromycin or 1.0% tetracycline ophthalmic ointments QID for 14 days. Infants must be isolated with wound precautions during the first 24 hours of treatment to avoid spread of infection in the nursery. Ophthalmic consultation is necessary for assessment of ocular disease, prevention of disease severity, and treatment of ocular complications.

At this time both parents should be evaluated and appropriately treated for any evidence of gonorrheal or other sexually transmitted diseases. All cases of GC should be reported to the Center for Disease Control.⁴ Even without clinically apparent disease, neonates born to mothers with known gonococcal infections should receive a single IV or IM injection of 50,000 units of aqueous crystalline penicillin G (20,000 units for low birth weight infants).^{1,4,44,46-48,65}

Chlamydial Infection (Inclusion "Blennorrhea")

This is the most common type of infectious ophthalmia neonatorum seen in the United States. It has an incidence of three to eight per 1000 live births and accounts for 10-46% of all cases of neonatal conjunctivitis.^{1,4,8,12,13,22,24-27} The responsible organism is chlamydia trachomatis (serotypes D,E,F,G,H,I,J,K), which is an obligate intracellular bacteria-like organism that infects the epithelium of mucous membranes.

Clinical Presentation

Chlamydial conjunctivitis of the neonate usually begins four to 12 days after birth.^{8,12,26} There have been reports of conjunctivitis occurring as early as one to three days post-partum and as late as five to six weeks.^{22,24-27} The conjunctivitis has variable manifestations, ranging from mild hyperemia to severe purulence with membrane or pseudomembrane formation (Figures 7a and 7b). Lid inflammation correlates with the intensity of the surface response. Since there is no lymphoid tissue in the neonate, conjunctival follicle formation (characteristic of adult chlamydial infection) is absent. There are occasionally bloody tears. Unlike GC, there is rare corneal involvement, manifested by a superior micropannus (superficial fibroplasia and neovascularization). Some reports cite a high incidence of unilateral involvement (64-69%) while others show the majority of patients have bilateral disease.^{2,20-27}

Also unlike GC, this infection is self limited if left untreated. Low grade inflammation can last from two to 12 months with an average of 4.5 months.^{27,49} After six weeks of age the clinical appearance changes, due to the presence of conjunctival follicles more typical of adult chlamydial infection. Chronic untreated infection may result in both structural changes to the ocular surface and lids, which can affect vision, and provide a reservoir of contagion.

Congenital or neonatal chlamydial infection is associated with pneumonia or gas-

troenteritis in as many as 10-20% of neonates.^{9,50,51} Although the conjunctiva has been postulated to be the source for these infections, it has not been proven.^{9,12,50,51} The pneumonia gradually develops in the first three weeks of life and is characterized by nasal obstruction and discharge, tachypnea, and a staccato cough.

Laboratory Diagnosis

A positive history from the parents of urethral discharge or sexually transmitted disease is often found. The predominant inflammatory cell is the PMN. Giemsa stained conjunctival scrapings contain characteristic intracellular inclusions (large, purple, intracytoplasmic, paranuclear bodies). They are more common in neonates with conjunctivitis than the adult counterpart. Chlamydia may also be grown in specific tissue culture but this is expensive, time consuming, less available and less accurate than cytologic diagnosis. Fluorescein conjugated monoclonal antibodies of McCoy cell cultures is considered the test of choice by some investigators.^{53,55,57} Immunofluorescent antibody staining of conjunctival scrapings is a recent advancement in immediate diagnosis, which is 100% sensitive and 94% specific.⁵⁵

Treatment

Up to 75% of neonates treated with topical therapy alone will have disease recurrence.^{1,22-27} Systemic therapy is currently recommended for all neonates with chlamydial disease as it will also treat non-ocular sites of involvement.^{1,49-52,65} Erythromycin 12.5 mg/kg four times a day orally or intravenously for 14 days, is currently recommended as first line treatment.^{12,46-48,53} Resolution of disease occurs in 93% of patients who comply with full treatment.^{48,52,53} Intolerance to this regimen has led to recurrence rates of 19% to 40%.^{14,19,52,53} Patients intolerant or resistant to this therapy do well with trimethoprim/sulfamethoxazole 0.5 ml/kg/day orally in two divided doses a day for 14 days, and topical 1% tetracycline or 0.5% erythromycin ophthalmic ointments QID for 14 days.^{46,48,49} Patients should also have topical

ocular irrigation of exudate as mentioned previously regarding treatment for GC, and also be isolated if hospitalized.

Other Bacterial Conjunctivitis

The most common other organisms reported as "causing" ophthalmia neonatorum are staphylococci, coliform bacilli, pneumococci, streptococci, hemophilus, and

Figure 7a and 7b: Neonate with chlamydial ophthalmia neonatorum showing lid edema, conjunctival hyperemia, and chemosis (7a). Conjunctival pseudomembrane formation (7b, closed arrow) and absent corneal involvement (7b, open arrow) are typical clinical findings.

Pseudomonas aeruginosa.^{1,7,8,13,14,26} Many of these organisms are cultured from neonates without conjunctivitis and considered to be "normal flora." Because of this, it is unclear what organisms are responsible for ophthalmia neonatorum and what factors in the neonate predispose to these infections. Although ophthalmia neonatorum was attributed to *S. aureus* in 10% of cases from one series, another reported only two cases of conjunctivitis in 57 neonates with positive *S. aureus* cultures.^{1,7,8,14} A recent report found that 78.4% of positive cultures from normal newborns contain nonaerobic bacteria.³⁸ As mentioned previously, these authors also postulate an etiologic role of anaerobic organisms in the 20-60% of "culture negative" ophthalmia neonatorum cases.

Clinical Presentation

These bacterial infections present most commonly in the second to fourth week with lid edema, erythema, conjunctival hyperemia, mild chemosis, and a mucopurulent exudate (Figure 8). This is especially severe when due to coliform bacilli, pneumococci, hemophilus, and pseudomonas. Conjunctivitis due to most other bacteria usually follows a self limited, less severe course. However, *pseudomonas aeruginosa* can cause a severe sight threatening infection due to its ability, like GC, to penetrate an intact corneal epithelium; and streptococci can result in membranous conjunctivitis. This type of conjunctivitis can destroy ocular surface tissues with resultant lid and tear dysfunction or corneal opacification.

Laboratory Diagnosis

Conjunctival scrapings show a predominance of PMNs. Geimsa stain reveals no inclusion bodies and gram stains display abundant bacteria with typical staining and morphology. Aerobic and anaerobic cultures confirm the predominant, usually causal organism.

Treatment

If there is no corneal involvement, topical irrigation and broad spectrum antibiotics (e.g., trimethoprim/polymyxin drops, 0.5% erythromycin ointment, polysporin ointment, neosporin ointment) QID for 14 days are all that is needed.

Viral

Herpes simplex virus (HSV) is the most common viral cause of ophthalmia neonatorum.³⁰⁻³² In King County, Washington, the incidence of neonatal HSV infection was 28.2 per 100,000 births in 1982.⁵⁸ This form of ophthalmia neonatorum is usually associated with systemic infection and a 70-80% incidence of mortality or severe brain damage.³⁰⁻³⁷ Ocular disorders occur in 16-23%

Figure 8: Neonate with typical appearance of ophthalmia neonatorum due to bacteria other than GC or chlamydia. There is palpebral (closed arrow), greater than bulbar (open arrow), conjunctival hyperemia and stringy exudate.

Figure 9: Neonate with typical vesicular dermatitis associated with herpes simplex virus ophthalmia neonatorum.

of neonates with HSV infection.³⁰⁻³⁷ There have been only a few reports of other responsible viral agents. Coxsackie A9 was isolated in a patient with chlamydial infection, and adenovirus type 8 in a two week old with keratoconjunctivitis similar to adult epidemic keratoconjunctivitis.⁵⁹

Clinical Presentation HSV Infection

In 90% of involved neonates disease will present within two weeks, with a mean onset of seven days.³⁰⁻³⁷ Infection is first apparent by localized skin, mouth, or ocular surface (lid, conjunctival, and/or corneal) lesions (Figure 9). Seventy percent of neonates with localized skin or ocular infection will develop systemic disease within three weeks.³⁰⁻³⁷

Conjunctivitis, characterized by hyperemia and serosanguinous discharge, may be the initial or only manifestation. If no skin vesicles are present the diagnosis may be difficult. Keratitis can occur at any time during the illness. Fluorescein staining of the cornea reveals involvement varying from typical dendritic epithelial infection to geographic ulcers, and stromal abscess or necrosis. Intraocular infection can also occur at any time during the illness and commonly presents as either panuveitis or necrotizing retinitis.

Diagnosis

Because the most common causes of viral ophthalmia neonatorum are the HSVs 1 and

Table 1

Etiology	Onset	Smear	Culture	Features	Treatment
Silver Nitrate	24 Hours	- Organisms + Polys	No Growth	Mild	None
GC [^]	2-7 Days	Gram Stain Intracellular Diploci	Typical penetration may be necessary	Hyperacute Inflammation Marked chemosis Excessive exudation Penetrates intact epithelium Possible meningitis	Aggressive topical Systemic antibiotics *1
Chlamydial	24 Hours to 4 Weeks	+ Polys Intracellular Inclusions (Giemsa) + IFA	- Routine Bacterial	Mucopurulent discharge +/- Pneumonitis	*2
Bacterial (Non-GC)	Anytime	Free or Intracellular + + Polys	Specific Media	Variable Mild to severe endophthalmitis Corneal ulcer Sepsis	Topical & Systemic Specific Rx
Herpes Type I and II	Anytime	Multinucleated Giant Cells	- Routine Bacterial	+/- Dendritic corneal ulcer Mucopurulent discharge Vesicular dermatitis +/- Encephalitis	*3

[^] = Gonococcal Conjunctivitis

*1 = Aqueous penicillin G 100,000 units/kg/day IV QID for seven days, or Ceftriaxone 28-50mg/kg/day IV q 8-12 hours, acular irrigation followed by topical 0.5% erythromycin or 1.0% tetracycline ophthalmic ointments QID for 14 days.

*2 = Oral erythromycin syrup (12.5 mg/kg/day) in four doses for 14 days. Topical 0.5% erythromycin or 1.0% tetracycline ophthalmic ointment QID both eyes for 14 days. Recurrence or intolerance treated with trimethoprim/sulfamethoxazole 0.5ml/kg/day in two divided doses for 14 days and topical ointments.

*3 = Topical anti-herpetic therapy trifluorothymidine (Viroptic solution) nine times a day for at least 14 days or idoxuridine (Stoxyl ointment) five times a day for 14 days, +/- systemic acyclovir (Intravenous solution).

2, diagnosis is largely clinical. Laboratory diagnosis is useful for differentiating HSV 1 from HSV 2 and other viruses. Because as many as 70% of mothers are asymptomatic and only 65% of any parent will give a history of a genital lesion, a high index of suspicion is indicated.^{17,32-34,39} As mentioned previously, typical vesicular dermatitis, keratitis, retinitis, or encephalitis are major diagnostic signs. Conjunctival cytology shows multinucleated giant cells. Tissue and cell culture techniques are helpful for identification but are time consuming and expensive.³²⁻³⁴ Immunocytochemical diagnosis is reliable and available in some centers and may prove to be the most useful.³⁵⁻³⁷

Treatment

Topical and systemic anti-herpetic therapy is administered for all cases of ophthalmia neonatorum due to HSV infection. Treatment of ocular surface disease includes trifluorothymidine drops (Viroptic nine times/day), or idoxuridine ointment (Stoxyl five times/day) which are applied to both eyes for a minimum of 14 days. Systemic intravenous acyclovir (Zovirax) or vidarabine have shown to be beneficial for intraocular (uveitis, retinitis) and other systemic (encephalitis) involvement.

Prophylaxis

Until recently, neonatal ocular prophylaxis was universally accepted and, in fact, is presently mandated by law in many states in the US.^{4,15,46,47} Controversies in uniform prophylaxis using silver nitrate solution are due to recent reports on disease etiology, incidence, prophylaxis compliance, and efficacy.^{2,10,16,60-64} The United Kingdom stopped requiring prophylaxis of any form more than 25 years ago and Sweden stopped more than eight years ago.⁶⁰⁻⁶³ The issues making universal prophylaxis policies difficult include prevention of blindness, prevalence of infectious diseases, differences in intensity and frequency of prenatal care, cost-effectiveness, social customs, geography, and parental bonding. Bell et al recently reported a 22% incidence of nongonococcal conjunctivitis in unprophylaxed neonates who were the offspring of women without cervical gonorrhea infection and under continual obstetric care.⁵⁶ This conjunctivitis did not require treatment. The incidence of conjunctivitis in the same population decreased to 14% using silver nitrate prophylaxis and 16% using erythromycin prophylaxis. These results suggested a well defined population in which prophylaxis may not be necessary. Unfortun-

nately, this is not a common situation in many obstetric practices.

In recent years, chlamydia trachomatis has been recognized as the most common cause of ophthalmia neonatorum.^{1,4,8,12,13,24-27} There are conflicting reports on the efficacy of silver nitrate's ability to prevent chlamydial conjunctivitis.^{5,16,48,61-63} Laga et al have shown silver nitrate to reduce the incidence of chlamydial conjunctivitis by 68% compared to 77% for tetracycline ointment.⁶⁴ Effect of this prophylaxis on non-ocular involvement was not mentioned. Although Hammerschlag et al found a decreased incidence of conjunctivitis in offspring of mothers with chlamydial infections using tetracycline (11%) or erythromycin ointment (14%) prophylaxis, this was not significantly different than silver nitrate (20%).⁶¹ Data from a study performed in Nairobi indicated that either 1% silver nitrate or 1% tetracycline markedly, but not completely, reduced the number of infections with either GC or chlamydia trachomatis when given in conjunction with cleansing of the lids immediately after birth.¹⁶

As a result of recent reports showing efficacy of other topical therapy, a changing pattern (chlamydia predominance) of disease, and a continued need to prevent the blinding effect of gonococcal ophthalmia, we support the recommendations of the American Association of Pediatrics and Center for Disease Control regimen for neonatal ocular prophylaxis.^{4,15,65} The strongest reason to recommend universal neonatal prophylaxis is that GC ophthalmia neonatorum remains a potentially blinding disease. Discontinuing prophylaxis as a universal policy is not advisable unless GC exposure can be clearly determined and its presence detected with absolute certainty. All current available data suggest that properly administered silver nitrate drops (1% solution), 0.5% erythromycin or 1% tetracycline ointments are effective prophylaxis against GC ophthalmia neonatorum. The cost, availability, legal requirements, and practice of application may be factors in choosing the specific prophylactic treatment. Given that these methods of prophylaxis are all less effective against chlamydia and not effective against herpetic disease, the best method of control may be screening of pregnant women (prenatal and perinatal obstetric care). Neonatal ocular prophylaxis is using a 1% silver nitrate solution or an

ointment containing 1% tetracycline or 0.5% erythromycin instilled without subsequent irrigation in both eyes of all infants following birth remains the standard of care. Hygiene of the lids after birth has been a traditional part of prophylaxis and allows access of the medication to the ocular surface. Immediate cleansing of the face and eyelids at birth with removal of blood and secretions may also minimize infections by preventing infected secretions from contacting the ocular surface. Prophylaxis may be delayed by no more than one hour to facilitate maternal-infant bonding. Infants delivered by cesarean section should also receive prophylaxis because of the possibility of ascending infection even without rupture of membranes.

Prophylaxis is not a substitute for prenatal identification of sexually transmitted disease. If undiagnosed, prophylaxis will not prevent infection from postnatal contact. Prenatal screening has been helpful in reducing the incidence of ophthalmia neonatorum, but since it is not 100% reliable, it further enhances rationale for prophylaxis. When an infant is born to a mother with known untreated disease, prophylaxis alone is inadequate. Treatment regimens proposed for the neonate in this situation vary and range from a single systemic dose for the suspected organism to a full course of antibiotics. It is clear that more than prophylaxis is needed in these patients.

It is not clear that ocular prophylaxis influences the systemic sequelae of chlamydial infections, and, in fact, may prolong the diagnosis due to the absence of warning that results from ocular involvement. Since the recommended prophylaxis does not completely prevent ophthalmia neonatorum or influence the less common causes, all patients with ophthalmia neonatorum should have complete examinations and laboratory evaluations. If the clinical picture is unclear and laboratory tests are not immediately available, treatment for presumed GC ophthalmia neonatorum should begin.

The impact of 100 years of prophylaxis in preventing and decreasing the prevalence of blinding disease from ophthalmia neonatorum in neonates must not lead to complacency. Until predisposing perinatal conditions are eliminated, this remains a potentially significant medical problem. Changing patterns of disease, diagnostic and treatment methods as well as their efficacy, all require continued study. □

Sudden Onset of Diplopia

Diplopia or double vision is a distressing, disabling, and sometimes disorienting condition. Diplopia may arise from isolated benign oculomotor disturbances or it may herald a more serious underlying systemic disorder. The purpose of this article is to review common causes for acute-onset diplopia, to review the diagnostic evaluation of diplopia, and to briefly summarize management of patients with diplopia.

Single binocular vision requires fine coordination of the action of the six extraocular muscles of each eye. These muscles not only must function with the same rate of contraction, they must also pull with the same degree of strength. Any alteration of the innervation to, or in the contractile forces of, these muscles may cause diplopia.

The ability to maintain alignment of the visual axes of the eyes when viewing at distance or near requires a fine balance and coordination of the muscle forces. In addition, this coordination must extend to fields of right, left, up and down gaze and also compensate for tilting of the head with appropriate cyclotorsional movements of the eyes. Activities such as swinging a golf club and following the ball after it has been struck require exquisite fine tuning of the movement of the eyes. Coordinated movement of both is regulated by afferent and efferent pathways of the central nervous system which include the optic nerves, optic radiations, visual cortex, associative areas of the cerebral cortex, brainstem, and cranial nerves III, IV, and VI. Additional input into reflex eye movements and eye position/orientation comes from the otoliths, the stretch receptors in the neck, and the cerebellum.

Causes of Diplopia

The most common cause of diplopia is an acute disruption of the innervation to one or more of the extraocular muscles. This may be caused by either a III, IV, or VI cranial nerve palsy or combination thereof. In most large series, the most common cranial nerve palsy causing diplopia is a VI nerve palsy followed by III and IV nerve palsy.¹⁻³ How-

ever, incidence rates may vary, depending on whether the series is collected from a general population or from a population with a referral bias.

Sixth Cranial Nerve Palsy

An acute VI nerve palsy causes a loss of lateral (i.e., toward the temple) eye movement. The most common causes of acquired VI nerve palsy in adults include trauma, microvascular ischemia (such as in diabetes), aneurysm, and neoplasm (Table 1). Miscellaneous causes include increased intracranial pressure, multiple sclerosis, migraine, and inflammatory disorders; in a significant percentage of cases, no cause is found.

In children, the leading causes of VI nerve palsy include trauma, neoplasm, and a large percentage of miscellaneous causes including hydrocephalus and post-viral idiopathic palsy.³ Because of the latter condition, also known as benign sixth nerve palsy of childhood, otherwise healthy children with acute sixth nerve palsy may be observed and the palsy will resolve over six to eight weeks (Figure 1). If the palsy becomes worse or additional neurologic findings develop during this period, neuroradiologic evaluation is indicated to rule out intracranial disease such as brainstem glioma.

Third Cranial Nerve Palsy

Some common causes of acute III cranial nerve palsy are listed in Table 2. Oculomotor or III nerve palsy presents with the eye deviated out and down, and poor rotations in all fields except abduction. Ptosis and pupil dilation also usually are present but the pupil may be "spared" if the paralysis is incomplete.⁴ This is of diagnostic significance in adults because pupil sparing oculomotor palsy is commonly caused by microvascular ischemia, (e.g., diabetes), whereas pupil in-

Table 1

Common Causes of Acute VI Cranial Nerve Palsy	
Adults	Children
Diabetes (microvascular)	Inflammatory (postviral illness)
Aneurysm (vascular)	Trauma
Hydrocephalus	Hydrocephalus
Tumor	Tumor - Pontine glioma
Trauma	
Inflammatory - infectious	
Demyelinating disease	

Figure 1: A four-year-old child developed a face turn four days following a viral illness. The left eye abducted poorly and the patient had resolution of her diplopia and face turn over the ensuing eight weeks.

Figure 2: This woman had a third cranial nerve palsy as a manifestation of metastatic carcinoma. The eyelid covers the eye. When the lid is elevated, the eye is directed downward and outward and cannot adduct.

involvement suggests the likelihood of an aneurysm of the posterior communicating and internal carotid arteries, compromising the nerve externally. Other more obvious causes for III cranial nerve palsy are trauma and as a late sign of an intracranial tumor (Figure 2).

In children, acute III cranial nerve palsies are rare and occur most often in the setting of head trauma.³ Tumors, infections, and inflammatory conditions usually will have obvious signs and symptoms which suggest the correct diagnosis. Rarely, some patients will have ophthalmoplegic migraines causing diplopia due to transient III cranial nerve palsy.

Fourth Cranial Nerve Palsy

Acute IV nerve palsy is characterized by weakness of the superior oblique muscle. This causes double vision described as vertical with often one image being tilted, the latter a result of the weakened torsional function of the superior oblique muscle.

The most common cause of acute IV cranial nerve palsy in adults is closed head trauma. Another common cause includes decompensated congenital IV nerve palsy (Figure 3). This occurs when a patient with a long-standing mild IV nerve paresis loses the ability to control the underlying weak-

Figure 3: This patient has a right IV nerve palsy. The head is tilted to the opposite side. Note the elevation of the right eye in adduction. The elevation is due to the unopposed action of the inferior oblique muscle.

ness due to age or illness. This may be particularly troublesome in the reading position, since the superior oblique is an important depressor of the eye. Microvascular ischemic mononeuropathy is another cause, particularly in older adults.

Children also will develop IV cranial nerve palsy following head trauma.³ A posterior fossa tumor rarely may cause a IV cranial nerve palsy but it usually will present as a late sign. Children with a congenital IV nerve palsy often will not complain of diplopia, but will tilt the head in order to compensate for the muscle weakness.

Other Causes for Sudden Onset Diplopia

There are causes of diplopia that are unrelated to cranial nerve palsy. Diplopia may also arise due to disease intrinsic to the extraocular muscles (Table 4). Thyroid ophthalmopathy (Grave's disease) causes inflammation and enlargement of the extraocular muscles with restriction in eye movement leading to diplopia. Orbital myositis can mimic this condition (Figure 4). Myasthenia gravis, a disease of the neuromuscular junction, may present as vari-

Table 2

Common Causes of Acute III Cranial Nerve Palsy

Trauma	Head trauma
Decompensated congenital IV cranial nerve palsy	Posterior fossa tumor (rare and usually not the presenting sign)
Vascular disease	Encephalitis

Table 4

Other Conditions to Consider With Acute Onset of Diplopia

Myasthenia Gravis
Pseudotumor and orbital myositis
Thyroid eye disease
Decompensated strabismus
Tetanus
Botulism

Figure 5: Coronal cuts of the right orbit show a blow out fracture as the cause for diplopia in up gaze.

able diplopia that worsens during the day. Diplopia in up gaze can be caused by entrapment of the inferior rectus following orbital trauma (Figure 5).

Evaluation

The history of onset of diplopia related to a cranial nerve palsy characterizes: the degree of palsy; whether it was complete or partial; and the onset, whether sudden or occurring over days or weeks to develop. The duration of the palsy may be transient and accompanied by a classic migraine headache, or the headache may be dull and accompanied by a change in personality or lethargy which may suggest hydrocephalus. Children should have questions directed to ascertain the presence of an antecedent viral illness.

The visual acuity should be measured, with any needed optical correction in place, to detect amblyopia or to document any other process that may cause a decrease in visual acuity. Some patients with old comitant strabismus may have residual amblyopia. This would suggest that the patient has had previous strabismus and now is unable to control the deviation, resulting in diplopia.

Patients should have a careful examination of their ocular motility. Versions or movement of both eyes together should be demonstrated in the nine positions of gaze, that is, up, down, right, left, up and right, down and right, etc. The eyes should be moved quickly into each of these positions and the saccadic velocity or rate of movement of the eyes should be noted. If a manifest strabismus is present, the magnitude should be

Figure 4: This 12-year-old child developed an acute VI nerve palsy with proptosis and chemosis. Biopsy showed orbital myositis. Two months after treatment with oral prednisone, the proptosis and chemosis and diplopia resolved.

quantitated using an alternate prism and cover test. When this is done sequentially, these measurements will give the examiner information on whether the cranial nerve palsy is in a recovery phase or if the palsy is progressive. This is particularly important in children who have had viral illnesses and VI cranial nerve palsy. It is not practical to perform neuroimaging on all children who present with a mild VI nerve palsy. Those that are progressive, however, should be evaluated for a pontine glioma. Measurement also will provide information regarding stabilization of the strabismus. Acquired nystagmus in the presence of acute cranial nerve palsy usually indicates posterior fossa disease.

A dilated fundus exam should be performed to examine the optic nerve for signs of papilledema. Additional information can be gained by looking for torsional rotation of the globe. Excyclorotation of the fundus may suggest involvement of the IV cranial nerve which innervates the superior oblique muscle, a cyclovertical muscle.

The need for additional studies or tests will be determined by the degree of suspicion for a specific condition. Diabetes can be excluded by blood sugar determinations. Symptoms that suggest tumor or hydrocephalus may be further investigated with magnetic resonance imaging or CT scanning. The focus of the scan should be directed at the brainstem area. Coronal cuts through the orbit may be requested to investigate restrictive strabismus related to trauma or muscle hypertrophy and infiltration related to thyroid eye disease.

If myasthenia gravis is suspected, a Tensilon[®] test may be performed. The end point of the test is resolution of diplopia following the administration of Tensilon[®]. This test may be considered for patients who have decreased saccadic velocity of the eye movements, variable vertical double vision and ptosis. Tensilon[®] will temporarily correct neuromotor deficits related to myasthenia gravis, confirming the diagnosis.

Acute phases of thyroid eye disease may also cause acute gaze related diplopia due to restriction of movement of the globe. This usually occurs in up gaze but restriction of the medial rectus may cause diplopia in lateral gaze also. Patients with thyroid eye disease usually will have chemosis of the conjunctiva, dilated blood vessels overlying the extraocular muscles, and proptosis.

Management

The management of the diplopia will include covering the good eye for periods of time to improve movement of the affected paretic eye. This also will serve to prevent contracture of the unopposed antagonist of

the paretic muscle. This is especially true in patients with profound sixth cranial nerve palsy. Following resolution of the palsy, esotropia will persist due to the contracted inelastic medial rectus muscle. When occlusion is performed, caution should be given regarding driving and performing other tasks that require binocular function. In children less than seven years of age, visual acuity should be carefully monitored since excessive occlusion can cause amblyopia.

The patient may be instructed to tilt the head or posture the head away from the muscle affected by the cranial nerve palsy and thus reduce the diplopia. For example, patients with a right superior oblique palsy will frequently tilt their head to their left shoulder. Patients with a VI cranial nerve palsy will frequently posture their face to the side of the palsy so as to achieve single vision.

Glasses may be prescribed to sharpen the images falling on the retina. This will enhance the fusion reflex which will attempt to correct the ocular misalignment. Prism glasses are usually not helpful for acute cranial nerve palsy. On the other hand, if the palsy becomes chronic, they may be a satisfactory solution.

Patients with acute VI cranial nerve palsy that do not require observation to exclude serious conditions may elect to have the medial rectus muscle injected with botulinum A toxin (Botox[®]) to balance the paretic lateral

Figure 6:

Top: Botulinum A toxin may be used to treat acute VI nerve palsy.

Center: A 45-year-old man with a nasopharyngeal carcinoma developed on acute VI nerve palsy.

Bottom: Two weeks following treatment with botulinum A toxin, the right eye is well aligned. It still cannot abduct or adduct, but the patient is relieved of diplopia in primary gaze.

rectus muscle.⁵ The duration of the toxin effect is about three months, a time interval similar to the time it takes for a VI cranial nerve palsy to resolve (Figure 6).

Most cranial nerve palsies will show improvement between one and three months following onset. Usually 95% of the improvement will be seen and the amount of residual strabismus will become stable at six months. Strabismus surgery may be indicated for patients who have stable deviations that are associated with persistent diplopia. The principles in strabismus surgery are to balance the muscle forces on the globe by performing graded weakening procedures of the opposing rectus or oblique muscles.

Summary

Patients will recognize diplopia without prompting and will present themselves to physicians with disabling symptoms. Evaluation should be focused based on the history and the examination. Tests requested should be directed toward discovery of the most likely cause for the diplopia. Recovery is common following cranial nerve palsy. Diplopia due to myopathic etiologies usually does not resolve but tends to stabilize with time. Patients who become stable after six months and who have persistent diplopia can be effectively treated with strabismus surgery. □

Sudden Unilateral Visual Loss

Excluding trauma, most entities that cause acute, unilateral visual loss occur in the posterior segment (the structures behind the lens—vitreous cavity, retina, choroid, optic nerve). The fundus is that part of the posterior segment visible with ophthalmoscopy (retina, choroid and optic nerve).

Careful attention should be given to the history when a patient presents with a complaint of sudden visual loss in one eye. In some instances, the visual loss has been gradual, and is noticed when the patient fortuitously covers the eye with better vision. For this reason, a specific history should be taken. The question should be asked, "How did you notice the visual loss?" If the patient states that he or she just happened to cover one eye and noticed blurred vision in the other, it may imply a less acute process than the case in which a patient states he or she was watching the television and noted that one eye suddenly went blank without covering the other.

Additionally, the physician should assess whether the vision in one eye or the visual field was affected. For example, patients with a left homonymous hemianopsia may state that the vision in the left eye suddenly became cloudy, whereas in fact it was the left visual field in both eyes that was affected. In this instance, the clinician should suspect a central nervous system abnormality, rather than a local ocular problem.

The *rapidity* of the visual loss is important, and should be specifically addressed. For example, vascular obstructive phenomena of the retina or optic nerve, as well as vitreous hemorrhage, can occur over seconds to minutes, whereas retinal detachment usually develops over hours to days, but occasionally weeks to months.

With the exceptions of trauma and optic neuritis, most causes of sudden, unilateral visual loss are *painless*. This is not surprising, since the retina, which has no pain fibers, is the structure most often involved.

An *afferent pupillary defect* (Marcus Gunn pupil) is usually seen if the optic nerve is involved, even if the visual acuity is only minimally impaired. It can also occur sec-

ondary to retinal damage, such as with vascular obstructive events or retinal detachment, but in this instance the afferent defect is usually associated with marked visual loss. In essence, an afferent pupillary defect is a more sensitive indicator of optic nerve damage than retinal damage. It may or may not be present with vitreous hemorrhage, and is usually absent in eyes with macular degeneration.

The purpose of this chapter is to help the clinician differentiate between the *more common* causes of sudden, nontraumatic, unilateral visual loss. An overview, particularly considering the temporal aspects of the differential diagnosis, is presented in Table 1.

Acute Visual Loss

For the purpose of this article, acute visual loss will be defined as that occurring over a period of seconds to hours or longer. The clinician should be aware that the time ranges are somewhat arbitrary, and occasionally can fall outside the values listed herein.

Retinal Artery Obstruction Diagnosis¹

Retinal artery obstruction typically causes acute, unilateral loss of vision occurring over a period of seconds. An afferent pupillary defect is most often present. With central retinal artery obstruction, the whole field of vision is usually affected, whereas with branch retinal artery obstruction only that area of field corresponding to the blocked vessel is compromised.

The visual acuity with acute central retinal artery obstruction usually drops to the counting fingers to hand motions level. Fundus examination (Figure 1) reveals whiten-

Figure 1: Central retinal artery obstruction. The superficial retina demonstrates ischemic whitening, and a cherry-red spot is visible in the foveola.

Table 1

Causes of Sudden, Unilateral Visual Loss		
<i>Acute</i>		
Cause	Rapidity of onset	Comments
Retinal artery obstruction	Seconds	Retinal whitening Cherry red spot + Marcus Gunn
Vitreous hemorrhage	Seconds to minutes	No fundus view - Marcus Gunn (unless severe) Most commonly from diabetic retinopathy
Ischemic optic neuropathy	Minutes to days	Swollen optic nerve + Marcus Gunn (consider diagnosis of optic neuritis in patient under age 50)
<i>Subacute</i>		
Cause	Rapidity of onset	Comments
Retinal vein obstruction	Hours to days	Retinal hemorrhages, swollen optic disc, dilated retinal veins
Retinal detachment	Hours to days	Often preceded by flashes and floaters May present as "curtain coming across the vision"
Wet macular degeneration	Days to months	Metamorphopsia may be a presenting symptom

ing of the superficial retina in the macular area, with a cherry-red spot in the foveola. The retina in the foveola is only 0.1mm in thickness, whereas the perfoveolar retina is approximately 0.5mm in thickness. Thus, the ischemic whitening is most pronounced and visible in the thicker perfoveolar retina. In the foveola, the underlying retinal pigment epithelium and choroid give the color to the cherry-red spot.

Approximately 20% of eyes with acute central retinal artery obstruction have ophthalmoscopically visible intra-arterial emboli. These can be cholesterol (Hollenhorst plaques), which are usually small, glistening yellow, and arise from the carotids, or calcific (Figure 2), which are larger, whiter, and most commonly arise from the cardiac valves.

The pathophysiologic causes of retinal arterial obstruction are similar to those within other arterial vessels in the body and include embolus, thrombosis, hemorrhage under an atherosclerotic plaque, inflammation, dissection and hypertensive necrosis.

With branch retinal artery obstruction, there is ischemic retinal whitening in the distribution of the obstructed vessel (Figure 3).

Figure 2: Large calcific plaque on the optic disc.

Figure 3: Branch retinal artery obstruction demonstrates ischemic retinal whitening in the distribution of the obstructed vessel. An obstructing embolus, most likely the cholesterol variant, is present within the inferotemporal branch artery.

The visual acuity is variable, and may be normal if the foveola is spared.

Management

Unfortunately, no therapy is consistently effective for the restoration of visual loss in eyes with acute central retinal artery obstruction. Breathing into a bag to raise the pCO₂ and cause vasodilatation has been advocated, as have digital ocular massage and anterior chamber paracentesis in association with breathing of carbogen (95% oxygen and 5% carbon dioxide). Other therapies have included the administration of sublingual nitroglycerin (1/150gr) and systemic administration of urokinase. After 24 hours, treatment is generally not administered.

If giant cell arteritis is suspected as the cause, aggressive, high dose, systemic corticosteroid therapy should be given on an urgent basis, since the second eye can become involved within hours after the first. Corticosteroid therapy reduces the chance of involvement of the second eye, although rarely this type of treatment can improve the vision in the first eye.

The visual prognosis is generally grim after acute central retinal artery obstruction, and most eyes remain legally blind (with vision < 20/200).

Ocular therapy is usually not given for branch retinal artery obstruction because the visual prognosis for central acuity is so much better than with central retinal artery obstruction.

A systemic workup should be considered to ascertain underlying etiologic factors. They are similar for central and branch retinal artery obstructions. Associated systemic abnormalities include systemic arterial hypertension, diabetes mellitus, cardiovascular disease, and peripheral vascular disease. Giant cell arteritis accounts for approximately 1-2% of central retinal artery obstructions in the older population. In the population under age 30, associated systemic abnormalities include migraine, collagen vascular disease, cardiac valvular disease, and coagulopathies.

A list of systemic abnormalities that have been associated with retinal arterial obstruction is shown in Table 2.

Vitreous Hemorrhage Diagnosis²

Patients with the onset of vitreous hemorrhage generally relate a history of seeing large black floaters in one eye. If the bleeding is severe, they may experience marked loss of vision to the counting fingers or worse range. Ophthalmoscopy may be difficult or impossible because of the blood in the vitreous cavity (Figure 4).

The most common causes of nontraumatic vitreous hemorrhage are:

1. Diabetic retinopathy (from neovascularization)
2. Branch retinal vein obstruction (from neovascularization)
3. Sickle cell retinopathy (from neovascularization)
4. Posterior vitreous detachment
5. Posterior vitreous detachment with a retinal tear

In patients with diabetic retinopathy, branch retinal vein obstruction, and sickle cell retinopathy, retinal capillary nonperfusion can develop and stimulate the growth of new blood vessels on the surface of the retina and/or optic disc. These new vessels are fragile and attach to the vitreous gel. The vessels cause contracture of the overlying vitreous gel, thus leading to bleeding into the vitreous cavity.

Figure 4: Preretinal blood in the eye of a patient with diabetic retinopathy.

The vitreous gel normally shrinks with age, so that in approximately 30% of people by age 50 it pulls away from the posterior retina. This anomaly is called a posterior vitreous detachment. In some instances, the gel tears a retinal vessel, with or without tearing of the full-thickness retina itself. Although vitreous traction on the retina is painless, it can cause momentary light flashes (photopsias).

Management

Vitreous hemorrhage will often clear if given time. In patients with diabetic retinopathy, branch retinal vein obstruction and sickle cell retinopathy, laser panretinal photocoagulation can be given as the blood clears to cause regression of the neovascularization and prevent further bleeding. If the bleeding is severe, a pars plana vitrectomy may be required to restore vision.

Particularly in nondiabetic patients, the onset of a vitreous hemorrhage should alert the clinician that a retinal tear could be present. Prompt referral to an ophthalmologist should be considered, since laser therapy or cryotherapy of a retinal tear can prevent progression to a retinal detachment.

Ischemic Optic Neuropathy

Diagnosis

Ischemic optic neuropathy, also called anterior ischemic optic neuropathy, can occur in two forms: nonarteritic and arteritic.³ Both occur secondary to blockage of the small arterial vessels that supply the optic nerve head. The nonarteritic variant is likely related to atherosclerotic damage and anatomic anomalies in the nerve head, and accounts for about two-thirds of cases, while the arteritic variant occurs secondary to giant cell arteritis and comprises the remaining third.

The entity causes sudden visual loss occurring over minutes to hours, although the process can take days. An afferent pupillary defect is typically present, and the visual acuity can vary from slightly diminished to no light perception. The arteritic variant usually causes more pronounced visual loss than its nonarteritic counterpart. Ocular pain on movement is generally absent.

Fundus examination reveals a swollen optic disc (Figure 5), occasionally in association with peripapillary hemorrhages. The disc is often hyperemic with the nonarteritic variant, while with the arteritic variant it is more commonly pale due to the greater degree of ischemia.

The arteritic variant is seen in patients over the age of 55 years, but more often those 70

Table 3

Clinical Features of Anterior Ischemic Optic Neuropathy		
	Nonarteritic Variant	Arteritic Variant
Peak age	55-70 years	70-80 years
Involvement of second eye	40%	75%
Disc appearance	Hyperemic swelling	Pale swelling
Erythrocyte sedimentation rate (Westergren)	<40mm/hour	>50mm/hour
Polymyalgia rheumatica	Rare	Common

or older. It is often accompanied by the symptoms and signs of polymyalgia rheumatica (malaise, weight loss, joint pain, jaw claudication, scalp tenderness, etc.). An erythrocyte sedimentation rate should be obtained at the initial visit, since approximately 75% of patients will have involvement of the second eye unless systemic corticosteroid therapy is instituted. If involvement of both eyes is seen at the same time, the diagnosis of giant cell arteritis is very likely. Approximately 40% of patients with the nonarteritic type will have involvement of the second eye.

The salient clinical features of the disease are shown in Table 3.

With the clinical picture of relatively sudden visual loss in association with a swollen optic disc and an afferent pupillary defect in a person under the age of 50, the diagnosis of optic neuritis should be considered. In some cases, it can be bilateral. Unlike ischemic optic neuropathy, pain on ocular movement is often present. Underlying causes include viral, syphilis, Lyme disease, demyelinating disease, toxoplasmosis, toxocariasis and others. In many instances, no underlying etiology can be found. The degree of visual impairment is variable, but in most patients the vision improves over a period of weeks.

Management

No medical therapy has been shown to be of consistent benefit for the treatment of nonarteritic, anterior ischemic optic neuropathy. Optic nerve sheath decompression has been suggested to be of help in the manage-

ment when gradual progression has been demonstrated; clinical trials are in progress to confirm pilot studies.

Unfortunately, systemic corticosteroid therapy is not usually of benefit for eyes with the arteritic variant of anterior ischemic optic neuropathy. Treatment of the underlying disease can reduce the chances of involvement in the second eye dramatically.

Figure 5: Hyperemic swelling of the optic disc in an eye with nonarteritic, anterior ischemic optic neuropathy.

Figure 6: Central retinal vein obstruction.

Figure 7: Branch retinal vein obstruction.

Systemic corticosteroids have not been shown to improve the long term visual prognosis in patients with optic neuritis. Nevertheless, the administration of high dose, intravenous methylprednisolone has been shown to reduce the incidence of development of multiple sclerosis over the following two-year period from 17% to 8%.⁴

Subacute Visual Loss

Subacute visual loss, in this article, is defined as loss of vision occurring over a period of hours to days.

Retinal Vein Obstruction

Diagnosis

The visual acuity in eyes with retinal vein obstruction most often decreases over a period of hours to days, although rarely it happens over minutes. Both central retinal vein obstruction and branch retinal vein obstruction can occur. Some patients with each are actually asymptomatic and have a visual acuity of 20/20, while in others the vision is reduced to counting fingers or worse.

Fundus examination in an eye with central retinal vein obstruction (Figure 6) discloses dilated and tortuous retinal veins in conjunction with retinal hemorrhages, and retinal edema.⁵ The optic disc may also be swollen. With branch retinal vein obstruction there is intraretinal blood and retinal edema along the distribution of the blocked vessel (Figure 7). Most branch retinal vein obstructions occur at arteriovenous crossings.

Management

No proven effective treatment exists for stabilizing or improving the vision in eyes with central retinal vein obstruction. Anticoagulation with aspirin has been recommended, and in severe cases anticoagulation with warfarin or streptokinase or tissue plasminogen activator has been attempted.

Laser therapy can help to prevent iris neovascularization and neovascular glaucoma in eyes with a markedly ischemic central retinal vein obstruction, but has not been shown to be of benefit for improving visual acuity.

In some eyes with branch retinal vein obstruction, laser treatment can give a better long term visual prognosis by reducing macular edema.⁶ Additionally, laser treatment can reduce the incidence of vitreous hemorrhage in eyes with branch retinal vein obstruction that have developed neovascularization of the optic disc and/or retina.⁷

Patients with central retinal vein obstruction should be considered for a systemic workup, including evaluation for systemic arterial hypertension, hyperlipidemia, diabetes mellitus and hyperviscosity syndromes. Those with branch retinal vein obstruction should be evaluated for systemic arterial hypertension.

Retinal Detachment

Diagnosis⁸

Patients with a retinal detachment usually experience the symptoms of floaters and flashes (photopsias) beginning days prior to the development of the detachment. The photopsias occur secondary to vitreoretinal traction, and the floaters secondary to contracting collagen fibrils of the shrinking vitreous gel, as well as vitreous hemorrhage. Some patients see the detachment as a curtain coming across the vision from the periphery toward the center. When the detach-

Figure 8: Retinal detachment extending from the temporal side into the macular region. Folds are present in the detached retina.

Figure 9a: "Wet" macular degeneration. Subretinal blood and subretinal fluid are present in the fovea due to leakage from the choroidal neovascular membrane.

ment reaches the central macula, the vision drops precipitously.

Retinal detachments can be rhegmatogenous (with a hole) or nonrhegmatogenous. With a rhegmatogenous retinal detachment, traction by the vitreous gel creates a tear in the retina and liquefied vitreous travels from the vitreous cavity into the subretinal space between the retina and the retinal pigment epithelium. Nonrhegmatogenous detachments (traction retinal detachments; those without a retinal hole) are most commonly seen in diabetic eyes in which neovascularization of the retina stimulates the overlying vitreous gel to shrink and pull the retina away from the underlying retinal pigment epithelium.

Ophthalmoscopy in the presence of a retinal detachment reveals an elevated retina with folds. The underlying choroidal vascular pattern is usually obscured.

Management

Any patient with the sudden onset of floaters and/or photopsias should be expediently referred for ophthalmologic evaluation. If the patient sees a curtain crossing the visual field, the referral should be on an emergency basis.

The visual prognosis is better if the retina can be repaired before the macula becomes detached. Repair is accomplished with scleral buckling and vitrectomy techniques, as well as intravitreal air and gas injections.

Age-Related Macular Degeneration⁹

The macula is essentially the area of the fundus located within the temporal vascular arcades. Macular degeneration, deterioration of the retina in this region, is the leading cause of legal blindness in the United States. There are two types, dry (atrophic) and wet (exudative).

Approximately 10% of the population will develop dry age-related macular degeneration, and 10% of patients with dry macular degeneration (1% of the total) will develop wet, or exudative, macular degeneration. Both most commonly occur in the sixties and beyond.

Figure 9b: Figure 9a at six months later. The choroidal neovascular membrane has enlarged and a cicatricial subretinal scar has formed.

With dry macular degeneration there is slow visual loss that occurs over months to years. Macular drusen and retinal pigment epithelial changes can be seen with ophthalmoscopy. Visual disturbances can vary from mild to severe.

In eyes with wet macular degeneration there is a growth of choroidal blood vessels (choroidal neovascular membrane) through

Bruch's membrane into the subretinal pigment epithelial and subretinal spaces. The blood vessels bleed, leak plasma, and eventually form a cicatricial scar associated with severe visual loss to 20/200 or worse. If one eye is affected by wet macular degeneration, the chance of the second becoming similarly involved within five years is approximately 40%.

A major early symptom of wet macular degeneration is metamorphopsia (distortion). This can be demonstrated when the patient looks with each eye individually at a dot in the center of an Amsler grid, a piece of graph paper. If the straight lines appear curved, metamorphopsia is present.

Management

The presence of metamorphopsia should alert the clinician that the early stages of wet macular degeneration may be present. Prompt referral to an ophthalmologist should be considered, since the new blood vessels can grow within days.

Laser photocoagulation is the mainstay of treatment for wet macular degeneration. No therapy has yet been proved effective for dry macular degeneration. □

Sudden Bilateral Visual Loss

Simultaneous, sudden bilateral loss of vision is an extremely rare event as the inciting lesion must affect both sides of the visual system. This should be distinguished from sequential visual loss.

Ophthalmologists often apply the analogy, "the eye is a camera" when discussing pathological conditions that affect the eye.

This is an appropriate comparison, as the eye has the cornea and lens in front which are equivalent to the optics of a camera. Similarly, the retina functions as film. However, an in-depth explanation of the visual system requires more sophisticated photographic technology. In this case the eye becomes a videocamera or camcorder, that is connected by a cord (the optic nerve) which interfaces with a VCR and TV (occipital cortex). Furthermore, in the human, vision functions in stereo with duplicative systems that share data at the chiasm where the cord or optic nerve is spliced.

Simultaneous, sudden bilateral loss of vision is an extremely rare event as the inciting lesion must affect both sides of the visual system. This should be distinguished from sequential visual loss. Some patients may be unaware of a previous loss of vision in one eye. This may be insidious, as a patient may adapt to the slowly progressive loss of vision from a cataract in one eye. If the non-cataractous fellow eye sustains a sudden loss of vision, the patient will perceive their loss of vision as being simultaneous and bilateral. In many such cases, two different events may be responsible for the blindness. This type of visual loss is discussed elsewhere in this publication. If the sequential visual loss is rapid, then the same etiology can usually be implicated and is considered in this discussion.

Retina

The retina is a wallpaper that lines the inside of the eyeball. Retinal detachment results as a mechanical separation from the eyewall, and once the macula is affected, there is profound loss of vision. These are bilateral in 10-20% of cases, but are rarely simultaneous.¹ Blunt and penetrating trauma may occur bilaterally, and result in simultaneous loss of vision. The retina is fu-

eled by its vasculature, and any interruption of its blood supply can cause a sudden loss of vision. Central retinal artery occlusion is the most common event, and yet a simultaneous, bilateral occurrence is distinctly uncommon. There are several non-infectious inflammatory conditions that can produce a unilateral or bilateral, sudden loss of vision. These include acute multifocal placoid pigment epitheliopathy (AMPPE)², serpiginous choroidopathy,³ and birdshot or vitiliginous choroidopathy.⁴ Acute retinal necrosis syndrome (ARN) is bilateral in 30% of cases and can cause a rapidly progressive loss of vision.⁵ Varicella zoster virus and herpes simplex virus are the etiologic agents in this disease. Cytomegalovirus retinochoroiditis is becoming increasingly common in our AIDS population, and can also result in a sudden, unilateral or bilateral loss of vision.⁶ Serous retinal detachments can occur in toxemia of pregnancy,⁷ metastatic tumors to the choroid (a vascular layer beneath the retina),⁸ and in Harada's Disease⁹ which is an inflammatory disease.

In almost all of these cases, a retinal source for sudden bilateral loss of vision can be readily identified by simply performing a dilated fundus examination.

The Optic Nerves, Chiasm and Cortex

Sudden bilateral vision loss may occur by insult at the level of the optic nerve, chiasm, or visual cortex.

The Optic Nerves

The most common cause of an abrupt onset of vision loss in the optic nerve and cortex is vascular. Ischemia to the optic nerve is, for practical purposes, always visible as disc swelling and never embolic. Ischemic optic neuropathy (ION) is, unfortunately, relatively common, and although almost always unilateral, the contralateral eye may become involved in 30-40% of cases of non-arteritic ION. This is likely because of the risk factors (anatomic configuration of the disc, diabetes mellitus, and systemic arterial hypertension) that favor infarction of the optic nerve at the disc prevail for both eyes of an individual. Nonetheless, in non-arteritic ION simultaneous bilateral disc swelling is rare, and when it occurs, vasculitis or severe reno-vascular hypertension should be considered.¹⁰ There is also evidence that patients with chronic hypertension that have aggressive lowering of blood pressure by medical intervention may develop bilateral non-arteritic ischemic optic neuropathy. Similarly extreme hypotension from rapid blood loss, for example, may also result in bilateral ischemic optic neuropathy by dropping perfusion pressure.

The most common vasculitic cause of ION is temporal arteritis, and while it doesn't usually cause simultaneous bilateral ischemic optic neuropathy, it can cause rapidly sequential ischemic optic neuropathy. It is sequential in 75% of cases.¹¹ If temporal arteritis is suspected, management must be swift and aggressive and temporal artery biopsy performed within two weeks of onset of therapy to confirm the diagnosis.

There are several toxins that may damage the optic nerve including methanol and ethylene glycol. These may result in a rapid onset of bilateral optic neuropathy with or without disc swelling.¹² Isoniazid and ethambutol are two of the more common pharmaceutical agents that may cause a relatively rapid loss of vision from bilateral optic nerve toxicity.

Rapid onset of visual loss from bilateral optic neuropathy may result as well from radiation damage. The onset of vision loss usually occurs from a few months to several years after therapeutic radiation. Radiation damage may occur as well at the levels of the retina, chiasm, and visual cortex.

Infiltrative and inflammatory conditions affecting the dural sheath of the optic nerves may produce rapid bilateral vision loss. Examples are carcinomatous meningitis, sarcoidosis, leukemic and lymphomatous infiltration.¹³ Luetic perineuritis in patients with AIDS may cause rapid and irreversible bilateral vision loss.¹⁴

Table 2

Optic Nerve/Chiasm	
Toxic	methanol, ethylene glycol, lead, ethambutol
Ischemia	vasculitic, non-vasculitic
Compressive	tumors, vascular
Pituitary apoplexy	Sheehan's syndrome
Demyelinative	MS (optic neuritis), Devic's
Hereditary optic atrophies	Leber's
Radiation	
Trauma	
Infiltrative, inflammatory, infectious	

Of course, trauma may cause acute loss of vision bilaterally throughout the entire visual pathway. The mechanism may be direct tissue trauma, interruption of blood supply, or compression by hemorrhage.

Terson's Syndrome (vitreous hemorrhage after subarachnoid hemorrhage) may cause abrupt bilateral vision loss.

The only hereditary optic neuropathy that produces acute vision loss is Leber's hereditary optic neuropathy,¹⁵ and this is sequential rather than bilateral.

The Chiasm

Compressive lesions of the chiasm commonly cause gradually progressive visual loss. Meningiomas have been reported to cause abrupt vision loss, though this is usually monocular. Pituitary apoplexy, in the sense of hemorrhage from a pituitary tumor, may cause acute bilateral vision loss. Aneurysms have been known to cause acute loss of vision. Bilateral vision loss is a potential complication as well from neurosurgical procedures involving the area around the chiasm.

Demyelinating disease, as in Devic's disease, may cause relatively rapid bilateral vision loss, although this usually proceeds over days.

The Visual Cortex

As previously stated, the most common cause of sudden vision loss at the level of the cortex is vascular. Stroke here may be embolic, vasculitic, hemorrhagic, or due to shock. Rupture of an occipital arteriovenous malformation may cause rapid loss of vision.

In contrast to lesions of the optic nerves and chiasm, pupillary light responses would remain normal with cortical lesions as the pupillary fibers leave the afferent visual pathway before the cortex. It may therefore become a challenge to distinguish between cortical blindness and that due to hysteria or malingering. Some details of the visual

Hemorrhage	

fields, if obtainable, may be useful in distinguishing true cortical blindness.

An extremely constricted visual field with a central island of a few degrees may be present in both visual loss of organic or non-organic etiology. Detailed formal visual field testing in a case of organic visual loss will show a vertical step which reflects the strict vertical segregation in the visual cortex. The field of a malingering or hysterical patient may show only a central island of vision, but no vertical respecting step will be seen. Also the malingering or hysterical patient will be able to avoid bumping into objects placed in his path, whereas the patient with an organic etiology will be unable to avoid such objects. There are many methods used to determine vision loss of non-organic etiology, but these are beyond the scope of this paper.

In cases of sudden bilateral visual loss the following approach may be productive. A thorough history should be taken and vital signs noted. Some assessment of remaining vision including peripheral vision should be made. Pupils should be evaluated. If they react poorly to light but quite well to near, that points to a defect in the retina, optic nerve or chiasm. If the pupils react normally to light then either the defect is not profound or it is in the occipital cortex or it is non-organic. The fundus should be evaluated for a retinal abnormality, a vascular abnormality or disc swelling.

Sudden bilateral visual loss is devastating. Unless the cause is immediately apparent ophthalmic consultation should be obtained and neuroimaging considered. Magnetic resonance imaging is generally the best modality for evaluating the retrobulbar portion of the afferent visual system. □

Intraocular Foreign Bodies and the Ruptured Globe

Ocular trauma is commonly seen in all hospital emergency rooms and outpatient emergency facilities. Ocular trauma accounts for 3% of urban emergency room trauma visits and 5% of hospital trauma admissions.¹ Ocular trauma, especially if bilateral, can result in a severe long-term disability. Severe ocular trauma (ruptured globe or intraocular foreign body) is six times more common in males.² The home is the most common injury setting, followed by the workplace and assault. In some urban hospitals, assault is the most common setting. Age specific rates of severe trauma are distributed bimodally, with the highest peak in adolescents and young adults, and another peak in the elderly over age 65.^{2,3} This second peak is the result of falls associated with ruptured globes in the elderly population. As with most forms of trauma, a disproportionate share occurs in African-Americans.

A ruptured or open globe injury can occur either as the result of a penetrating object or projectile, or from blunt trauma causing a scleral rupture. The eye is a closed sphere and the volume of a closed space cannot be changed. When the eye is compressed along its anterior-posterior axis by blunt trauma, it will expand in the horizontal plane until the sclera ruptures. Penetrating ocular injuries with retained intraocular foreign bodies are usually preventable with proper care and eye protection. Projectile weapons (BB guns or firearms), hammering of metal on metal, and explosions are frequent causes.⁴

Evaluation of Severe Ocular Trauma

When evaluating trauma around the eye or face there are two important points to remember. First, it is important to consider the possibility of an eye injury and to evaluate the eyes. Patients under the influence of alcohol or drugs or patients with head trauma may not be able to communicate eye pain or decreased vision. Second, it is important not to overlook more serious head injuries when faced with an obvious ruptured globe. This is particularly important with perforating eye injuries when the perforating instrument or foreign body extends through the bony orbit and into the brain.

History

A detailed description of how the injury occurred is extremely important. This history may guide the diagnostic studies involved, specifically with regard to the pres-

ence of an intraocular foreign body. Anytime there is hammering of metal on metal an intraocular foreign body is possible. Injuries involving an explosion, shattered glass, or flying debris should also raise this suspicion. The history surrounding the incident should be carefully documented and may be important for future medico-legal actions.

The patient's pre-injury ocular status is also important. If the eye had very limited vision prior to the injury, the management of the current injury may be different. Some mentally impaired patients or patients with alcoholism experience repeated episodes of ocular trauma and the true timing of the injury may be difficult to determine. Since surgery is likely, a history of systemic diseases, known allergies, and current medications should be obtained. The patient should be kept from eating or drinking until immediate surgery is excluded. Inquiry as to the patient's last tetanus immunization should be made.

Examination

The patient should first be evaluated for associated injuries, including serious head injury. Other injuries can be missed by the patient or examining physician in the presence of a painful disfiguring eye injury (Figure 1). The patient's best possible visual acuity should be measured in each eye separately. Vision should be checked with eyeglasses on and through a pinhole to correct any refractive error. In the absence of an eye chart the patient's vision may be checked with a newspaper by asking the patient to read either the fine print or larger headlines. If the patient is unable to read an eye chart, acuity should be recorded as follows: ability to count fingers at the farthest possible distance, ability to see a moving hand in front of face, light perception, or no light perception. To evaluate vision or examine a traumatized eye with severe lid swelling, it may be necessary to assist the patient by holding the eyelid open. This should be done by holding the lid against the orbital rim, avoiding any pressure on the globe.

In the presence of a gross ocular rupture, examination and handling should be minimized to avoid further disruption of the eye. Any extruding ocular tissue should be left and dealt with in the operating room. In the absence of a gross rupture, slit lamp examination is carefully performed. The integrity

Figure 1: Perforating eye injury with gross ocular disruption. CT scan reveals an intra-orbital and two intracranial metallic foreign bodies.

Figure 2: A dense white cataract forming hours after a small perforating corneal wound with disruption of the lens capsule.

Figure 3: Intraocular foreign body embedded in the retina and partially obscured by hemorrhage.

Figure 4: Foreign body embedded in the lens in an eye with good initial vision.

of the conjunctiva and cornea are first examined. Scleral lacerations or penetrations may be occult with only subtle signs of conjunctival disruption. A scleral laceration should always be suspected when there is a conjunctival laceration. Corneal or corneoscleral lacerations may result in a flat anterior chamber with prolapsed iris tissue. This prolapsed tissue often results in an irregular or teardrop-shaped pupil. Disruption of the lens may be subtle or hidden by the iris. A dense white cataract in an eye with prior sight is an obvious sign of lens disruption (Figure 2).

Fundus examination by indirect ophthalmoscopy may not be possible due to anterior segment disruption or vitreous hemorrhage. If possible, fundus examination is necessary to exclude a retinal detachment or significant retinal injury. Intraocular foreign bodies may be seen either in the vitreous cavity or embedded in the retina (Figure 3). Small intraocular foreign bodies may

cause little disruption of the anterior segment, little or no pain, and no change in vision (Figure 4).

Ocular findings associated with an occult scleral rupture from blunt trauma include very poor initial vision, conjunctival chemosis, subconjunctival hemorrhage, hyphema, a deep anterior chamber, below normal or very low intraocular pressure and limited eye movement (Table 1). Conjunctival chemosis (swelling of the conjunctiva) and subconjunctival hemorrhage (Figure 5) may be generalized or it may be confined to

the region of the rupture. A deep anterior chamber (Figure 6) is the result of the iris and lens shifting posterior as a portion of the intraocular contents extrude from the rupture. A hyphema (bleeding in the anterior chamber layering inferior) is often total and may preclude the evaluation of the anterior chamber depth (Figure 7). Low intraocular pressure is common with ruptured globes, but a normal or elevated intraocular pressure does not exclude the possibility of a rupture. The scleral rupture can be closed by a blood clot or orbital contents allowing the intraocular pressure to rise, even above normal.

Diagnostic Studies

Radiologic studies are helpful, especially when there is concern for an intraocular foreign body. Computerized tomography (CT) scanning with thin cuts through the orbits is the preferred method of evaluation and has replaced plain x-ray films. A CT scan will often reveal scleral ruptures and accurately localizes intraocular foreign bodies (Figure 8).

Table 1

Findings Associated with an Occult Scleral Rupture

Initial visual acuity less than hand motions
Low intraocular pressure
Subconjunctival hemorrhage: diffuse or focal
Conjunctival chemosis: diffuse or focal
Hyphema
Deep anterior chamber
No fundus view
Poor ocular motility

Figure 5: Eye with massive conjunctival chemosis and subconjunctival hemorrhage. Exploration revealed occult scleral rupture (Figure 10).

Figure 6: Subconjunctival hemorrhage and deep anterior chamber in a traumatized eye with an occult scleral rupture.

Figure 7: Traumatic hyphema with blood layered in the anterior chamber and clotted blood in the pupillary space.

The accurate localization of foreign bodies is crucial when planning their surgical removal. Metallic foreign bodies are easily seen with CT scanning or plain x-ray films. Non-metallic foreign bodies are usually missed with plain films but are usually picked up by CT scanning or B-mode ultrasonography. Ultrasonography is also helpful for finding most occult scleral ruptures. Although imaging studies are helpful for finding small scleral ruptures, some can be missed with any imaging method. CT scanning also helps rule out orbital and intracranial injuries. Magnetic resonance imaging is contraindicated if there is any possibility of an intraocular metallic foreign body.

Management of Severe Ocular Trauma

Eyes with known or suspected ruptures should be protected with a hard shield sup-

ported by the bones of the face. Analgesia is helpful in reducing patient anxiety and reducing eyelid spasm, thus relieving pressure on the globe. Broad spectrum antibiotics are recommended in obviously ruptured globes or eyes with foreign bodies. Tetanus immunization should be given if appropriate. The timing of surgery is often dependent

on the patient's history of last known food or fluid intake because general anesthesia is preferred. Local anesthesia requires injections around or behind the eye, increasing pressure on the eye and risking further loss of ocular contents. Anesthetic induction without succinylcholine is preferred because it is associated with extraocular muscle contraction, causing increased intraocular pressure.

Exploration and Repair of Ruptured or Open Globes

Any ruptured globe or eye with an intraocular foreign body requires urgent repair to prevent further disruption of ocular contents and to decrease the chances of intraocular infection (endophthalmitis). Although there is some urgency to the repair, this does not preclude waiting until general anesthesia is safe if the patient has recently eaten or if the patient is under the influence of drugs or alcohol. Surgery should also be delayed until informed consent can be obtained from the patient or legal guardian.

Penetrating ocular injuries should be approached by repairing the anterior segment first before moving more posterior. If there is a corneoscleral laceration or limbal rupture, the limbal landmarks should be approximated first to maintain proper orientation of the wound (Figure 9). The conjunctiva is cut free

Figure 8: Axial CT scan of intraocular metallic foreign body localized to the posterior scleral wall.

Figure 9: Repaired corneoscleral laceration.

Figure 10: Posterior scleral rupture with extruding uvea under the lateral rectus muscle.

Figure 11: Retained intraocular foreign body in an eye with normal visual acuity.

from the limbus and gently lifted up. The scleral laceration is then sutured as it is exposed to prevent further extrusion of ocular contents. Extruding intraocular contents are repositioned unless necrotic, infected or disorganized.

Injured eyes with any signs of an ocular rupture should be explored surgically if an adequate fundus view cannot be obtained. Exploration for an occult rupture or laceration produces few, if any, postoperative complications and the primary risk is the general anesthesia. The anterior sclera is inspected and repaired first while cautiously moving more posterior. Each rectus muscle is carefully hooked and the sclera under the muscle is inspected. The sclera is thinnest under the muscles and this is a frequent site of occult rupture (Figure 10).

The initial objectives for surgical repair of a ruptured or open globe are closure of the wound and removal of any foreign bodies. If the lens capsule is disturbed the lens may be removed during the initial operation. Repair of damaged intraocular contents including the uveal tract (iris, ciliary

body, and choroid) and retina is frequently deferred for one to 10 days. This deferral decreases the risk of uncontrolled intraocular hemorrhage and allows for careful ultrasonographic evaluation to assess the problems present. If there is significant choroidal hemorrhage present repair is frequently delayed for seven to 10 days to allow the clotted blood to liquefy. Repair of posterior segment intraocular damage should not be unduly delayed because significant fibrous ingrowth begins after one to

two weeks which may prevent adequate repair. Repair of these problems requires either vitrectomy surgery, scleral buckling surgery, or both.

Many eyes with severe ocular trauma will eventually require surgical removal of the eye (enucleation). This is rarely performed at the time of the injury because it may be difficult to predict the prognosis for the eye and psychologically it is very difficult to accept immediate enucleation. The loss of an eye is easier to accept several days after the traumatic event with the realization that the eye does not function and that attempts were made to save the eye. However, when the eye is severely disorganized it may require primary enucleation.

Removal of a blind eye is not necessary unless there is severe pain or cosmetic disfiguration. Enucleation of a blind eye may also be considered if the eye is severely disorganized to reduce the risk of sympathetic ophthalmia.

Intraocular Foreign Bodies

Ocular injuries with retained intraocular foreign bodies represent a distinct subgroup requiring special therapeutic considerations. Most foreign bodies are metallic. In adults this injury is frequently the result of hammering metal on metal.⁴ In children projectile weapons, primarily BB guns, are the most common cause. Magnetic metallic foreign bodies can be removed from the eye with strong external electromagnets. However, the role of this method has diminished with improved vitrectomy techniques which offer a more controlled foreign body extraction and an immediate repair of intraocular damage. For non-magnetic foreign bodies vitrectomy surgery is the only method of removal.

There are many instances where intraocular foreign bodies have been left in the eye

Figure 12: Endophthalmitis with a small anterior chamber hypopyon following an unrepaired perforating wound to the superior cornea.

and some eyes have retained good vision (Figure 11). However, some forms of iron, if left in the eye, can result in progressive leeching of ferrous ions which cause retinal degeneration and eventually blindness. Copper is particularly toxic inside the eye and should be removed immediately. Many materials such as aluminum, metal alloys, plastic, and others are known to be non-toxic inside the eye. However, these should be removed, if possible, soon after the injury to decrease the chance of infection.

Foreign bodies which perforate the eye (enter anterior and exit posterior) are usually left in the orbit (Figure 1). Except for an initial risk of infection these pose little risk for future problems. Removal of these orbital foreign bodies may be difficult or impossible without causing further ocular damage. Perforation through the orbit into other structures, especially the brain, obviously should be excluded.

Endophthalmitis Associated with Ocular Trauma

Intraocular infection complicates only 2-7% of penetrating ocular injuries.⁵ Although uncommon, endophthalmitis is much more common after trauma (Figure 12) than following intraocular surgery. Postoperative endophthalmitis is usually due to staphylococcal species and has a relatively favorable prognosis. In contrast, post-traumatic endophthalmitis is generally more severe with a poorer prognosis due to organisms such as *Bacillus* species.

While their benefit is yet to be demonstrated conclusively, prophylactic systemic antibiotics are widely used following penetrating trauma. Prophylactic antibiotics are not required in occult ruptures because there is no exposure of intraocular tissue except in the operating room. Due to the poor penetration of systemic antibiotics into the eye, intraocular antibiotics are required

whenever endophthalmitis occurs. Intraocular prophylactic antibiotics are not routinely given with trauma because there is potential toxicity. However, in selected cases intraocular antibiotic injections should be considered even without signs of infection.⁶ Organic and soil contaminated penetrating objects and intraocular foreign bodies are at high risk for severe infections which can cause complete ocular destruction in less than 24 hours.

Sympathetic Ophthalmia Following Severe Ocular Trauma

Sympathetic ophthalmia is a rare condition that can occur subsequent to ocular trauma, which causes damage or destruction of the eye which was not injured. It is believed that ocular trauma with exposure of uveal pigment in the inciting eye creates an immune response to uveal pigment. This results in a granulomatous uveitis affecting both the inciting eye and the uninjured or sympathetic eye (Figure 13). Control of this immune response may require chronic steroids or immunosuppressive agents to prevent severe damage to the sympathizing eye. The incidence of this condition in older literature was much higher but today it occurs in less than 0.5% of ocular injuries.⁷ It is believed that prompt surgical repair with restoration of ocular organization decreases the incidence of sympathetic ophthalmia. Enucleation of blind, severely disorganized eyes following ocular trauma should be considered to reduce the risk of this rare but devastating condition.

Prognosis

The prognosis following severe ocular trauma is highly variable. If the injury is limited to the anterior segment useful vision, sometimes normal vision, can often be preserved. Eyes with retained intraocular foreign bodies can also recover well depending on what tissues were penetrated. Some injuries with foreign bodies, especially weapons-related injuries, carry a very poor prognosis. The prognosis for posterior segment injuries, especially posterior scleral ruptures, is often poor. Even when the scle-

Figure 13: Uveal inflammatory infiltration two weeks after an unrepaired penetrating wound to the opposite eye.

ra is closed without loss of intraocular contents the damage to the retina and uveal tract is frequently severe. However, with improved vitreous surgery techniques and instrumentation, certain eyes can be salvaged that were previously lost. In the future methods of controlling fibrocellular proliferation will allow even more eyes to be saved. □

Endophthalmitis

In contrast to superficial ocular infections such as conjunctivitis and keratitis, endophthalmitis is an infection of the interior cavities of the eye, particularly the vitreous. Therefore, endophthalmitis is particularly vision threatening and physicians have an important role in the diagnosis and management of this condition. This role includes: to recognize the predisposing factors, symptoms and signs of endophthalmitis in their patients; to assist ophthalmologists in appropriate antibiotic selection; and third, to help to manage associated systemic disorders.

Endophthalmitis can be classified into two general categories: endogenous and exogenous. While exogenous endophthalmitis is much more common, we will first consider endogenous endophthalmitis because of its significance for systemic disease.

Endogenous Endophthalmitis

Endogenous endophthalmitis is uncommon in the general population, but is a major potential concern in patients with systemic sepsis. While several studies have found a high frequency of endophthalmitis in patients with systemic fungal infections (28-45%), a recent prospect study found that none of 118 patients with Candidemia developed frank endophthalmitis, although chorioretinitis was found in 9% of the patients.¹ These results suggest that routine ophthalmologic screening of septic patients may not be warranted. However, patients with decreased vision, a red eye, or hypopyon (pus in the anterior chamber) should receive prompt ophthalmological evaluation.

Symptoms and signs of metastatic endophthalmitis are qualitatively similar, but may differ in degree depending on the organism. Since endophthalmitis is, by definition, an infection involving the vitreous, patients will invariably describe floaters and/or decreased vision if they are sufficiently alert. The floaters are due to inflammatory cells in the vitreous. Most patients also will have white lesions in the retina indicating retinitis. In addition to the posterior ocular seg-

ment inflammation, patients usually will exhibit varying degrees of anterior segment inflammation such as ciliary flush (injection of the blood vessels around the cornea), keratic precipitates (inflammatory cells adherent to the corneal endothelium), visible cells floating in the anterior chamber and aqueous humor flare, and if severe, a hypopyon. Milder degrees of inflammation, usually with a vitritis and anterior segment inflammation are more likely to be seen in metastatic fungal endophthalmitis such as due to *Candida*, whereas metastatic bacterial infections, regardless of the species, generally produce more severe inflammation and are more likely to be associated with hypopyon. Suppurative infections from *Clostridia* can affect the orbits and tissues, resulting in a panophthalmitis.

Metastatic endophthalmitis should be suspected in patients with known or possible septicemia. The most common form of metastatic endophthalmitis is fungal, usually *Candida*, *Aspergillus*, *Cryptococcus*, and less likely *Coccidioides immitis*, or *Blastomycosis*. Predisposing factors to endogenous fungal endophthalmitis are shown in Table 1.

Case Report

A 58-year-old female with poorly controlled, long standing Type II diabetes presented with low back pain of several months' duration. She was found to have group B streptococcal sepsis with endocarditis, a lumbar epidural abscess, and meningitis. She was treated with intravenous antibiotics for one month but continued to have a low grade fever, and sterile blood cultures. She then was noted to have mild redness and decreased vision in her

right eye. Visual acuity in her right eye was 20/100 and in the left eye was 20/25. The right cornea had keratic precipitates and there were cells floating in the anterior chamber but no hypopyon. There was a mild ciliary flush, pupillary dilation was restricted because of adhesions between the iris and anterior lens, and there were numerous white opacities in the vitreous which impaired visualization of the retina. The left eye had nerve fiber layer hemorrhages, infarcts, and microaneurysms consistent with nonproliferative diabetic retinopathy. The right eye was treated with topical cycloplegics and steroids for 24 hours, but did not improve. Because of her diabetes, an indwelling catheter, and long term intravenous antibiotics, metastatic fungal endophthalmitis was suspected. A vitreous aspiration was performed under subconjunctival anesthesia at the bedside with a 25 gauge needle. Gram stain and fungal stains revealed no organisms, but *C.albicans* grew on Sabauroud's medium. Five micrograms of amphotericin B were injected into the vitreous cavity at the time of the aspiration. Systemic intravenous amphotericin B was begun, and over two weeks the ocular inflammation subsided and her vision gradually improved.

The above case is typical of metastatic fungal endophthalmitis. For endogenous bacterial endophthalmitis the predisposing risk factors are similar, with diabetes, gastrointestinal disorders, hypertension, heart disease and malignancy leading the list. A recent review found that *Streptococci* and *Staphylococcus aureus* were the most common organisms, with endocarditis and urinary tract or gastrointestinal tract infections, the most common sources of infection.³

Meningococcal endophthalmitis is an uncommon entity, but deserves a particular mention. Children with meningococcemia may develop conjunctival and corneal edema, hypopyon, vitreous inflammation, and increased intraocular pressure. This is one situation in which intravitreal antibiotics are generally not indicated and vitrectomy is probably contraindicated. Fortunately, penicillin penetrates the eye very well and meningococcal endophthalmitis often has a very good visual outcome.

Successful treatment of endogenous metastatic endophthalmitis depends on proper identification of an inflamed eye as an endophthalmitis, identification of the positive organism and its source, and appropriate ocular treatment. Cultures should be obtained from any

available source including blood, urine, skin abscesses, or indwelling intravenous catheter tips. For systemic fungal infections amphotericin B is often the treatment of choice; however, amphotericin B penetrates the eye very poorly and fluconazole provides better ocular penetration. When bacterial infection is suspected the antibiotics should cover *Streptococci* and *Staphylococci* unless gram negative organisms such as *E.coli* are identified.

Exogenous Endophthalmitis

Endophthalmitis from organisms arising outside of the eye constitutes the most common route of infection. Some penetration of the globe is required, and this usually follows cataract surgery, although other forms of ocular surgery including vitrectomy or glaucoma filtering surgery may also be involved. Endophthalmitis generally complicates approximately one in 1,000 cases of routine ocular surgery and is a cause of great distress to the patient and surgeon who share high expectations. Predisposing factors include preoperative conditions in the patient such as diabetes, urinary tract infection, poor hygiene, blepharitis, or dacryocystitis.

Intraoperative risk factors include prolonged operating time, escape of vitreous out of the eye into the wound (vitreous loss), and contact of surgical instruments with eyelids and lashes. Postoperative factors include wound leaks, trauma, or contact lens wear. The risk of endophthalmitis can be minimized by addressing the overall status of the patient preoperatively, as well as by applying povidone-iodine solution in the cul-du-sac and in the surgical field. Although preoperative topical antibiotics can help to reduce the bacterial counts of the conjunctiva there is no established data which proves that this treatment reduces the risk of endophthalmitis.

Classically, postoperative endophthalmitis presents one to seven days postoperatively with decreased vision, floaters, marked conjunctival injection and chemosis, corneal edema, hypopyon, fibrin in the anterior chamber, and inflammatory reaction in the vitreous. Vi-

Figure 1: Corneal edema, conjunctival injection, and hypopyon in an eye three days after uneventful cataract surgery.

sual acuity is often 20/200 or less (Figure 1). Any patient with increasing ocular inflammation after surgery should be considered to have endophthalmitis until proven otherwise. The diagnosis depends upon adequate sampling of the vitreous fluid; removal of aqueous fluid from the anterior chamber has a high rate of false-negative cultures. The vitreous sample may be obtained by aspiration of vitreous through the limbus with a needle in a clinical or office setting under topical anesthesia. However, vitreous biopsy during vitrectomy has a higher yield. The ocular fluid should be cultured on media for aerobic and anaerobic organisms, as well as fungi. The most common organisms are *Staphylococci*, but *Pneumococci* and Gram negative organisms, particularly *Klebsiella*, should be considered, especially after glaucoma surgery. *Streptococci* cause a particularly fulminant endophthalmitis with a very poor prognosis.

In addition to the classical acute postoperative presentation of endophthalmitis, more chronic forms of endophthalmitis have recently been recognized. Such patients typically have persistent low grade ocular inflammation which waxes and wanes for weeks to months, and some patients have presented up to one year following cataract surgery. The organisms to consider in chronic endophthalmitis include coagulase-negative *Staphylococcus*, *Candida* species, and *Propionibacterium acnes*. When the last organism is considered, the vitreous fluid should be inoculated into thioglycollate medium and be kept for at least two weeks by the microbiology laboratory.

The endophthalmitis which follows non-surgical penetrating ocular trauma usually has its onset within one week and *Bacillus* infections must be considered from the outset since these highly destructive organisms have particularly devastating effect.⁴

The optimal treatment of endogenous endophthalmitis is controversial at the time of

this writing (September, 1994). That is, successful treatment of postoperative endophthalmitis can be obtained using intravitreal antibiotics, with and without vitrectomy, and with and without intravenous antibiotics. Clearly intravitreal antibiotics should be applied and vancomycin with either amikacin or ceftazidime is generally appropriate initial therapy unless *Bacillus* is suspected, in which case one should add clindamycin.

To address the issue of optimal treatment of postoperative endophthalmitis, the Endophthalmitis Vitrectomy Study,⁵ a National Eye Institute sponsored multi-center randomized clinical trial, was conducted. This study of over 400 patients was designed to answer two questions: first, does initial vitrectomy improve the outcome compared to vitreous tap or biopsy; second, do intravenous antibiotics improve the outcome compared to ocular therapy alone? Patients who entered the study received intravitreal, subconjunctival, and topical antibiotics, as well as subconjunctival and oral steroids. They were followed with standardized visual acuity measurements, clinical examinations, and photographs for at least nine months from the initial diagnosis. Although patient recruitment has been completed, follow-up and data analysis are not yet finished so the answer to these questions remains temporarily unresolved.

Despite the current limitations in our understanding, the laboratory and clinical investigations by numerous investigators, and the increased emphasis on early diagnosis have improved the visual prognosis for patients with endophthalmitis. Nevertheless, high index of suspicion and prompt diagnosis and treatment remain the foundation of management, and optimal outcomes depend on close communication and collaboration between the ophthalmologist and the patient's general physician. □

Pupillary Abnormalities

Examining and understanding pupillary reactions is important in all fields of medicine, from ophthalmology and neurology to internal medicine and family practice. The pupil examination is crucial in many medical and surgical emergencies and can help differentiate between life-threatening and completely benign situations. For ophthalmologists, the pupil examination is of critical significance because it is the only objective evaluation of visual function.

Nary an admission physical examination performed by a medical student or resident in any discipline fails to include the abbreviation “PERRLA” (or some variation thereof) within the context of a head and neck exam. The medical students at our institution have informed me that this ubiquitous abbreviation suggests that the pupils are equal and round and that they react to light and accommodation. Few students, however, have been able to provide me a cogent clarification of the importance of performing a pupil examination as part of a complete physical on every patient; fewer still even know what accommodation means. It has been my contention that it is bad for the patient when the doctor doesn’t know what she or he is doing; it is bad for the doctor when he or she records a poorly understood physical finding on a medicolegal document.

The purpose of this endeavor is to review the relevant and critical neuroanatomy of the pupillary pathways, describe the proper examination of the pupils, and discuss important abnormalities affecting the pupils. Hopefully, the reader will better understand this critical part of any physical examination.

The eye-as-camera analogy is oft-repeated and will be invoked here as well. The pupil of the eye acts as the aperture of a camera, adjusting the amount of light reaching the retina (film) to optimize vision in different illuminations and increase the depth of field required to do exacting near work. The size of the pupil is regulated by the antagonistic components of the autonomic nervous system, the sympathetic and parasympathetic limbs.

In order to understand the clinical implications of pupillary abnormalities, it is necessary to first review the pertinent neuroanatomy.

Anatomy of the Afferent Pupillary Pathway

The afferent limb of the pupillary response to light begins with the photoreceptors (rods and cones) of the retina. Once activated by light, the photoreceptors transfer the signal to the retinal ganglion cells. The axons of the ganglion cells form the nerve fiber layer of the retina and coalesce at the optic disc. Along with the axons originating from ganglion cells subserving vision, the pupillomotor fibers comprise the 1.2 million axons of each optic nerve.

Afferent pupillomotor fibers, as well as visual sensory fibers, undergo hemidecussation (fibers originating from ganglion cells in the nasal retina cross; fibers from temporal retina do not) at the optic chiasm. The pupillary pathway continues to follow the visual pathway into the optic tracts. Unlike the visual pathway (which is destined for the lateral geniculate nucleus), the pupillary pathway enters the brainstem via the brachium of the superior colliculus. The axons synapse finally in several pretectal nuclei, including the pretectal olivary and sublentiform nuclei. These pretectal nuclei then project via intercalated neurons to both ipsilateral and contralateral Edinger Westphal nuclei within the oculomotor nuclear complex. The afferent limb of the pupillary light reflex is thus complete and the efferent parasympathetic limb (see below) is activated.

Anatomy of the Efferent Pupillary Pathways

While pupillary size and reactivity are determined by input from both parasympathetic and sympathetic fibers, the more powerful controlling force is the parasympathetic system because of the relative strength of the iris sphincter compared to the dilator. Both systems will be considered in turn.

Parasympathetic Pathway

Parasympathetic control of the pupil originates in the midbrain in a complex group of subnuclei within the oculomotor nuclear complex. These paired midline nuclei include the Edinger Westphal complex, the anterior median nucleus, and Perlia’s nucleus. These nuclei contain the cell bodies of

Medical Center*

the neurons that supply the preganglionic parasympathetic fibers to the ciliary ganglion. The efferent parasympathetic fibers course through the midbrain with the fascicles of the oculomotor nerve and exit the midbrain in the interpeduncular space with the oculomotor nerve. The oculomotor nerve travels in the subarachnoid space, through the cavernous sinus, and enters the orbit through the superior orbital fissure. Within the orbit, the oculomotor nerve physically divides into superior and inferior divisions and the pupillary fibers follow the inferior division to synapse at the ciliary ganglion at the apex of the orbit, about 1 cm in front of the medial end of the superior orbital fissure. The ciliary ganglion lies between the optic nerve and the lateral rectus muscle. Postganglionic fibers then innervate the iris sphincter and the ciliary body.

Sympathetic Pathway

The motor control of the iris dilator muscle is supplied by the sympathetic pathway. The oculosympathetic pathway is functionally a three-neuron arc. First order neurons originate in the hypothalamus and descend through the brainstem to terminate in the intermediolateral cell column at levels C8 to T1 or T2 (ciliospinal center of Budge-Waller). The second order neurons ascend in the cervical sympathetic paraspinal chain, course over the apex of the lung, and synapse in the superior cervical ganglion, which is located roughly at the level of the angle of the mandible. The first and second order neurons comprise the preganglionic portion of the oculosympathetic pathway. The postganglionic axons of the third order neurons run on the surface of the common carotid artery. After the bifurcation of the common carotid, oculosympathetics follow the internal carotid artery and sudomotor and pilomotor facial fibers follow the external carotid. Within the cavernous sinus, the oculosympathetics hitch a brief ride with the sixth cranial nerve before joining the fibers of the ophthalmic nerve (the first division of the trigeminal nerve) and entering the orbit through the superior orbital fissure. Postganglionic sympathetic fibers then innervate structures including the iris dilator muscle and the smooth muscle of Müller, a thin strip of muscle in the upper eyelid. Interruption of the oculosympathetic pathway at any point will result in a smaller pupil (miosis) and a small amount of ptosis.

Examination of the Pupils

The pupils should be examined in both a semidarkened and lighted room. The shape and size of the pupils are carefully recorded in both illuminations. An irregularity in the pupil shape can be secondary to trauma, in-

cluding surgical, and local iris disease (e.g., melanoma). Abnormalities of pupil shape should be noted, but are seen best with the slit lamp. Any difference in the size of the pupils (anisocoria) is compared in the dark and in the light. Anisocoria secondary to a sympathetic pathway interruption is greater in the dark; that due to a parasympathetic lesion is greater in the light.

A bright source of light is used to test the pupillary light reactions in a room with the least amount of ambient light practical to make observations.¹ The patient is instructed to fixate in the distance to prevent the miosis that accompanies convergence and accommodation in the near triad (see below). When light is shined in either eye of a normal patient, both pupils constrict equally. The pupillary reaction in the illuminated eye is the direct response; the reaction in the other eye is the consensual response.

Recall that the afferent limb of the pupillary light reflex undergoes a hemidecussation at the optic chiasm and again in the brainstem (after synapsing in the pretectal nuclei). The light information recorded by one eye is split at the optic chiasm and again in the brainstem. Ipsilateral and contralateral Edinger Westphal nuclei are equally innervated and the ipsilateral and contralateral efferent limbs (the parasympathetic fibers coursing with the oculomotor nerves) innervate both pupil sphincters equally. Consequently, the direct and consensual responses are commensurate. Therefore, examining the direct and consensual pupillary light reactions is actually a test of a reflex arc. The afferent limb of the reflex is the optic (second cranial) nerve; the efferent limb is the oculomotor (third cranial) nerve.

After examining the direct and consensual responses of each pupil, the examination light is swung rapidly and regularly back and forth several times (swinging flashlight test²). In a normal patient, the pupils should not change in size when the light is moved quickly from one eye to the other since the afferent pathways are healthy and equivalent. Any change in pupil size during the swinging flashlight test is noted.

If the pupillary responses to light are normal, there is no need to check the responses to a near stimulus.³ There are no clinical situations in which the near response will be abnormal if the light response is normal. If, on the other hand, the pupils react poorly to light, the near response should be evaluated. The best near target to use is the patient's own thumb; in this way, proprioceptive as well as visual stimulation helps drive the near response. If the pupils react poorly to light but normally to a near stimulus, the condition of light-near dissociation is present.

Miosis is part of the so-called near triad, which also includes convergence and accommodation (recall “PERRLA”). Miosis (a small aperture) increases depth of field. Convergence of the visual axes places the image of the object of regard on the fovea of each eye and permits single binocular vision. Accommodation refers to contraction of the ciliary muscle and the resultant change in shape of the lens that adds focusing power to the eye. Accommodation technically does not characterize a pupillary reaction at all.

We will now consider in turn abnormalities of the afferent and efferent regulation of the pupils.

Afferent Pupillary Abnormalities

As noted above, shining light in either eye of a normal patient causes equal constriction of both pupils. A defect in the afferent limb (optic nerve) of the pupillary light response causes decreased or absent pupillary constriction. An optic nerve lesion decreases the afferent impulse and results in relative loss of the direct response to light on the ipsilateral side and the consensual response on the contralateral side. If, in the case of a unilateral optic nerve lesion, light is shined in the contralateral (unaffected) eye, the direct response of the illuminated (unaffected) eye is normal, as is the consensual response in the affected eye. The afferent information is conducted normally along the unaffected optic nerve, is divided at the optic chiasm and brainstem, and transmitted normally along both normal efferent limbs.

If the swinging flashlight test is performed on such a patient with a unilateral optic neuropathy, the pupil in the unaffected eye will consistently constrict as the light is moved to that eye, while the pupil in the affected eye will consistently dilate. The information is being transferred back and forth between a functioning afferent pathway and a disabled afferent pathway. It will appear as though the pupil in the eye with the optic nerve lesion is dilating to light stimulation. In fact, the pupil is not actually dilating to light, but the light is shifted from the normal side to the side with the afferent defect and less light information is conducted along the abnormal pathway.

The apparent dilation of the pupil to light during the swinging flashlight test is called a relative afferent pupillary defect (RAPD or Marcus Gunn pupil). Why is the afferent pupillary defect relative? Keep in mind that the pupillary light reaction of one side is being compared to that of the other during the swinging flashlight test. Consider the case of bilateral symmetric optic neuropathies, as in

Table 1

Causes of Relative Afferent Pupillary Defect

Optic neuritis
Ischemic optic neuropathy
Compressive optic neuropathy
Asymmetric optic atrophy of any etiology
Diffuse asymmetric retinal disease

ethambutol toxicity. While the afferent limb is damaged on both sides and both pupils will be less reactive than normal, we will not see a Marcus Gunn pupil because there is no relative difference in the afferent pathways.

The presence of an RAPD usually indicates ipsilateral optic nerve disease. A relative afferent pupillary defect will be detected in any case of unilateral or asymmetric bilateral optic neuropathy. Causes include optic neuritis, ischemic optic neuropathy, compressive optic nerve lesions, or any cause of optic atrophy. Other possible causes include asymmetric and significant retinal disease such as a retinal detachment or a central retinal artery occlusion.⁴ Occipital lesions, cataracts, refractive errors, functional visual loss, small macular lesions, or corneal abnormalities do not cause relative afferent pupillary defects (Table 1).

Efferent Pupillary Abnormalities

Parasympathetic Pathway

A lesion affecting the pupillary parasympathetic limb results in paralysis of the iris sphincter, producing pupillary dilation (mydriasis). The anisocoria is greater in the light than in the dark. Both direct and consensual responses on the ipsilateral side are absent.

Oculomotor Nerve Palsy

A complete oculomotor nerve palsy will result in a dilated nonreactive pupil due to involvement of the pupil parasympathetics. Because the oculomotor nerve also innervates the levator palpebrae, superior rectus, medial rectus, inferior rectus, and inferior oblique muscles, the patient will have an associated ipsilateral ptosis and the eye will be in the characteristic “down and out” position.

Pupillary involvement in an oculomotor nerve palsy is almost always accompanied by ptosis and an ocular motility problem. Isolated pupillary dilation as the lone sign of an oculomotor nerve palsy may rarely occur in uncal herniation, when the oculomotor nerve is compressed against the tentorial edge, or in basal meningitis.

Conversely, patients with acute oculomotor nerve palsies may present with or without pupillary involvement. In fact, pupillary involvement helps to diagnose acute oculomo-

Table 2

Aneurysms

Infarcts

Trauma

Tumors

tor nerve palsies. Acute oculomotor nerve palsies may result from relatively benign problems (diabetic cranial mononeuropathy) or life-threatening lesions (aneurysm at the junction of the posterior communicating and internal carotid arteries) (Table 2). If the pupil is involved, an aneurysm must be considered. If the pupil is spared but all other oculomotor nerve functions are significantly affected, an aneurysm is virtually excluded. The workup of a patient with a pupil-involving oculomotor nerve palsy includes an emergency MRI scan to exclude a large pituitary tumor that might have invaded the cavernous sinus and compressed the oculomotor nerve. If the MRI scan is unrevealing, a selective carotid arteriogram is indicated to rule out an aneurysm. A pupil-involving oculomotor nerve palsy is treated as an emergency because of the likelihood of an intracranial aneurysm.

The traditional teaching concerning pupillary involvement in compressive oculomotor nerve palsies is that external compressive lesions preferentially involve the pupillomotor fibers which run in the periphery of the nerve, while microvascular palsies preferentially involve the fibers furthest from the blood supply (those fibers to the extraocular muscles riding in the center of the nerve).

Tonic Pupil (Adie's Syndrome)

Adie's syndrome is seen most often in women (70%). It occurs in young adults (20-40 years of age) and is most often unilateral. The pupil is dilated and reacts extremely poorly to light and only slightly better to near stimuli. The characteristic finding on careful examination is segmental palsy of the iris sphincter muscle. Close observation may reveal vermiform undulations of the iris which occur even in the absence of light stimulation. The pupil redilates very slowly after near effort. The etiology is most often unknown; the localization of the lesion is in the post-ciliary ganglion pathway. It is a benign condition. The "syndrome" also includes diminished deep tendon reflexes. The pupil in Adie's syndrome is supersensitive to topical parasympathomimetics and the diagnosis can be confirmed by demonstrating pupillary constriction with dilute (1/8%) pi-

locarpine (a cholinergic agent typically used to treat glaucoma).

Sympathetic System

Horner's Syndrome

A lesion anywhere along the oculosympathetic pathway results in a Horner's syndrome.⁵ The clinical signs include miosis of the affected pupil which is more pronounced in dim illumination and ptosis that is usually 3mm or less due to involvement of the sympathetic control of the muscle of Müller in the upper eyelid. Painful stimuli or sudden loud noises can increase the anisocoria. Anhidrosis occurs only if the lesion occurs proximal to the bifurcation of the common carotid artery, where the sudomotor fibers split from the pupillomotor fibers. Thus, facial anhidrosis localizes the lesion to the preganglionic pathway. Enophthalmos is apparent only and due to the ptosis, as well as some elevation of the lower eyelid.

While the clinical presentation of a Horner's syndrome is usually sufficient to make the diagnosis, on occasion pharmacological confirmation is necessary. Instillation of cocaine 4-10% blocks the reuptake of norepinephrine at the neuromuscular junction of the iris dilator muscle. In the normal patient, this will cause the pupil to dilate but in a Horner's syndrome the pupil will not dilate due to the lack of norepinephrine at the synapse.

Localization of the lesion in Horner's syndrome is possible with topical hydroxyamphetamine 1%, which releases norepinephrine from the presynaptic terminal and causes pupillary dilation. In order for hydroxyamphetamine to work, the third order (postganglionic) neuron must be intact. Thus, in a patient with Horner's syndrome, pupillary dilation with hydroxyamphetamine implies an intact third

order neuron and therefore a preganglionic lesion. If the pupil does not dilate well to hydroxyamphetamine, the lesion is postganglionic.

The importance of localizing the lesion in Horner's syndrome lies in the difference in the differential diagnosis of first, second, and third order lesions (Table 3). First order neuron lesions include CNS and upper cervical cord problems (stroke, tumor, disk disease) and are accompanied by other significant neurological problems. Second order neuron lesions include apical lung tumors (Pancoast tumors) and chest trauma. A patient

with a Horner's syndrome and arm pain must be evaluated for apical lung or mediastinal tumors. Postganglionic (third order neuron) lesions include neck tumors or trauma and carotid artery dissection. Most isolated postganglionic Horner's syndromes are benign and do not require further evaluation.

In a young child, the presence of a Horner's syndrome is considered more ominous. A Horner's syndrome in the pediatric population might signal the presence of a neuroblastoma, as well as leukemia or lymphoma.

Miscellaneous Pupillary Abnormalities

Argyll Robertson Pupils

In 1869 Argyll Robertson published two papers reporting pupillary abnormalities in patients with tabes dorsalis. The characteristic abnormalities were: (1) the retina was sensitive to light (the patient had good vision); (2) the pupil did not respond to light; (3) there was normal pupillary constriction on near effort; (4) the pupils were very small (less than 2mm); and (5) the pupils constricted further to physostigmine but dilated poorly with atropine. Thus, light-near dissociation is the hallmark of Argyll Robertson pupils. In the vast majority of cases, Argyll Robertson pupils are bilateral.

Light-near dissociation is also seen in the dorsal midbrain (Parinaud's) syndrome, in which case the pupils are larger (4-5mm), as well as diabetes and chronic alcoholism.

Unilateral Pupillary Dilation

As mentioned previously, isolated pupillary dilation is a very uncommon presentation of an oculomotor nerve palsy. Other possible causes include seizure disorders and migraine.

Another relatively common cause of an isolated fixed and dilated pupil is inadvertent (or otherwise) instillation of atropinic agents in the eye. This problem particularly plagues ophthalmic assistants, nurses, and other healthcare workers. Typically, a young woman presents with an isolated unilateral fixed and dilated pupil complaining of a headache. The absence of supersensitivity to dilute (1/8%) pilocarpine helps rule out an Adie's syndrome; lack of response to more concentrated (1%) pilocarpine excludes an oculomotor nerve palsy and confirms atropinization (Figure 1).

Simple Anisocoria

Simple (physiological) anisocoria is the most common cause of a relative difference in the size of the pupils. In fact, most individuals have some degree of pupillary irregularity at one time or another. The difference is typically less than 1mm and the amount can vary from day to day. The anisocoria

Figure 1. Pharmacologically dilated pupil. A 27-year-old ophthalmic assistant presented with headache and markedly dilated and fixed right pupil. Pilocarpine 1/8% did not constrict either pupil, suggesting that an Adie's syndrome was not the cause. After instillation of pilocarpine 1% in both eyes (above), the left pupil constricted, but the right pupil did not change in size. The diagnosis of a pharmacologically dilated pupil was established.

may be greater in the dark, but is most often constant under various illumination levels. In contrast to most other pupillary abnormalities, the pupillary light and near reflexes are normal and ocular motility is full. It is more common with advancing age and can be confused with Horner's syndrome when a concomitant senile ptosis is present. Topical cocaine testing differentiates a pseudo-Horner's syndrome from true oculosympathetic paresis.

Conclusion

Evaluation of the pupils should be part of any complete physical examination. Normal pupillary function depends on the integrity of a variety of structures including the second and third cranial nerves, as well as mesencephalic nuclei. Anisocoria can be a presenting sign of a life-threatening emergency. Armed with a basic understanding of the neuroanatomy of pupillary regulation, the clinician is able to diagnose and further evaluate most clinically significant pupillary abnormalities. □

Fractures of the Orbit

Virtually all cases of head and mid-face trauma have potential ocular or neuro-ophthalmic sequelae. Once stabilized, these patients' visual and ocular symptoms often are their most significant concerns. The ophthalmologist must therefore assume an active role in their management. When facial fractures involve the orbit, ophthalmic considerations are central to the timing and scope of intervention. The indications for surgery are often substantially ocular and depend on the preoperative, intraoperative and postoperative assessment of the eyes.

The bones and soft tissues of the midface have evolved to support and protect the globe and its central nervous system connections. As with any good frame design they function both as a shield and, when their structural integrity is exceeded, as a mechanism to absorb the force of impact. Thus by anatomical design orbital fractures occur in fairly predictable patterns.

Evaluation of the Head Trauma Patient With Orbital Fractures

Given the proximity of the orbit to the airways, jaw, and intracranial space, an evaluation of a patient with orbital trauma includes a complete ocular, neurologic and facial assessment. Globe perforation and injury to the anterior segment, retina, optic nerve and ocular adnexal structures can occur directly from the impact or from bone fragments. Inquiry as to symptoms and signs may turn up unrecognized injuries such as airway obstruction from pharyngeal hematomas, epistaxis from sinus injury, dental malocclusion and trismus from mandibular instability, rhinorrhea from dural tears, and flattening of the cheek or antimongoloid slant of the lateral canthus from zygomatic displacement.

Computed tomography scans are the standard of care today and should be obtained in cases of severe facial trauma or if there is a suspicion of fractures in order to identify completely all areas of injury. Specifying axial and coronal fine cuts of the bones in question (bone windows) will improve the sensitivity of a scan. In this age of CT, plain films are redundant. MRI does not visualize bones as well as CT.

Orbital Floor Fractures

For several decades the treatment of orbital floor fractures has been the subject of debate. Published reports on the subject of-

ten have reflected significant patient referral and selection bias and frequently lacked data supported by proper ophthalmologic evaluation. Applying conclusions from the literature therefore requires considerable scrutiny. To date no large prospective study has been organized.

Isolated floor fractures typically occur medial to the infraorbital bundle. Two mechanisms of fracturing have been proposed.^{1,2} The hydrostatic theory stated that increased pressure of the orbital contents from direct trauma causes a downward force on the thin orbital floor. Alternatively the buckling theory implicates floor buckling with subsequent fracture resulting from an impact to the inferior orbital rim. Since the thickness of the floor is 0.5mm and that of the medial wall only 0.25mm, any theory ought to explain the occurrence of isolated floor fractures with seemingly direct evenly applied force. Most evidence supports the latter theory,³ however, both mechanisms may occur clinically.

Such bony injury may damage the infra-orbital neurovascular bundle. Downward migration of the inferior rectus and oblique muscle complex into the maxillary sinus can occur, but the findings of entrapment result predominantly from displacement of the surrounding fat and connective tissue. These result in numbness in the V2 distribution, enophthalmos, hypoglobus, orbital pain and diplopia. Edema, hemorrhage and tissue emphysema from the injury are more likely to initially cause proptosis. Unless there is a large amount of tissue displaced, enophthalmos tends to be a later finding that develops over the ensuing weeks to months with progressive scarring and orbital fat atrophy. Similarly, forced ductions can be deceptively difficult to interpret early on and diplopia can result from nerve injury and self limited soft tissue swelling rather than frank entrapment. In short the severity of the initial findings on exam do not necessarily correlate with the severity of the fracture nor do they necessarily indicate which patients are operative candidates. The importance of a thorough initial eye exam is that it serves as a baseline with which to compare subsequent exams for evidence of progression.

In 1974 Putterman and Urist⁴ retrospectively looked at a series of floor fractures treated without surgery and found that although 50% had diplopia at their initial ex-

amination, none had symptomatic diplopia or “cosmetically unacceptable” enophthalmos at six-month followup. They concluded that pure blowout fractures of the orbital floor were usually a self limited condition and should all be followed for six months before treating enophthalmos or diplopia.

Their opinion reflected the belief⁵ that surgery at this later time, once scarring had stabilized, would ensure proper implant sizing for the amount of enophthalmos and diplopia. Others had similarly questioned the indications for surgery to treat diplopia except in cases of severe fractures.^{6,7}

In contrast the observation that the late treatment of enophthalmos was

Figure 1a: CT scan showing a large orbital floor fracture with inferior soft tissue displacement into the maxillary sinus.

size. Their results indicated that prolonged observation and late surgical repair (> two months) yielded much less satisfactory results and contributed to debilitating diplopia and unacceptable enophthalmos.

Lastly they found that the dysesthesias from infraorbital nerve injury tend to resolve over the first post-operative year. The conclusions were that early enophthalmos is an indication for early intervention but its absence isn't predictive and that patients with a fracture large enough to create a risk for enophthalmos or with diplopia within 30° of primary gaze from orbital tissue entrapment benefit from early intervention.

In repairing a floor fracture the incision can be subciliary, or transconjunctival at the margin of the tarsus or in the inferior fornix. Cutting down to the orbital rim in either case can be done without violating the septum or entering orbital fat. A suture placed around the inferior rectus allows for its manipulation intraoperatively to confirm that tissue restriction is released. The fracture should be visualized to its most posterior extent. A transconjunctival approach provides the best exposure for visualization of the medial and lateral orbital walls as well. The transantral approach is now used only rarely as a means of elevating severely prolapsed tissue. A floor implant must be large enough to cover the defect and overlie stable bone. It should be thick enough particularly posteriorly to reduce enophthalmos but not to impinge on the muscle cone or optic nerve. A wide variety of implants have been utilized over the years including autogenous bone, allogenic sheets of dura and cartilage and alloplastic materials.¹² Bone plating undergoes unpredictable amounts of resorption. Allogenic tissues have a theoretical complication of infection when exposed to the open sinus; alloplasts such as gelatin film, silastic and supramid give good functional support but run the risk of extrusion and displacement. Bone substitutes such as polyethylene may prove useful to enhance orbital volume. As discussed below, plating systems can now provide a rigid scaffolding across larger fractures.

When performed by experienced orbital surgeons complications are uncommon but potentially catastrophic in that the involved eye often has normal acuity prior to surgery. A layered dissection rather than a direct skin incision over the orbital rim helps prevent complications from cicatricial vertical lid shortening and careful dissection avoids damage to entrapped structures. Implant extrusion can be minimized with proper fitting

Figure 1b: Upgaze is limited due to entrapment and displacement of the inferior tissues.

more difficult and less successful because of scarring and tissue atrophy led Smith and others to advocate “early treatment to minimize late complications.”^{1,7-9} Putterman subsequently modified his clinical approach so as to follow the patient until Hertel readings and motility had stabilized and then operate if still significantly symptomatic.¹⁰

Hawes and Dortzbach retrospectively looked at 51 floor fractures and divided them by the size of the fracture, volume of displaced tissue and time of repair.¹¹ A large fracture was taken as greater than half of the floor involved. The consideration of tissue volume was important because a seemingly small “trap-door” fracture could displace a disproportionately large amount of tissue. They found that none of their cases that presented early had enophthalmos, while 88% (7/8) of those presenting after two months had more than 2mm of enophthalmos, confirming that enophthalmos is not an early finding but rather a progressive condition. As had been suspected, patients with large fractures were most likely to develop enophthalmos. An additional finding was that diplopia in primary gaze that had not resolved within the first two weeks was less likely to resolve without surgery, although this could not be correlated with fracture

and fixation while using the smallest size possible. Blindness has been reported as a complication of floor fracture repair.¹³ This is thought to be from direct injury or vascular compromise of the optic nerve resulting from implant manipulation, excessive intraoperative retraction, orbital swelling and hemorrhage. An oversized or migrated implant can also compress neurovascular structures. It is prudent to estimate intraocular pressure at the time of closure with the implant in position.

Medial Wall Fractures

Medial wall fractures are less likely to be the cause of chronic enophthalmos and eye muscle entrapment. Nevertheless, in cases of unresolved symptoms following floor fracture repair, it is worth keeping in mind the estimate that one-third of floor fractures have associated medial wall fractures. These often go undetected without a careful review of the CT scan.

In the transcutaneous approach to medial wall fractures, care is taken when encountering the medial canthal tendon, lacrimal sac, trochlea and ethmoidal arteries.¹⁴ These fractures are generally more difficult to reduce with an implant because of the lack of bony support of the ethmoid air cells. As was mentioned they can be approached from a floor fracture incision as well.

Zygomatic Complex Fractures

The zygomatic bone and its articulations with the frontal, sphenoid, maxillary and temporal bones make up the zygomatic complex, fractures of which are the second most common facial fractures (second to those of the nose). The body of the zygoma is stronger than its neighbors and fractures infrequently.¹² Zygomatic complex fractures (ZCF) predictably involve: (1) a fracture from the inferior orbital fissure anteriorly through the floor and rim; (2) a fracture from the inferior orbital fissure through the maxilla and superiorly through the zygomatic buttress of the maxilla; (3) along the zygomaticosphenoidal suture and often through the frontal articulation; and (4) through the temporal articulation usually 1cm posterior to the zygomaticotemporal suture. Instability of these fractures can cause facial deformity, masticatory impairment, ocular misalignment and sensory nerve dysfunction. Because of the muscle forces, particularly the masseter muscle, across the fracture lines, reduction of ZCFs

must be rigid. Furthermore repair should take place in a timely fashion before fibrosis and resorption of bone limits the opportunity for adequate stabilization.¹⁵

Methods of repair such as antral packing and wire fixation have now almost exclusively been replaced by bone plating with miniplate (1.6mm thick), and microplate (0.8mm thick) systems. These give superior three dimensional stability and faster bone healing.¹⁶ Plating systems now utilize compression plates to add a vector counterforce across a fracture line under tension and countersinking so that the screws are flush with the plate. They do not limit CT or MRI studies.

Titanium and Vitallium (a cobalt-chromium-molybdenum alloy) micromesh has been utilized to span large or multiple internal orbital wall fractures.^{17,18} These can be fixed to the orbital rim and autogenous or alloplastic materials placed over them. They appear to be well tolerated, do not extrude and are not associated with an increased risk for infection.

Three point fixation has been shown to achieve optimal rigid fixation in a complete zygomatic complex fracture.¹⁹ Fixation at the frontozygomatic site is the most important point of stability and can be approached through a brow or upper lid incision.^{12,15} A subciliary or transconjunctival incision exposes the inferior orbital rim and floor fractures which are typically present. Sometimes ZCF repair must be undertaken sooner than the indications for floor repair would advocate. The rim and floor are then explored, but repair should still follow the guidelines for isolated floor fractures since this does not affect the stability of the ZCF repair. An intraoral approach is used to plate the fracture of the zygomatic buttress. In less severe fractures two point fixation or two point plus wire fixation may be adequate. Non-displaced fractures, isolated arch fractures or stable minimally displaced zygomatic fractures require no fixation or a closed reduction through a Gillies approach if they remain stable with followup.^{15,20,21}

Orbital Roof Fractures

The primary evaluation and management of orbital roof fractures must involve a neurosurgeon. Cerebral edema from bone fragments or from attempts to reduce the fracture can be life threatening. In addition, intracranial hemorrhage and meningitis are possible complications. The most significant orbital sequelae is persistent

Figure 2: CT of a medial wall fracture.

leakage of CSF causing proptosis. Fortunately this usually resolves spontaneously and can thus be followed. Orbital intervention may become necessary if involvement of the frontal or ethmoidal sinuses leads to mucopyocele formation or if bony fragments impinge on the levator/superior rectus complex.

Complex and Apical Fractures

Le Fort II fractures extend through the maxillary and nasal bones in a pyramidal configuration and by definition involve the orbital floors. Le Fort III fractures separate the maxilla from the cranial bones in a line extending through the medial and lateral orbital walls. These are approached through combinations of bicoronal flaps and techniques described above for zygomatic fractures. Intraorbital bone fragments have been associated with high impact injuries.²² Direct injury to orbital structures can result and the fragments should be removed. Orbital apex fractures involving the sphenoid bone can encroach on the structures of the optic canal and superior orbital fissure. In these instances a transcranial approach is the most efficacious but should be reserved for well defined cases of bony impingement.

Conclusions

In summary, as assessment of facial trauma has improved with CT scanning and with better techniques of rigid fixation of complicated fractures, surgeons have tended to be more aggressive in their management of patients with facial trauma. Clearly, severe cases need to be operated on early although only cases of orbital fractures where the globe or optic nerve are threatened require surgery within hours. More typically the situation permits time to observe with sequential eye exams including forced ductions and binocular diplopia visual fields. As the substantial amount of orbital edema dissipates over the first four to seven days, the accuracy of the exam improves, the more common and self-limiting causes of ocular symptoms begin to resolve, and indications for surgery become better defined. If marked improvement is observed during this time or the ensuing two weeks, surgery can be postponed. Evidence of optic nerve injury or unstable neurologic status may delay surgical intervention into the orbit even further.

Furthermore, although repair of an orbital fracture may prevent progression of enophthalmos, it is difficult to fully correct existing enophthalmos and even more difficult to completely correct diplopia even when the entrapped tissue can be released. Diplopia in gaze other than those that are functionally

important should therefore not be the sole indication for surgery. Adjustable extraocular muscle surgery delayed for at least six months may offer a more safe and simple alternative or adjunct procedure.

Particularly in chronic cases the expectations of the orbital surgeon and the patient need to be realistic. Nevertheless when indications for surgery exist, delay may lead to diminished success rates and an increased potential for complications. More specific criterion for orbital fracture management await future carefully designed clinical studies. □

Orbital Infections

Abstract

The orbit, a bony cavity that contains the globe, the extraocular muscles, nerves, blood vessels and fat, is a closed space that is susceptible to infection. The reason for this susceptibility and the spectrum of clinical manifestations are related to the anatomical features of this region. The pathogenesis, clinical presentation, strategies for diagnosis, and management will be discussed. Prompt recognition and treatment may prevent blindness, intracranial complications and death.

Pathogenesis

Independent of the source of the infection, the anatomy of the periorbital region determines the pathogenesis. Direct spread from contiguous structures, hematogenous spread in septicemia, or implantation from external trauma can occur. Direct spread can arise from the sinuses, dental structures, lacrimal system or eyelids.^{1,2}

The orbit is composed of seven bones (Figure 1) that form the common walls of the orbit and paranasal sinuses. The ethmoid bone is particularly thin and porous, and presents little barrier to infection. Natural conduits include congenital defects and blood vessel foramina. The periosteum of these bones, known as the periorbita, and the orbital septum are important overlying structures that help to limit the spread of infection (Figure 2). The teeth are adjacent to the maxillary sinus; the lacrimal gland and ducts lie within a fossa in the lacrimal bone abutting the ethmoid sinus; and the lacrimal gland rests against the frontal sinus. The skin serves as an essential epithelial barrier.^{2,3}

The eyelid and orbit share a common vascular supply and drainage system. The superior and inferior ophthalmic veins pass through orbital fissures to the cavernous sinus. These valveless veins allow retrograde flow and hematogenous spread of infection from distant sites. In addition, anterograde spread to the cavernous sinus from superficial implantation or infection can occur.²⁻⁴

Spectrum of Disease

Orbital infections are often categorized by the extent of involvement. One widely used classification^{2,5,6} follows:

- Group I: Pre-septal Cellulitis
- Group II: Orbital Cellulitis

- Group III: Sub-periosteal Abscess
- Group IV: Orbital Abscess
- Group V: Cavernous Sinus Thrombosis

This simple classification, however, can be misleading:

1) The clinical presentation alone can be insufficient to classify the extent of disease (orbital imaging may be required),

2) Orderly progression from one stage to the next does not necessarily occur.^{1,5}

The clinical presentation, diagnostic evaluation and current management options will be discussed for each group.

Pre-Septal Cellulitis

Definition

Inflammatory edema confined to the eyelids (anterior to the orbital septum).

Clinical Presentation

Acute onset of swollen, tender and erythematous eyelids is classic. Lid swelling can be significant because of the loose attachment to the underlying structures and the compliant nature of the thin lid skin. The degree of swelling, however, is not predictive of infection severity or extent.^{1,2} Chemosis and injection of the conjunctiva are often present. Anterior abscess formation, a collection of purulence anterior to the septum, is possible. Fever, headache and a mildly elevated white blood cell count may occur. These signs, accompanied by malodorous breath, are suggestive of underlying sinus disease.^{3,4} By definition, orbital structures should not be involved. Extraocular motility and visual function should therefore be normal (Figure 3).

Diagnosis

The history should focus on potential risk factors: trauma, local infection, insect bites, rashes, recent upper respiratory infections and allergic exposure (Table 1). The latter is an important point of confusion—both type I and type IV allergic responses can result in inflammation and significant swelling of the eyelids. A history of antigenic exposure in conjunction with itching or eczematoid skin changes is suggestive of allergy. The associated swelling is often non-tender and very erythematous.⁶

Inspection of the lids and pressure over the lacrimal sac should be performed to determine if a local infection exists. Visual acuity, extraocular motility and position of

Table 2

Orbital Cellulitis Differential Diagnosis

- 1) Thyroid-associated ophthalmopathy
- 2) Idiopathic orbital inflammatory syndrome
- 3) Rapidly progressive tumors (rhabdomyosarcoma, lymphoma, leukemia)
- 4) Ruptured dermoid cyst
- 5) Orbital trauma

the globes in the orbit should be documented and followed throughout therapy.

Cultures of the conjunctiva, lids, nasal mucosa and pharynx are not helpful and are frequently misleading. A "cellulitis aspirate" (normal saline infected and withdrawn from the involved area) is never indicated.^{2,5}

Although a complete history and careful eye exam is usually sufficient to determine the extent of infection, a CT scan is indicated if there is any suspicion of posterior extension (Figure 4).

Children, especially those less than four years of age, deserve careful attention. A complete white blood cell count with differential and computed tomography (CT) scans should be obtained. Blood cultures should be performed if the white count is elevated.

Table 3

Bacteriology of Cellulitis in Children

- Hemophilus Influenzae*
- Streptococcus Pneumoniae*
- Moraxella Catarrhalis*
- Staphylococcus Aureus*
- Streptococcus Pyogenes*

A white count greater than 15,000, particularly in a child with violaceous swelling and a high fever, should alert the physician to possibility of *H. Influenzae* infection. Infants should have lumbar punctures performed to rule out meningitis.⁷⁻¹⁰

Management

Children should be imaged, admitted and treated with intravenous antibiotics until significant improvement occurs (usually < 72 hours) and then treated with oral antibiotics for a total 10 day course of therapy.⁸⁻¹⁰ Adults can be managed as outpatients on oral antibiotics unless they are diabetic, immunocompromised or have an unusual source of infection.^{1,2,11}

Initial antibiotic therapy is directed against *B lactamase* producing gram positive organisms (Tables 3 and 4). Failure to improve within the first 24 hours of therapy implies posterior extension of infection, abscess formation or atypical infectious agent(s) (Table 6). The latter is beyond the scope of this brief overview.^{2,12} The former mandate imaging.

Orbital Cellulitis

Definition

Diffuse inflammation, edema and infiltration that extends posterior to the orbital

septum without discrete abscess formation.

Clinical Presentation

The hallmark of posterior extension is dysfunction of orbital structures. Infiltration of the fat and extraocular muscles causes proptosis and limitation of ocular motility (Figure 5).

Inflammation or secondary compression of the optic nerve can result in decreased vision, altered color perception, an afferent pupillary defect and visual field abnormalities. Fever and malaise are common at this stage.^{2,3,11}

Table 4

Bacteriology of Cellulitis in Adults

Postseptal:

- Streptococci*
- Pneumococci*
- Bacteroides*
- Fusobacterium*
- Anaerobic Cocci

Trauma/Foreign Body:

- Staphylococcus Epidermis*

Figure 3a: Preseptal cellulitis secondary to allergic response.

Figure 3b: Preseptal cellulitis secondary to allergic response.

Figure 3c: Preseptal cellulitis secondary to chicken pox rash in a child.

Figure 3d: Preseptal cellulitis secondary to sinusitis with anterior abscess formation.

Diagnosis

The risk factors are the same as for preseptal cellulitis. Sinus infection is the most common inciting factor. Allergy is not a relevant consideration because allergic inflammation does not extend posterior to the orbital septum.^{3,5}

Orbital cellulitis is the leading cause of proptosis in children and the third leading cause in adults, behind thyroid-associated ophthalmopathy and idiopathic orbital inflammatory syndrome (Table 2). Although a complete history and eye examination can usually distinguish preseptal from postseptal involvement, early identification of an abscess is often difficult.^{2,3} Therefore, all patients with evidence of orbital involvement

Table 5

Antibiotic Recommendations

Oral

Adults: Augmentin 500mg TID x 10 days

Intavenous

Children: Cefuroxime (Zinacef)

100-200mg/kg divided TID x 10 days

Adults: Ampicillin/Sulbactam (Unasyn)

1.5-3gm QID x 10 days

should be imaged. The CT scan should include thin sections (2mm), coronal and axial views and bone windows (Figure 6).

Management

Prompt institution of intravenous antibiotic therapy is necessary. Single organism infections are thought to be more common in children less than 10 years of age (Table 3). Conversely, infections in older children and adults are more likely to be polymicrobial mixtures (Table 4).¹³ Infectious disease consultation should be pursued in difficult cases. Corticosteroids have no role in the management of orbital infections.^{1,6} A complete white blood cell count with differential and blood cultures should be obtained. Careful and frequent documentation of visual function should be performed. A team approach utilizing an internist/pediatrician, an ophthalmologist and an otolaryngologist is preferred.

Imaging should be repeated and surgical exploration performed if:

- 1) visual function deteriorates,
- 2) proptosis increases or becomes non-axial,
- 3) cranial III, IV, V or VI dysfunction develops,
- 4) mental status deteriorates,
- 5) a dental source is identified,
- 6) signs and symptoms fail to improve within 48 hours.

Subperiosteal Abscess

Definition

Collection of purulent material between a bony wall of the orbit (usually ethmoid) and the periorbital.

5b: Orbital cellulitis. Note the proptosis.

Figure 6a: Axial view of orbital cellulitis concentrated in the superior orbit.

Figure 6b: Coronal view of same patient.

Diagnosis

A CT scan with contrast is indicated to delineate the extent of abscess formation (Figure 7). Ultrasound (B-scan) is very helpful in identification of an abscess and can be used to follow progress during treatment.^{2,6}

Management

Although some authors have suggested observation for small abscesses in young children,¹³ loculated purulence responds best to drainage. The sub-periosteal space is avascular and therefore the penetration of antibiotic is questionable. Abscess drainage and sinus obliteration (e.g., ethmoidectomy) in conjunction with appropriate intravenous antibiotics are

usually curative. Cultures should be obtained from the sinus and abscess contents and used to modify the initial empiric therapy.^{1,11}

Orbital Abscess

Definition

Collection of purulent material posterior to the orbital septum.

Clinical Presentation

The presentation overlaps with that of orbital cellulitis and subperiosteal abscess. An

Clinical Presentation

The presentation is similar to orbital cellulitis, however non-axial proptosis is often present due to a lateral and inferior displacement produced by the position of the abscess. Rapid progression of proptosis or limitation of eye movement in one direction is very suggestive of subperiosteal abscess expansion.^{11,13}

Figure 7a: Coronal view of subperiosteal abscess extending from the ethmoid sinus.

Figure 7b: Coronal view of subperiosteal abscess extending from the ethmoid sinus.

Figure 7c: Axial view demonstrating superomedial extent.

increase in proptosis, limitation of extraocular motility, decrease in visual function or failure to respond to appropriate intravenous antibiotic therapy suggests orbital abscess formation.

Diagnosis

An orbital abscess is most consistently identified by CT scan. B scan ultrasound is also effective in trained hands.^{1,6} Some abscesses, however, can only be confirmed during surgical exploration. Associated organic foreign bodies may require magnetic resonance imaging to be located.^{1,2}

Management

Surgical evacuation of the abscess cavity and obliteration of the offending sinus should be performed. Intravenous antibiotic therapy for seven to 10 days, followed by a 10 day course of oral antibiotics is required. A complete white blood cell count and blood cultures should be obtained and followed to monitor response to therapy. Cultures obtained at surgery should be used to modify initial antibiotic therapy. Failure to recognize and drain an abscess can result in in-

tracranial spread with epidural abscess formation or cavernous sinus thrombosis.¹⁻⁴ (Figure 8)

Cavernous Sinus Thrombosis

Definition

Extension of infection into the cavernous sinus usually resulting in thrombosis.

Clinical Presentation

Increasing headache, fever, nausea and emesis usually accompany mental status deterioration. Occasionally, the ocular findings will occur alone initially. Development of cranial nerve III, IV, V, or VI dysfunction in a patient with orbital cellulitis is worrisome.^{1,2} External ophthalmoplegia of the opposite eye may occur. Most ocular motility abnormalities in the setting of orbital cellulitis are due to inflammation and infiltration of the extraocular muscles. Distinguishing the restrictive, mechanical process from cranial nerve impairment can be difficult. The pattern of the motility disturbance should be observed and forced ductions performed. New pupillary abnormalities (CN

III), increasing ptosis (CN III) or corneal anesthesia (CN V) are helpful if present.

Diagnosis

Imaging is the best method to determine the degree of orbital and intracranial involvement. Both a CT scan with contrast and magnetic resonance imaging (MRI) with contrast are required to evaluate this ominous development (Figure 12).

Management

Urgent neurosurgical consultation should be obtained. Intravenous antibiotics, abscess drainage and sinus obliteration

should be performed emergently. Adequate hydration is essential. The prognosis is guarded in all cases. Adequate early treatment to prevent progression is preferable.

Conclusions

The spectrum of orbital infections has been outlined. The overlapping clinical presentations can create diagnostic dilemmas. Early involvement of appropriate specialists, especially in young children, diabetics and the immunocompromised, may preserve vision, prevent intracranial spread and avoid fatalities. □

Figure 8a: Axial CT scan demonstrating extensive orbital cellulitis and abscess formation.

Figure 8b: Frontal sinus and intracranial extension (patient has had previous craniotomy an uninvolved side).

Figure 9: Axial CT scan demonstrates orbital apex involvement. An MRI would be indicated to evaluate intracranial extension and determine if cavernous sinus thrombosis is present.

Thyroid Orbitopathy

Graves' disease is characterized by the triad: diffuse goiter with thyrotoxicosis, infiltrative orbitopathy, and infiltrative dermopathy. In the individual patient, these three phenomena may occur together or singly, and can run variable and independent courses. Although the prevalence of Graves' disease is uncertain, it has been estimated to occur in .4% of the population in the United States.¹ The Wickham survey in England demonstrated a prevalence of 1.9-2.7% in women and 0.16-0.23% in men, with an overall prevalence of 1.1-1.6% in the combined population.² The disease occurs most commonly in women between 25-45 years of age. The mean presenting age for thyroid disease and orbital disease has been reported to be 41 and 44 years respectively.³

The autoimmune nature of Graves' thyroid disease and orbitopathy is universally accepted; however, the specifics of the process have not been fully elucidated. Both arms of the immune system, i.e., humoral and cell mediated immunity, have been shown to be involved. Specifically, immunoglobulins of the IgG class have been implicated in being directed against the thyroid cell plasma membrane possibly including the TSH receptor. By binding to the plasma cell membrane they activate adenylate cyclase, initiating a series of reactions that leads to the glandular growth and secretion of thyroid hormone. This IgG protein was designated as long-acting thyroid stimulator (LATS) and is demonstrable in 50% of patients with active Graves' disease. Currently, multiple other IgG antibody clones have been demonstrated in patients with Graves' disease which interact with the thyroid gland in a myriad of ways.¹

Attempts to discover similar specific antibodies in orbital tissues have proven to be both difficult and controversial. Some authors maintain that Graves' thyroid disease and Graves' orbitopathy are different manifestations of a single immune process, while others find the thyroid and extraocular antigens to be unique from one another.⁴⁻⁶

Much attention also has been directed to studying the T-cell changes apparent in Graves' disease. Studies have shown a decrease in CD8 (T-suppressor/cytotoxic) cells with an increase in the CD4(T-helper/inducer cell):CD8 ratio in patients with untreated Graves' thyrotoxicosis.^{7,8} Pa-

tients who had achieved euthyroid status following radioactive iodine treatment or PTU treatment, or who remained thyrotoxic following PTU therapy tended to show a partial normalization of their lymphocyte population. Wilson et al⁹ further demonstrated that following radioactive iodine treatment for hyperthyroidism, those patients who subsequently became hypothyroid had a tendency to show a rise in serum anti-TSH antibody. This was felt to be due to the apparent fall in T-suppressor cell number.

Patients with Graves' ophthalmopathy exhibit a variety of changes in the CD4 and CD8 lymphocyte populations, with both increased or decreased CD4:CD8 ratios.¹⁰⁻¹⁴ Bizzarro et al¹³ showed that if the euthyroid Graves' ophthalmopathy had been present for less than three years, then the CD8 level was diminished and the CD4:CD8 ratio was elevated; conversely, if the ophthalmopathy had been present for more than five years, then both the CD8 level and CD4:CD8 ratio were normal. This change over time was thought to represent a loss in orbital muscle mass from the destructive inflammation, with the consequent loss in muscle antigen.

Immunologic changes are thought to diminish the active T-suppressor population, resulting in the abnormal proliferation of plasma cell clones which produce autoantibodies directed against extraocular muscles. Immune complexes bind to the extraocular muscles which turns on the inflammatory process. Lymphocytes, plasma cells, and mast cells are attracted to the involved area. Plasma cells mediate the release of mucopolysaccharides and collagen formation by fibroblasts within the extraocular muscles.¹ Extraocular muscle enlargement can result in orbital congestion with resultant venous engorgement, chemosis and apical optic nerve compression.

Heredity plays a role in Graves' orbitopathy. Population studies have shown an increased frequency of the disease in haplotypes HLA-B8 and HLA-DR3 in Whites, HLA-BW46 in Chinese, and HLA-BW35 in Japanese patients. Additionally, a higher concordance rate of Graves' disease is noted among monozygotic twins than dizygotic twins.

Several studies have linked smoking to increased severity of Graves' orbitopathy. Shine et al¹⁵ showed that increased smoking was associated with increased severity of or-

Figure 1: Patient with thyroid orbitopathy presenting with severe proptosis and upper and lower eyelid retraction resulting in corneal exposure.

Figure 2: Axial CT scan demonstrating massive enlargement of both the medial and lateral recti resulting in optic nerve compression at the orbital apex.

bitopathy which he believed was possibly related to alterations in blood T-cell phenotypes and/or function. Prummel et al¹⁶ postulated that since smokers have been shown to have lower levels of T-suppressor lymphocyte activity and lower levels of immunosuppression, this results in less control of the naturally occurring clones of T-helper cells directed against thyroid and orbital antigens. Hughes et al¹⁷ showed that although moderate smoking is associated with a trend of increase in T-suppressor cells, these cells are impaired and less functional. Smoking is also known to increase production of acute phase reactants, complement components, anthracene derivatives and interleukin-1, as well as damage thyroid tissue directly by thiocyanates with release of thyroid autoantigens which can theoretically cross react with eye muscle antigens.¹⁵

The manifestations of Graves' disease include the following: nervousness, emotional

lability, tremor, weakness, fatigue, heat intolerance, sweating, dyspnea, palpitations, goiter, leg swelling, increased appetite, weight loss, and hair thinning.¹ The eye manifestations also are diverse and range from no signs or symptoms to complete loss of vision and tremendous facial disfigurement. The lids can be affected with swelling, lid retraction, lagophthalmos, and poor closure (Figure 1). When there is significant orbital infiltration and extraocular muscle enlargement, proptosis occurs, and corneal exposure may ensue. Muscle involvement

with restriction of motility can result in diplopia. CT scanning may demonstrate a thickening of the involved muscles. Most commonly the inferior and medial recti are involved, with resultant restriction of elevation and abduction. Posterior enlargement of the extraocular muscles at the orbital apex may compromise blood

flow and compress the optic nerve, resulting in an optic neuropathy which can be irreversible.^{3,18-21} (Figures 2 and 3)

The ophthalmic evaluation of patients with Graves' orbitopathy should include a complete ocular exam with special attention to measurement of proptosis, eyelid and corneal evaluation, motility and optic nerve functions. Color vision and field testing are very helpful in the diagnosis of early optic neuropathy. Elevation of intraocular pressure on upgaze can confirm inferior rectus restriction. CT scanning and MRI demonstrate the extent of the muscle enlargement and optic nerve compression, and are essential prior to decompressive surgery.

Reviews in the literature have noted that orbitopathy develops in 20-50% of all patients with Graves' thyroid disease.¹⁸⁻²⁰ This association may even be stronger if sensitive imaging techniques such as orbital ultrasonography and computerized tomography are employed.¹⁸⁻²⁰ Approximately 85% of

those who develop overt orbitopathy do so within 18 months of diagnosis of the thyroid disease.¹⁸⁻¹⁹ Tallstedt et al demonstrated a two to three times greater risk of developing orbitopathy when the thyroid disease was managed with radioactive iodine treatment as opposed to surgical or medical treatment.²² Fernandez et al reported a more significant

Figure 3: Coronal CT scan of the same patient as shown in Figure 2 demonstrating marked enlargement of the medial, inferior and lateral muscles resulting in congestion at the orbital apex.

improvement in the orbitopathy findings 12 months following a subtotal thyroidectomy compared to radioactive iodine treatment.²³

Management of the orbitopathy is greatly palliative and is performed to minimize pain, loss of vision, and disfigurement. The treatment armamentarium consists of observation alone, lubrication for corneal protection, steroids, radiation and surgery. When the patient is comfortable and demonstrates no evidence of corneal or optic nerve involvement, observation alone is necessary. Mild to moderate corneal involvement can be treated with lubricants and/or taping the eyelids at night. Severe corneal involvement may necessitate a bandage contact lens, tarsorrhaphy or decompressive surgery.

Acute inflammation, optic nerve compression or diplopia can be managed with either steroids or orbital radiation. Studies have compared these two alternatives. Prummel et al²⁴ reports in his study comparable results in 28 patients six months following initial treatment with either steroid or radiation treatment. The steroid treatment consisted of oral prednisone beginning with 60mg QD and tapering over a three-month period. The orbital radiation consisted of 10 sessions totaling 2000 cGy. The disadvantages of steroid use were the numerous side effects including weight gain, depression, zoster recurrence, hypertension, gastritis, hirsutism, behavioral changes, and cushingoid facies. The only side effects associated with orbital radiation consisted of mild weight gain, gastritis, and transient hair loss at the temples; however, there remains the risk of possible future malignancies at the radiated site. Lloyd et al reported that 33 of 36 patients who were treated with orbital radiation (2000 cGy) were improved and stabilized; the remaining three patients required further immunosuppression.²⁵ Kao et al²⁶ reported no appreciable difference apparent with CT imaging of extraocular muscles one year following radiation treatment compared to no radiation treatment. Once the disease is stabilized—whether by itself, with radiation therapy, or steroids—surgical rehabilitation can proceed. Except for cases of acute visual loss secondary to optic nerve compression not responsive to steroids, surgery is rarely done in the evolving inflammatory stages of the disease.

Patients with thyroid orbitopathy can be divided into those with proptosis, lid retraction, periorbital swelling and good motility

Figure 4: Pre-operative photo of a patient with thyroid orbitopathy presenting with proptosis and lower lid retraction resulting in corneal exposure.

Figure 5: Same patient as shown in Figure 4 following an anterior bony decompression through the inferior fornix and recession of lower lid retractors.

with no restrictive myopathy (Type 1) versus those with severe extraocular muscle involvement leading to chemosis, diplopia and optic nerve compression (Type 2). Unlike women, men rarely develop thyroid orbitopathy; however, if they do they usually fall within the Type 2 group. Both groups of patients have an acute phase which lasts three to 12 months and can occasionally recur. Once the disease has stabilized, residual proptosis, diplopia, and eyelid retraction persist in some degree due to cicatricial changes.

Surgical rehabilitation needs to be individualized to each patient and performed in a staged manner. If decompression is necessary it should be done first, followed by muscle and then eyelid surgery. The extent of decompressive surgery can range from fat removal to anterior or apical posterior bone removal. The larger and more posterior the decompression the more likely the complications of diplopia and visual loss. Indications for orbital decompression include proptosis with corneal decompensation and facial disfigurement, severe lower eyelid retraction, subluxation of the globe and optic nerve compression.

Historically, each of the four walls that surround the globe have been removed, performing an orbital decompression.²⁷⁻³³ The two-wall decompression, either through the lower fornix or the transantral Caldwell-Luc approach, are most commonly done. The removal of the lateral wall allows additional expansion. The four-wall decompression of Kennerdell-Maroon is reserved for severe exophthalmos.

A fatty decompression is indicated for minimal proptosis and involves extensive removal of orbital fat through lower and upper eyelid approach.^{34,35} This can be done under local anesthesia and does not involve bony removal. Extraocular motility is not usually affected. An anterior bony decompression is usually performed through an inferior fornix approach. It is indicated for moderate proptosis without optic nerve compression and can be combined with resection of the lateral wall for greater reduction of exophthalmos (Figures 4 and 5). The inferior fornix approach offers good visualization of the anterior orbital floor, including the infra-orbital nerve. Lid surgery can be done at the same time, including lid tightening, skin removal, recession of retractors and excision of anteriorly prolapsed fat. The disadvantages of this approach are poor visualization

Figure 6: An oxil CT scan demonstrating a posterior medial bony decompression with displacement of the medial rectus into the ethmoid sinus.

posteriorly and medially; retraction of the globe increases orbital pressure; and if the opening lid incision is not closed properly eyelid malpositions can result, with scar formation and poor eyelid closure. The posterior medial wall orbital decompression through a Caldwell Luc approach is indicated for severe proptosis, especially if optic nerve compression is present (Figure 6). The advantages of this approach are good visualization of the posterior medial wall, no traction on the orbital contents, and minimal post-operative orbital and eyelid swelling. The disadvantages include poor visualization of the anterior orbital floor, lower eyelid malpositions must be corrected separately, greater risk of post operative sinus infections and oro-sinus fistulas especially in patients with dentures. An endoscopic transnasal approach has recently been described and is particularly good for posterior medial wall decompression.³⁶

The risks of decompression surgery include blindness, hemorrhage, CSF leak, diplopia, lid abnormalities, asymmetry, and infraorbital nerve hypesthesia. A review of 428 patients at the Mayo Clinic who had undergone transantral decompressions showed an improvement in vision in 65% and a decrease in 12%. New diplopia was found in 64%, entropion in 9%, CSF leak in 3.5%, and significant blood loss requiring a transfusion in 2.5%. Three percent needed an additional decompressive surgery. The decision when to perform and the extent of decompressive surgery is a matter of con-

siderable debate. Some choose to operate only when the optic nerve is compromised and medical treatment has failed,³⁷ while others advocate cosmetic decompressions.³⁸ The benefits achieved and the side effects incurred must be carefully balanced for each patient, especially if a posterior decompression is contemplated.

The loss of elasticity and fibrosis of muscles, combined with scarring from decompressive surgery, can result in restrictive motility. It may be impossible to restore single vision in all fields of gaze and the goal of strabismus surgery is to allow the greatest range of fusion in both the primary and reading positions. Careful counseling of the patient in this regard cannot be overemphasized. The patient must be stable prior to proceeding with muscle surgery. Fresnel prisms and occlusion by patching or contact lens can be used while the motility is still evolving. Once the situation is stable recessions of the involved restricted muscles can be performed using adjustable sutures. Superior oblique tenectomies or tenotomies may be necessary in patients with intorsional diplopia and A pattern exotropia following large inferior rectus recessions.³⁹

Eyelid malpositions and malfunction can include lid retraction, entropion, ectropion, ptosis, lagophthalmos and poor lid closure. The lid deformities can be due to the disease itself; however, they also can be the result of decompressive and extraocular muscle surgery. Advancement of the capsulopalpebral head when doing large inferior rectus recessions minimizes postoperative lower lid retraction.⁴⁰ Decompressive surgery can improve lower eyelid retraction; however, it can make upper eyelid retraction worse. The recession of the fibrosed and shortened levator-Müller's muscle complex of the upper eyelid can be performed with or without

spacer material depending on the severity of the retraction. In contrast to the upper eyelid, where it is almost always possible to correct retraction without a spacer, the lower eyelid often needs spacer material such as cartilage, fascia, buccal mucosa or hard palate grafts in order to achieve good lid position. Good lid function and closure is imperative to corneal well-being and in

Figure 7: A patient presenting with acute orbital congestion, chemosis, inability to close the eyelids, and optic nerve compression secondary to thyroid orbitopathy. In addition to intravenous high dose steroids, this patient needed posterior orbital decompression to preserve vision.

certain situations when definitive treatment is not possible, a tarsorrhaphy can be performed to stabilize the situation.

In conclusion, Graves' orbitopathy poses difficult and challenging problems to the patient and treating physician. Its presentation and course are both complex and variable, so treatment considerations and approaches must be individualized. Steroids and radiation can be used to decrease the inflammatory response and can be especially helpful in cases of optic nerve compression. Surgical

decompression is acutely necessary in certain cases of severe orbital congestion, proptosis and optic nerve compression (Figure 7). Ideally, surgical rehabilitation should be postponed until the disease is stable and then performed in a staged manner with decompressive surgery first, followed by extraocular and eyelid surgery. The need for multiple procedures and their risks must be carefully explained to the Graves' patient prior to embarking on the long crusade towards surgical rehabilitation. □

Management of Eyelid Lacerations

Eyelid and adnexal injuries may be isolated or accompany severe ocular or systemic injuries. Life-threatening injuries must be evaluated and treated with priority. Once involved, the primary concern of the ophthalmologist is assessment of the ocular system and protection of the eye. Visual acuity, as well as evaluation of the pupils, motility, cornea, anterior chamber, intraocular pressure, and fundus are mandatory. Once the patient's general health and ocular status is stable, evaluation and treatment of eyelid and adnexal injuries may proceed.

A careful history regarding the force and type of trauma is important. Appropriate radiologic evaluation for possible foreign bodies or fractures is appropriate. Primary repair of adnexal injuries is preferred, but repair may be delayed for days if systemic trauma, local tissue edema, hematoma, or infection precludes initial repair. Post-traumatic eyelid deformities may occur in any repair, but can be minimized with precise three-dimension closure of the wounds in horizontal, vertical, and anterior-posterior planes.¹ Removal of foreign material, replacement of avulsed tissue, and prevention of infection, helps yield the best functional and cosmetic results.

Surgical Anatomy

The eyelid's primary purpose is to provide protection to the globe. The eyelid must be able to move unrestricted constantly and lubricate the cornea from the secretions of tear producing glands, as well as close completely to prevent corneal exposure. The surgeon must possess a thorough knowledge of eyelid anatomy and physiology.^{2,3} The eyelids are complex and possess from four and up to seven layers, depending on the site. At the eyelid margin, from anterior to posterior, the skin, orbicularis muscle, tarsal plate, and conjunctiva are present. Above the upper lid crease, the skin, orbicularis muscle, orbital septum, orbital fat, levator aponeurosis, Müller's sympathetic muscle, and the conjunctiva are present (Figure 1).

The tarsus—a dense, fibrous tissue—forms the rigid structural framework of the posterior lamella of the lids. It runs 25mm in length and 10mm in height in the upper lid and 4mm in height in the lower lid. It is indirectly anchored to the medial and lateral orbital walls through its attachments to the pretarsal orbicularis muscles and their canthal

tendons. Posteriorly the tarsus is firmly attached to the conjunctiva, giving it a smooth mucous membrane lining. Anteriorly, the tarsal portion of the eyelid is covered with the anterior lamella of the lid, the orbicularis muscle and thinnest skin of the body.

The eyelid margin contains several anatomic landmarks. The lashes arise from the anterior lamella and are the most anterior landmark of the margin. The gray line, visible in most patients, represents a small section of the orbicularis muscle, and separates the lamellae. The meibomian (sebaceous) glands of the tarsus open posterior to the grayline, while the mucocutaneous junction comprises the most posterior portion of the eyelid margin.

The medial one-sixth of the lid margin is specialized and contains the beginning of the lacrimal drainage system (Figure 2). The pretarsal and preseptal orbicularis muscles have superficial and deep heads which are important in the lacrimal pump system. The 0.3mm punctum are in the center of the elevated lacrimal papillae on the lid margin. This opens into the canaliculus, which courses 2mm vertically, dilates, then proceeds 8mm to the common canaliculus, then into the lacrimal sac. The canaliculus initially is very superficial along the lid margin, before traveling posterior to the superficial head of the medial canthal tendon.

The levator superioris palpebrae is the main retractor of the upper eyelid and is responsible for lid elevation. The aponeurotic portion of the muscle has multiple attachments to the tarsus and the orbicularis muscles. Above its fusion with the orbital septum, the preaponeurotic (central) fat pad separates the two and is an important landmark.

Eyelid Laceration Repair

Anesthesia

General endotracheal anesthesia is necessary in children, especially if a thorough evaluation of the globe cannot be performed. Local infiltration of 2% lidocaine with epinephrine is preferred for most isolated non-canalicular eyelid lacerations. Local infiltration may be undesirable in canalicular lacerations, as edema may interfere with the identification of the proximal lacerated epithelial opening.

Partial thickness lacerations

Even a minimal partial thickness skin laceration may be accompanied by an occult

foreign body or globe perforation. Suspicion is the key to proper diagnosis. Wound debridement should be kept to a minimum. The eyelid has excellent blood supply and usually allows preservation of apparently devitalized tissue. When simple lacerations of the skin and orbicularis muscle only are present, repair depends on the orientation and location of the injury. Contracture of the orbicularis will occur in vertical lacerations, creating tension, and may distort the wound, giving the appearance of tissue loss. Closure involves the placement of interrupted 6-0 nylon sutures or absorbable sutures in children. When tension is likely, sutures should be placed to create horizontal tension to decrease the possibility of later scarring with secondary lid margin or lid closure abnormality. A second layer of small, absorbable, horizontal interrupted sutures can be placed at the level of the orbicularis muscle.

Deeper, non-marginal eyelid lacerations require exploration. Deeper tissues must be examined for foreign bodies and anatomic landmarks. Copious saline irrigation is helpful. Severe injuries to the globe, extraocular muscles, and orbit are more likely, and must be ruled out. If yellow orbital fat is present, the orbital septum has been violated and deeper exploration is mandatory. The levator aponeurosis should be explored, preferably under local anesthesia. An eyelid crease incision may be necessary for proper exposure. If significant horizontal or tangential lacerations are present, they should be repaired with 5-0 polygalactin 910 (vicryl) interrupted sutures to avoid ptosis. Late repair is very difficult and often has less than ideal results. Lacerations of the orbital septum should not be sutured in order to avoid scarring and postoperative contracture, lid lag, and lagophthalmus with subsequent exposure keratopathy. In extensive injuries, excision of a portion of the eyelid septum may be appropriate.

Full thickness margin lacerations

Eyelid margin lacerations require precise suture placement and tension to avoid notches in the margin and secondary tearing and trichiasis. Many techniques have been described and work well. The most important principles include a meticulous margin closure that results in a moderate eversion of the well approximated wound edges, and elimi-

Figure 4: Probing confirms a full thickness conolcular laceration.

nation of horizontal tension through secure tarsal repair. Scar contracture will flatten the lid margin during postoperative healing.

The tarsus should be closed first to avoid tension on the lid margin. A traction suture may be utilized through the grayline or lash line of each side of the laceration to place the lid on vertical traction to help judge alignment. Depending on the amount of tension, 4-0 to 6-0 vicryl sutures are placed through orbicularis muscle and two-thirds thickness of the tarsal plate, avoiding the posterior conjunctival surface (Figure 3). If a large amount of horizontal tension exists, a lateral canthotomy and possibly a cantholysis is performed with sharp dissection to release the lid's lateral bony attachment. The lateral canthal tendon is severed by a straight cut with scissors horizontally toward the orbital rim (canthotomy). The inferior or superior crus is then severed directly, allowing the lid to slide toward the medial canthus (cantholysis). The knots will be tied and cut on the anterior surface of the tarsus to avoid corneal irritation.

The eyelid margin is repaired with 5-0 or 6-0 silk or nylon in adults and vicryl in children. The purpose of the margin sutures are for contour, not for tensile strength. A suture is placed through the lash line. After it is tied, the ends are left long. A mattress suture is also placed near the meibomian gland orifices into the tarsus, which will evert the lid margin. This also is tied with long ends. An optional third margin suture may be utilized. The adjoining skin and muscle lacerations are then repaired as described above. The long ends of the lid margin sutures are incorporated into the two nearest skin sutures and then trimmed. The skin sutures are removed in five to seven days and the lid margin in 10 to 14 days.

Canalicular lacerations

Lacerations near the medial canthal angle or medial to the punctum demand evaluation of the lacrimal drainage apparatus and damage should be assumed until proven otherwise. Canalicular lacerations usually are avulsions of the lid, commonly seen in injuries where the eyelid is stretched against its fixed tendinous attachments such as falls and bites. The canalicular portion contains less connective tissue and is the weakest portion of the eyelid. The distal canaliculus is very superficial along

the lid margin and even trivial injuries may lacerate the canaliculus. Passing of a probe through the lacrimal punctum is mandatory to evaluate integrity of the canalicular system (Figure 4). Full thickness medial canthal injuries as a rule will involve a canalicular laceration.

Some controversy exists regarding the repair of an isolated upper lid canalicular laceration. Clinical and research studies have shown that the upper system is important in normal lacrimal drainage.⁵

The experienced surgeon will achieve greater than 90% functional success, and since most patients are in a young age group, repair of any upper or lower canalicular laceration is usually indicated. However, if the surgeon is not familiar with canalicular repair, or other injuries or factors preclude meticulous repair, it is best to do an adequate repair of the eyelid margin, since inadvertent damage may occur to the opposite or common canaliculus with aggressive exploration.

An operating microscope is helpful to locate the proximal cut edge of the canaliculus. The more medial the laceration, the more difficult the exploration. The distal cut end is easily identified by inserting a probe through the punctum. The proximal cut end is more difficult to locate and can usually be found with blunt dissection and retraction utilizing cotton swabs and forceps. The caruncle is gently retracted vertically to help expose the canaliculus in medial lacerations. The cut epithelial edge will appear white with rolled edges ("fish mouth") and be located deep to the medial canthal tendon when located close to the sac. Occasionally, fluorescein-stained viscoelastic may be irrigated through the opposite canaliculus and observed to locate the proximal cut end. Once located, the opening can be enlarged with a lacrimal dilator.

Intubation of a silicone stent is the standard of modern canalicular repair. The smooth surface of silicone allows for migration and epithelialization of the lacerated canalicular walls. Both monocanalicular and bicanalicular intubations are widely utilized. Monocanalicular stents allow repair of the laceration under local anesthesia, and is simpler to utilize since no nasal anatomy knowledge or manipulation is required. However, extrusion is more common and long-term success may not be as high as

Figure 5a: Complex canthal, canalicular, and eyelid laceration.

Figure 5b: Bicanalicular silicone intubation.

Figure 5c: Final appearance following medial canthal fixation, canthal reconstruction, and laceration repair.

with bicanalicular repair. Bicanalicular intubation requires more technical expertise and usually requires general anesthesia, but allows easier retention of the tube for many months, a high success rate, and is especially helpful in children. An end is passed through each canaliculus, into the lacrimal sac, down the nasolacrimal duct and retrieved under the inferior turbinate with a grooved director or small hemostat. The two ends are secured to each other. Once in place, gentle tightening will help place the lid in its anatomic position to plan the repair of the laceration (Figure 5).

Some surgeons utilize microscopic canalicular wall or pericanalicular sutures repair with 8-0 to 10-0 sutures. However, stable reapproximation of the eyelid and medial canthus is of greater importance. Eyelid fixation is imperative and will appose the silicone intubated canalicular ends together to allow epithelialization. Without proper and strong lid laceration repair, microscopic reapproximation of the canaliculus is futile. The anterior or posterior limbs of the medial canthal tendon, or both, may require repair. Periosteal fixation is mandatory to insure firm eyelid apposition to the globe, avoiding later ectropion and punctal malposition.

Extensive injuries

Primary closure of lid lacerations may not be possible. If canthotomy or cantholysis is insufficient, more complex eyelid reconstructive techniques may be required. The use of local flaps, especially laterally, may be necessary to allow closure of the anterior defect, while canthal fixation, periosteal flaps, or tarsal substitutes may be necessary to stabilize the posterior lamella. If non-marginal skin loss is present, sliding flaps, preferably with incisions placed in the eyelid crease or in a blepharoplasty configuration can be utilized. The use of extensive flaps should be minimized in acute trauma, especially in dirty wounds. Granulation should be monitored closely.

If extensive partial or full thickness eyelid avulsion is present, every effort should be made to retrieve the tissue from the scene of trauma. If not frankly necrotic, the tissue should be replaced (Figure 6). Layer by layer closure is performed, keeping in mind the three-dimensional relations of the layers of the lid, as well as its vascular components. The tissue will frequently survive because of the excellent vascularity of the lid. If the avulsed tissue is not available, complex reconstructive tech-

niques may be required. Flaps are usually preferred for initial coverage to allow lid closure, or even purposeful closure of the lids over the cornea may be necessary, with flaps or a tarsorrhaphy. Initial full thickness skin grafting is avoided. Later reconstruction is planned under controlled conditions and performed as an elective procedure.

Bites

Animal and human bites create tearing and crushing injuries. Margin lacerations, canthal avulsions, and canalicular lacerations are common. Serious facial and intracranial injury is possible, especially in infants, as hundreds of pounds per square inch of force are generated.⁶ Saline irrigation and early wound repair is desired. Standard tetanus or rabies considerations are appropriate.

Post-operative care

Topical antibiotic-steroid ointment prevents infection and softens exudate along wound edges and sutures. Systemic antibiotics are recommended for extensive or obviously contaminated wounds, human bites and in most dog bites. Beta-lactamase producing bacteria should be inhibited. A firm dressing is usually placed and a protective eye shield. Close monitoring is mandatory. The need and timing of secondary reconstruction is dependent on the corneal status, lid edema, residual inflammation, and wound contracture, as well as secondary exposure, ectropion, entropion, trichiasis, and distichiasis. □

Figures 6a and 6b: Seven-year-old with total eyelid avulsion secondary to dog bite.

Figure 6c: Eyelid repaired with layered reconstruction, bipedicle orbicularis muscle flap, and canthal fixation.

Figure 6d: One month post-operative.

Staff

Executive Director	Linda L. Koval
Administrative Secretary	Crystal M. Morret

Active Members—Physicians (MDs or DOs) who hold a full and unrestricted license to practice medicine in Pennsylvania, whose residence and/or primary practice is in Pennsylvania, and whose practice of medicine has been limited to the specialty of ophthalmology for at least two years from the completion of residency or fellowship training in ophthalmology.

Associate Members—Physicians who are otherwise qualified for Active membership but who are practicing in ophthalmology for less than two years from the completion of their residency or fellowship training in ophthalmology.

Retired Members—Physicians who have been members of the Academy or its predecessor, The Pennsylvania Academy of Ophthalmology & Otolaryngology for at least 20 years, who have reached the age of 65, and who are no longer engaged in the active practice of medicine.

Out-of-State Members—Physicians who are otherwise qualified as Active members, but whose residency and primary practice is outside of Pennsylvania.

Members-in-Training—Physicians licensed to practice medicine in Pennsylvania while engaged in their residency or fellowship training in ophthalmology.

Honorary Members—Persons who, in the sole discretion of the Academy, have demonstrated exceptional and meritorious contributions to ophthalmology.

ALPHABETICAL LISTING OF MEMBERS

The notation of a subspecialty has been designated by each individual member. The Pennsylvania Academy of Ophthalmology, in producing this directory for the convenience of its members, does not assume any responsibility for review of credentials or skills of any member.

Comments/Suggestions

The Pennsylvania Academy of Ophthalmology welcomes your comments and suggestions on
Current Concepts in Ophthalmology.

Please fax or mail this survey to: The Pennsylvania Academy of Ophthalmology • Attn: Linda Koval • 777 East Park Drive •
P.O. Box 8820 • Harrisburg, PA 17105-8820 • (717) 558-7750 • FAX (717) 558-7841

The goal of this annual publication is to provide a helpful, clinical update on ophthalmology to non-ophthalmologists.
Please give us your comments and suggestions.

Overall:

- ☐ I found the publication helpful.
- ☐ I found the publication interesting, but not really applicable to my specialty.
- ☐ I had no interest in the publication, because: _____
- _____
- _____
- _____

Specifics:

- | | | |
|--|------------------------------|-----------------------------|
| The articles were well-written. | ☐ Yes | ☐ No |
| The information contained in the articles was clinically useful. | ☐ Yes | ☐ No |
| I intend to keep the publication for reference. | ☐ Yes | ☐ No |
| I will pass it along to colleagues. | ☐ Yes | ☐ No |
| I am interested in receiving future issues. | ☐ Yes | ☐ No |
